

The type Ludlow Series: Sections

A number of sections in the type area of the Ludlow Series have been described in detail, and provide evidence for the relationships between the various faunas and floras used in biostratigraphical correlation, as well as for their occurrence in relation to lithostratigraphical units. The sections also include the stratotype for the base of the series and the Gorstian Stage at **Pitch Coppice Quarry**, and the stratotype for the base of the Ludfordian Stage at **Sunnyhill Quarry**.

The **Pitch Coppice Quarry** section covers the lowest part of the Lower Elton Formation.

The **Goggin Road** section exposes most of the Lower Elton Formation, together with the Middle Elton, Upper Elton and Lower Bringewood formations.

The Lower Bringewood, Upper Bringewood, Lower Leintwardine, Upper Leintwardine and Lower Whitcliffe formations are exposed in the **Deer Park Road** section.

The Upper Bringewood, Lower Leintwardine, Upper Leintwardine and Lower Whitcliffe formations crop out at **Sunnyhill Quarry**, or in the adjacent track section between Sunnyhill and Overton quarries.

The top of the Lower Leintwardine Formation, together with the Upper Leintwardine, Lower Whitcliffe and Upper Whitcliffe formations, can be seen in sections on **The Whitcliffe**, and nearby sections in **Whitcliffe Road** expose the top of the Upper Whitcliffe Formation and the local base of the Prídolí Series.

The location of each section is shown on the map of the Ludlow Anticline.
