The full range of Survey publications is available from the BGS Sales Desks at Nottingham, Edinburgh and London; see contact details above or shop online at www.geologyshop.com

The London Information Office also maintains a reference collection of BGS publications, including maps, for consultation.

The Survey publishes an annual catalogue of its maps and other publications; this catalogue is available from any of the BGS Sales Desks.

The British Geological Survey carries out the geological survey of Great Britain and Northern Ireland (the latter as an agency service for the government of Northern Ireland), and of the surrounding continental shelf, as well as its basic research projects. It also undertakes programmes of British technical aid in geology in developing countries as arranged by the Department for International Development.

The British Geological Survey is a component body of the Natural Environment Research Council.

PREFACE

This volume is the latest in the series *World Mineral Production*, published by the British Geological Survey. It comprises the most recent addition to a continuous dataset on global mineral production which stretches back to 1913, which includes the preceding titles *World Mineral Statistics* and *Statistical Summary of the Minerals Industry*.

This publication is compiled from a comprehensive database, maintained by the British Geological Survey, through which we aim to provide a reliable, comprehensive and continuous set of data covering most of the minerals that enter international trade. In this volume we have set out the production figures by country for more than 70 mineral commodities, over the five-year period from 2006 to 2010. The objective of this series remains to present the latest production information obtained from official bodies in individual countries, although other sources are also used to ensure completeness and accuracy. The cooperation afforded to the British Geological Survey by numerous national and international organisations is gratefully acknowledged.

The reported statistics for 2010 reveal a mixed picture, with many commodities showing a clear recovery from the global recession while others do not. For example the world's production of potash, lithium and bromine in 2010 was similar to the output levels from 2008 despite sharp falls in 2009. In contrast global production of bismuth, bentonite and graphite fell by a further five per cent each in 2010 compared to 2009, in addition to reductions of 20 per cent, nine per cent and eight per cent respectively in the previous year. For other commodities production increases in 2010 are much greater than the corresponding falls in output in 2009 resulting in overall production levels that are significantly higher than 2008. For example, the world's production of chromium ores and manganese ores rose by 28 per cent and 26 per cent respectively, more than reversing the falls of one per cent and 11 per cent experienced in 2009.

The security of supply of many minerals remained a concern during the year. The European Union issued an update to their

Raw Materials Initiative in February 2011 which attempts to move from identifying the critical minerals to proposing a series of actions intended to address the identified supply issues. In May 2011, the United Kingdom Government's Science & Technology Committee published its report into *Strategically Important Metals* and concluded that although these metals are unlikely to run out over the coming decades there remain geopolitical risks surrounding the availability of supplies which may affect UK businesses. In December 2011 the United States' Department of Energy updated their *Critical Materials Strategy* which identifies the risk of supply disruption for certain materials used in clean energy technologies.

The interest generated by these documents has created many opportunities for new research, collaboration between agencies and co-ordination networks to underpin strategies to improve security of supply. These strategies are based on three main themes: the diversification of supply sources; substitution and improvements in resource efficiency; and recycling. The availability of data, such as provided by this volume, is a vital part of this ongoing work.

In an attempt to improve data coverage for some of the rarer metals, which are so important for the latest technologies, this volume includes, for the first time, production data relating to indium and rhodium. We have also added some information relating to gallium. Accurate data for these metals are difficult to obtain and as a consequence many figures are estimated. We intend to seek opportunities to improve the accuracy of these data in future years. In addition to our regular publications, we are continuing to add to our *Mineral Profile* series with the addition of *Tungsten* and *Tantalum and Niobium* in 2011, together with updates to *Fluorspar* and *Rare Earth Elements*.

I would welcome any criticisms and suggestions that might help us to meet your changing needs, particularly with respect to the coverage of statistics and the format in which they are made available.

John N Ludden

EXPLANATORY NOTES

Coverage

World Mineral Production covers the majority of economically important mineral commodities. For each commodity constant efforts are made to ensure that as many producing countries as possible are reported. For some commodities, where statistics on production are not publicly available, estimates are made. Users of this compilation are advised that more statistical information than can be included in a publication of this nature is held in the British Geological Survey files and is available for consultation. Historical data (1913-1970) can be obtained from the predecessors to this series entitled *World Mineral Statistics* and the *Statistical Summary of the Mineral Industry*. Many copies of these publications are available in the World Archive section of the website: www.mineralsUK.com.

Arrangement of countries

Countries are ordered alphabetically in geographical groupings as follows:

Europe
Africa
North and Central America, including the Caribbean
South America
Asia
Australasia, including the Pacific Islands

So far as possible the nomenclature follows the London Diplomatic List.

