*The full range of Survey publications is available from  
the BGS Sales Desks at Nottingham, Edinburgh and  
London; see contact details above or shop online at  
[www.geologyshop.com](http://www.geologyshop.com)*

*The London Office also maintains a reference collection  
of BGS publications, including maps, for consultation.*

*The Survey publishes an annual catalogue of its maps  
and other publications; this catalogue is available from  
any of the BGS Sales Desks.*

*The British Geological Survey carries out the geological  
survey of Great Britain and Northern Ireland (the latter  
as an agency service for the government of Northern  
Ireland), and of the surrounding continental shelf, as  
well as its basic research projects. It also undertakes  
programmes of British technical aid in geology in  
developing countries as arranged by the Department for  
International Development.*

*The British Geological Survey is a component Institute  
of UK Research and Innovation (UKRI).*

## PREFACE

Welcome to the latest edition of World Mineral Production, which includes global mineral production data for 2019 and is a continuation of the dataset that began in 1913.

This publication is compiled from a comprehensive database, maintained by the British Geological Survey, through which we aim to provide a reliable, comprehensive and continuous set of data covering most of the minerals that enter international trade. In this volume we have set out the production figures by country for more than 70 mineral commodities, over the five-year period from 2015 to 2019. The objective of this series remains to present the latest production information obtained from official bodies in individual countries, although other sources are also used to ensure completeness and accuracy. The cooperation afforded to the British Geological Survey by numerous national and international organisations is gratefully acknowledged.

Overall changes in the world production of most minerals between 2018 and 2019 were again less than 10 per cent. However, as we publish this edition, the world continues to struggle to control the COVID-19 pandemic. Consequently we anticipate significant changes next year when we publish data for 2020 because of the impact this is having on the global minerals industry. To support understanding of this issue, BGS-led research is utilising this long running dataset to examine the impacts of extreme shocks on raw material supply chains for manufacturing transport systems.

World mineral production data for 2019 shows many interesting features and trends. Despite the Drakelands tungsten mine in the UK closing in 2018, and small changes in production from other countries, total global production of tungsten increased by nearly 12 per cent. This is largely due to a 16 per cent increase in tungsten output from China, which means it accounted for 83 per cent of total world mine production of tungsten in 2019, compared with 79 per cent in 2018. Production concentration is one of the key parameters of supply risk used to determine the 'criticality' of a mineral raw material. Therefore, this change may increase supply concerns about tungsten.

Other notable changes include a 13 per cent increase in total world mine production of nickel. This was largely driven by Indonesia, which increased its output by 59 per cent compared to 2018, with additional material feeding into significant increases in stainless steel production. However, Indonesia's output in 2020 is likely to be lower due to new export restrictions on raw materials.

In contrast, there was a 21 per cent decrease in world mine production of cobalt. This principally resulted from a 29 per cent decrease in output from the Democratic Republic of Congo (DRC), due to declining cobalt prices, caused by lower than expected demand and increased inventories. World production of lithium (measured as Li content) decreased by about 13 per cent because of

some notable shifts in global production. Increases in lithium production relative to 2018 from Chile (+ 16%) and Bolivia (+ 74%) were offset by declines in production relative to 2018 from Australia (- 18%) and Portugal (- 22%), and the cessation of output from Canada and Namibia. The overall decline in global production of lithium between 2018 and 2019 has resulted from lower than expected demand, which has caused prices to decrease. However, as the world transitions to a low-carbon economy, the use of cobalt and lithium for automotive electrification means that production of both metals will need to increase over the next decade.

During the past year, the BGS has provided advice to a number of UK Government departments on issues related to security of supply of minerals. It has also published a new series that provides an overview of the geological potential in the UK for selected raw materials used in decarbonisation technologies. Further afield, a recent BGS-led study in collaboration with the geological surveys of Finland, Norway and Sweden focussed on assessing cobalt resources in Europe and the potential for new discoveries. This study is the first harmonised cobalt resource assessment for Europe and is based on 509 cobalt-bearing deposits and occurrences in 25 countries.