Metals

Mine production of many metals is expressed in terms of metal content. This is clearly indicated at the head of the table, adjacent to the unit used. For aluminium, cobalt, copper, iron, lead, nickel, tin and zinc, mine production and metal production are shown in separate tables. Unless otherwise specified, metal production statistics relate to metal recovered from both domestic and imported materials, whether primary or secondary, but exclude remelted material.

World totals

For certain minerals and metals no world total is shown due to the non-availability of certain individual country totals.

Exclusion of Warranty

Use by recipients of information provided by the BGS, is at the recipients' own risk. BGS has taken care to ensure that information provided is as free from error as is reasonably practical. In view of the disparate sources of information at BGS's disposal, including such material donated to BGS, that BGS accepts in good faith as being accurate, the Natural Environment Research Council (NERC) gives no warranty, expressed or implied, as to the quality, accuracy, performance, and merchantability of the information supplied, or to the information's suitability for any use whether made known to BGS or otherwise. NERC/BGS accepts no liability whatever in respect of loss, damage, injury or other occurrence however caused.

Acknowledgements

Compilation of this volume of mineral statistics has been possible only by obtaining information from a very large number of organisations throughout the world, chiefly home and overseas government departments and specialist national or international authorities concerned with particular sectors of the minerals or metals industries. To all these bodies the

British Geological Survey expresses its grateful acknowledgement for the information made available, whether in published form or provided by direct correspondence. Particular acknowledgement is made to the Mines Departments and other government agencies of many countries whose regular statements, yearbooks and other reports are worthy of direct consultations by readers in search of detail.

Specialist commodity organisations which have kindly allowed information to be reproduced include the International Copper Study Group, the International Lead and Zinc Study Group, the International Nickel Study Group, the Barytes Association and the International Fertilizer Industry Association Ltd. In a few instances, information on specific commodities has been obtained directly from company sources. The co-operation of other members of the International Consultative Group on Non-Ferrous Metal Statistics is also gratefully acknowledged.

Supplementary information is also obtained from publications dealing with a wider range of commodities such as Société de l'Industrie Minérale, *Annuaire Statistique Mondial des Minéraux et Métaux*; World Bureau of Metal Statistics, *World Metal Statistics* and, *Metallstatistik*; publications of the Interstate Statistical Committee of the CIS, the United States Geological Survey, and UN agencies.

In addition, information has been obtained from the websites of the following organisations, companies, statistical offices and government departments: United Nations; Kaolin & Plastic Clays Europe; International Iron and Steel Institute; Kimberley Process; Eurofer; World Nuclear Association; Organisation of the Petroleum Exporting Countries; Eurostat; European Aggregates Association; Instituto Latinoamericano del Fierro y el Acero; RNC Gold; Glencairn Gold; Glamis Gold; Goldcorp; Break Water Resources; Inmet Mining; Stillwater Mining; Aluminium de Greece; New Boliden; Eurozinc Mining Corporation; Norilsk Nickel; Qatar Steel Company; Iamgold Corp, Lundin Mining; Norilsk Nickel; Xstrata; Anglo American; Rio Tinto; Aura Minerals Inc; Breakwater Resources; Institute of Argentinean Petroleum and Gas, Argentina; Institute of Argentinean Steel, Argentina; Aceros Argentinos; Northern Territory Government, Australia; Department of Primary Industries Victoria, Australia; Mineral Resources Tasmania, Australia; Australian Bureau of Agricultural & Resource Economics; Vereinigung der Österreichischen Zementindustrie, Austria; Energy Bangla, Bangladesh; Petrobangla, Bangladesh; Central Bank of Barbados; Federation de l'Industrie Cimentiere Belge, Belgium; Statistics Belgium; Instituto Nacional de Estatística Bolivia; Cámara Boliviana de Hidrocarburos, Bolivia; Ministry of Mining and Metallurgy, Bolivia; Republika Srpska Institute of Statistics, Bosnia & Herzegovina; Departamento Nacional De Producao Mineral, Brazil; Grupo Paranapanema, Brazil; Agencia Nacional do Petróleo, Brazil; Associação Brasileira do Alumínio, Brazil; Ministerio de Minas y Energía, Brazil; Sindicato da Indústria Carbonífera de Santa Catarina, Brazil; Natural Resources Canada; Statistics Canada; Canadian Association of Petroleum Producers; Mineral Resources of Quebec, Canada; Chilean Copper Commission; National Service for Geology and Mining, Chile; China Mining Association; National Bureau of Statistics, China; Ministerio De Minas Y Energía, Columbia; Unidad de Planeación Minera Energética, Columbia; Central National de la Statistique et des Etudes, Economiques, Republic of Congo; Oficina Nacional de Estadísticas, Cuba; Czech Republic Statistical Office; Statistics Denmark; Danish Energy Agency, Denmark; Banco Central de la Republica Dominicana,