BGS is also involved with notable projects on graphite and lithium in eastern Africa, and a number of projects focussed on battery raw materials in South America, including upscaling lithium brine supply in Bolivia and developing a framework for a strategic environmental and social assessment (SESA) for Argentina, Bolivia, Chile and Peru. Furthermore, BGS is leading the NERC-funded Lithium for Future Technology (LiFT) project, which over the next 3 years will investigate the geological cycles of lithium in a range of environments.

There is growing interest in the provision of minerals and metals from secondary sources and their flows in a circular economy. To address this, BGS is a partner in two of the new UKRI Interdisciplinary Circular Economy Centres, for Technology Metals (TechMetCE) and Mineral-based Construction Materials (ICEC-MCM).

As always, I would welcome any comments and suggestions that you have relating to this volume, which might help us to meet your ongoing needs.

Karen Hæghøj

## CONTENTS

### Commodity Index

Alumina 3	Magnesium 46
Aluminium 4	Manganese 47
Antimony 5	Mercury 48
Arsenic 5	Mica 48
Asbestos 6	Molybdenum 49
Barytes 7	Natural gas 55
Bauxite 2	Natural sodium carbonate 65
Bentonite 8	Nepheline syenite 49
Beryl 10	Nickel 50
Bismuth 11	Niobium 71
Borates 11	Perlite 52
Bromine 12	Petroleum 53
Cadmium 12	Phosphates 57
Chromium 13	Platinum 58
Coal 13	Potash 59
Cobalt 16	Pyrites 66
Copper 18	Rare earths 59
Diamond 21	Rhenium 60
Diatomite 22	Salt 60
Feldspar 23	Selenium 63
Ferro alloys 37	Silicon 37
Fluorspar 24	Sillimanite 63
Fuller's earth 8	Silver 64
Gallium 25	Strontium 65
Germanium 25	Sulphur 66
Gold 26	Talc 69
Graphite 29	Tantalum 71
Gypsum 30	Tellurium 72
Helium 31	Tin 72
Indium 32	Titanium 73
Iodine 32	Tungsten 75
Iron ore 33	Uranium 76
Iron and steel 34	Vanadium 76
Kaolin 40	Vermiculite 77
Lead 42	Wollastonite 77
Lithium 44	Zinc 78
Magnesite 45	Zirconium 80

## APPENDIX

Appendix 1: Tables relating to Europe only  
Aggregates 82  
Cement 84

Appendix 2: Further acknowledgments

## EXPLANATORY NOTES

### Coverage

*World Mineral Production* covers the majority of economically important mineral commodities. For each commodity constant efforts are made to ensure that as many producing countries as possible are reported. For some commodities, where statistics on production are not publicly available, estimates are made. Users of this compilation are advised that more statistical information than can be included in a publication of this nature is held in the British Geological Survey files and is available for consultation. Historical data (from 1913 for many commodities) can be obtained from the predecessors to this series entitled *World Mineral Statistics* and the *Statistical Summary of the Mineral Industry*. Copies of these publications are available in the World Archive section of the website: [www.mineralsUK.com](http://www.mineralsUK.com).

### Arrangement of countries

Countries are ordered alphabetically in geographical groupings as follows:

Europe  
Africa  
North and Central America, including the Caribbean  
South America  
Asia  
Australasia, including the Pacific Islands

### Metals

Mine production of many metals is expressed in terms of metal content. This is clearly indicated at the head of the table, adjacent to the unit used. For aluminium, cobalt, copper, iron, lead, nickel, tin and zinc, mine production and metal production are shown in separate tables. Unless otherwise specified, metal production statistics relate to metal recovered from both domestic and imported materials, whether primary or secondary, but exclude remelted material wherever possible.

### World totals

For certain minerals and metals no world total is shown due to the non-availability of certain individual country totals.