Units

The Statistics shown in this volume are expressed in metric units. The following factors are given for converting to non-metric units:

tonnes $\times 0.9842$ = long tons
tonnes $\times 1.1023$ = short tons
kilograms $\times 2.2046$ = pounds
kilograms $\times 32.1507$ = troy ounces
cubic metres $\times 35.3147$ = cubic feet
1 tonne of crude petroleum equals on average 7 barrels of crude petroleum.
1 flask mercury = 34.5 kilograms
1 metric ton unit = 10 kilograms

Note(s)

- (1) Bentonites consist of montmorillonite (one of the smectite group of clay minerals) and occur in two main varieties, calcium bentonite, the most commonly occurring, and sodium bentonite, industrially the more important
 - (2) Calcium bentonite can be converted to sodium bentonite by a sodium-exchange process
 - (3) In some countries, such as the United Kingdom, calcium bentonite is known as fuller's earth, a term which is also used to refer attapulgite, a mineralogically distinct clay mineral but exhibiting similar properties
 - (4) In addition to the countries listed, Austria is believed to produce bentonite and France may produce fuller's earth
- (a) Including attapulgite and sepiolite
 (b) Years ended 30 June of that stated

Note(s)

- (1) The figures in this table are in some instances derived from reported bismuth content of refined and impure metal plus recoverable in ores and concentrates exported
- (2) Production for some countries may include bismuth produced from imported ores but it is thought that any resulting duplication is insignificant in the countries shown
- (3) In addition to the countries listed, Brazil is believed to produce bismuth

Note(s)

(1) There is no international agreement as to the separate definition of lignite and brown coal. In some cases they are distinguished. Elsewhere both may be aggregated under one or other term

- (a) Coal; all forms
- (b) Spitzbergen: not including production from mines controlled by Russia
- (c) Including brown coal
- (d) Excluding production in Kosovo
- (e) Including anthracite
- (f) Includes a small amount of refuse recovery
- (g) Including beneficiated and directly shipped material
- (h) Years ended 30 June of that stated
- (i) Years ended 31 March following that stated
- (j) Years ended 20 March following that stated
- (k) Years ended 15 July of that shown
- (l) Including lignite
- (m) Including sub-bituminous

Mine production of cobalt

tonnes (metal content)

Note(s)

- (1) There is frequently a considerable disparity between the cobalt content of ore raised and cobalt actually recovered
- (2) Figures in this table relate where possible to cobalt recovered. The principal exceptions to this are Brazil and New Caledonia, the figures for which relate to cobalt in ore raised

(a) Metal

(b) Years ended 30 June of that stated

Production of cobalt metal

Note(s)

(1) In addition to the production listed above, several countries, including the United Kingdom, Finland and France, are known to produce substantial amounts of cobalt compounds

(a) Some metal production in China is recorded in Belgium

(b) Excludes white alloy and matte which are believed to be further processed in Belgium and elsewhere

(c) Includes metal and metal contained in sulphate

(d) Including oxides

Note(s)

- (1) In addition to the countries listed, Bulgaria is believed to produce fluorspar
- (2) In addition, the USA produced the following amounts of fluorspar equivalent in fluorosilicic acid derived from processing phosphate rock ('000 t): 2006: 79.6; 2007: 94.3; 2008: 111.0; 2009: 114.0; 2010: 128.0

- (a) Including beneficiated and directly shipped material
- (b) Years ended 31 March following that stated
- (c) Years ended 20 March following that stated
- (d) Years ended 30 June of that stated

Production of primary gallium

Accurate data for gallium is difficult to obtain because it is produced only as a by-product of bauxite or zinc processing using proprietary techniques and the few producers do not report production figures. The United States Geological Survey estimates total world primary production as: 2006, 80 tonnes; 2007, 80 tonnes; 2008, 95 tonnes; 2009, 78 tonnes and 2010, 106 tonnes. However, in the 8th edition of their report on Gallium, Roskill Information Services estimated 2010 world primary production to be between 206 and 209 tonnes.

Producing countries, in decreasing order of production level, are believed to be China, Germany, Kazakhstan, Ukraine, Republic of Korea, Russia, Hungary and Japan.

Production of germanium metal

tonnes (metric)

Country	2006	2007	2008	2009	2010

Note(s)

- (1) In several countries substantial amounts of gold produced in small operations are not recorded in the official statistics used when compiling this table
- (2) In addition to the countries listed, Benin, Central African Republic, Congo, Eritrea, Madagascar and Rwanda produce less than 100 kg gold per year
- (3) Greece and Norway are believed to produce gold
- (a) Metal production
- (b) Years ended 7 July of that stated
- (c) Exports
- (d) Contained in blister copper, refinery muds and electrolytic copper
- (e) Years ended 31 March following that stated

Note(s)

- (1) This table includes all forms of amorphous and crystalline graphite but excludes synthetic material
- (2) In addition to the countries listed, Egypt, Namibia and the USA are believed to produce graphite

- (a) Crude
- (b) Including beneficiated and directly shipped material
- (c) Including flake graphite
- (d) Years ended 31 March following that stated

Note(s)

- (1) Unless otherwise indicated, these figures include production from scrap
- (2) Small amounts of steel are believed to be produced in DR Congo, Estonia, Ghana, Kenya, Mauritania, Sri Lanka and Uganda

(a) Production from the region east of the River Nistru

Note(s)

(1) The figures shown in this table include natural gas liquids

- (a) From oil shale
- (b) Years ended 31 March following that stated
- (c) Including oil from shale and coal
- (d) Including shares of production from the Neutral Zone
- (e) Years ended 30 June of that stated
- (f) Including natural gas liquids
- (g) Entirely natural gas liquids

Note(s)

- (1) Wherever possible, figures relate to quantities of platinum group metals thought to be recovered from ores originating in the country stated
 - (2) Figures for metal production are only given for countries where recovery is thought to be based predominantly on domestic materials or on imported materials which have not been recorded as mine production elsewhere in the table
 - (3) In addition to the production listed, concentrates produced in Spain, and possibly other countries, are believed to be processed in China to recover platinum group metals
- (a) Sales from mine production and stocks
 (b) Years ending 7 July of that stated
 (c) Platinum group metals; all forms

Production of rare earth oxides

tonnes (metric)

Country	2006	2007	2008	2009	2010
Russia	2 935	2 711	2 470	* 2 500	* 2 500
Brazil	620	760	540	200	* 200
China (a)	* 133 000	* 120 800	* 124 500	* 129 400	* 118 900
India (b)(c)	45	35	22	* 20	* 20
Malaysia	580	440	150	20	480

Note(s)

- (1) All the figures in this table are either reported as rare earth oxides or are calculated to rare earth oxide equivalent
- (2) Prior to the 2005-2009 edition of this book, a table for the production of 'rare earth minerals' was included rather than the current 'rare earth oxides'. Users should exercise caution when comparing statistics over longer time periods
- (3) Although rare earth minerals are believed to be extracted in other countries, there is insufficient evidence to suggest that rare earth oxides are produced in those countries
- (4) In addition to the countries listed, the USA are known to be producing rare earth oxides from existing stockpiles. Best available estimates suggest this is in the order of 2000 tonnes per year

- (a) Includes production from iron ore extraction, bastnasite concentrates and ion absorption clays
 (b) Years ending 31 March following that stated
 (c) May include small quantities of other rare earth compounds

Note(s)

- (1) This table does not include production of refined salt
- (2) Salt is known to be produced in many countries for which statistics are not available

- (a) Sea salt
- (b) Salt; all forms
- (c) Used for purposes other than salt-making
- (d) Years ended 30 June of that stated
- (e) Years ended 7 July of that stated
- (f) Lake salt
- (g) Including salt in brine
- (h) Sold or used by producers
- (i) Brine salt
- (j) Years ended 31 March following that stated
- (k) Seasons beginning in November and ending in May of the year stated
- (l) Years ended 20 March following that stated
- (m) Excluding Victoria and the Northern Territory

Production of selenium metal

tonnes (metric)

Country	2006	2007	2008	2009	2010
Belgium	* 200	* 200	* 200	* 200	* 200
Finland	70	52	65	66	* 66

Nepal					
Kyanite (d)	21	18	15	10	* 10

Note(s)

(1) A number of other countries produce sillimanite minerals but details of output are not reported
(2) In addition to the countries listed above as producing sillimanite minerals, synthetic mullite is believed to be produced in Germany and Hungary
(3) Production capacity for synthetic mullite also exists in China, India, Japan, USA and United Kingdom but output is believed to be zero

(a) Including related minerals

(b) Including beneficiated and directly shipped material

(c) Years ended 31 March following that stated

(d) Years ending 15 July of that stated

Note(s)

- (1) Niobium and tantalum minerals are believed to be produced in Namibia, Russia and South Africa.
- (2) The figures in this table refer to gross tonnage of tantalum and niobium concentrates
- (3) Tantalum is also recovered from tin slags and is believed to have accounted for approximately 20% of raw material supplied

- (a) Years ended 7 July of that stated

Note(s)

- (1) The figures in this table refer to gross tonnage of titanium concentrates
- (2) Some ilmenite is converted to synthetic rutile in Australia, India, Japan, Taiwan and USA
- (3) In 2010 South Africa produced an estimated 1 400 000 tonnes of slag (85% TiO₂) and Canada produced an estimated 1 000 000 tonnes of slag (80-95% TiO₂)
- (a) It is believed that the majority of this is processed into slag
- (b) Canada produces some ilmenite which is sold as such and not processed into slag, but tonnages are small
- (c) Years ended 31 March following that stated
- (d) BGS estimates, based on known imports into certain countries