### Exclusion of Warranty

Use by recipients of information provided by the BGS, is at the recipients' own risk. BGS has taken care to ensure that information provided is as free from error as is reasonably practical. In view of the disparate sources of information at BGS's disposal, including such material donated to BGS, that BGS accepts in good faith as being accurate, the UK Research and Innovation (UKRI) and the Natural Environment Research Council (NERC) give no warranty, expressed or implied, as to the quality, accuracy, performance, and merchantability of the information supplied, or to the information's suitability for any use whether made known to BGS or otherwise. UKRI/NERC/BGS accepts no liability whatever in respect of loss, damage, injury or other occurrence however caused.

Compilation of this volume of mineral statistics has been possible only by obtaining information from a very large number of organisations throughout the world, chiefly home and overseas government departments and specialist national or international authorities concerned with particular sectors of the minerals or metals industries. To all these bodies the British Geological Survey expresses its grateful acknowledgement for the information made available, whether in published form or provided by direct correspondence. Particular acknowledgement is made to the Mines Departments and other government agencies of many countries whose regular statements, yearbooks and other reports are worthy of direct consultations by readers in search of detail.

Specialist commodity organisations which have kindly allowed information to be reproduced include the International Copper Study Group, the International Lead and Zinc Study Group, the International Nickel Study Group and the Barytes Association. In a few instances, information on specific commodities has been obtained directly from company sources. The co-operation of other members of the International Consultative Group on Non-Ferrous Metal Statistics is also gratefully acknowledged.

Appendix 2 contains a fuller list of organisations to whom acknowledgement is made.

#### *Units*

The Statistics shown in this volume are expressed in metric units. The following factors are given for converting to non-metric units:

tonnes  $\times 0.9842$  = long tons  
tonnes  $\times 1.1023$  = short tons  
kilograms  $\times 2.2046$  = pounds  
kilograms  $\times 32.1507$  = troy ounces  
cubic metres  $\times 35.3147$  = cubic feet  
1 tonne of crude petroleum equals on average 7 barrels of crude petroleum.  
1 flask mercury = 34.5 kilograms

#### *Symbols*

### Note(s)

- (1) This table includes production of refractory bauxite.
- (2) In addition to the countries listed, some bauxite continues to be produced in Mexico but it is all used as construction aggregates and figures are not reported.

- (a) For non-metallurgical uses
- (b) No adjustment has been made for moisture content
- (c) Data for Alabama only
- (d) Years ended 30 September of that stated
- (e) Years ended 31 March following that stated
- (f) Years ended 20 March following that stated
- (g) Conservative BGS estimate based on reported exports
- (h) Years ended 30 June of that stated

### Note(s)

- (1) Where possible figures in this table show the alumina equivalent (Al<sub>2</sub>O<sub>3</sub>) of total hydrate produced, whether or not calcined.
- (2) The figures in this table represent alumina produced from bauxite. Alumina-rich materials can also be derived from salt slags formed during the production of secondary aluminium.

See note on the following page

## Production of bentonite and fuller's earth

### Note(s)

- (1) Bentonites consist of montmorillonite (one of the smectite group of clay minerals) and occur in two main varieties, calcium bentonite, the most commonly occurring, and sodium bentonite, industrially the more important.
  - (2) Calcium bentonite can be converted to sodium bentonite by a sodium-exchange process.
  - (3) In some countries, such as the United Kingdom, calcium bentonite is known as fuller's earth, a term which is also used to refer attapulgite, a mineralogically distinct clay mineral but exhibiting similar properties.
  - (4) In addition to the countries listed, Vietnam may produce bentonite and Algeria, France, Iran and Japan may produce fuller's earth.
- (a) Including attapulgite and sepiolite  
 (b) Sales  
 (c) Years ended 30 June of that stated  
 (d) Smectite  
 (e) Sold or used by producers  
 (f) Years ended 31 March following that stated  
 (g) Years ended 20 March following that stated

## Production of beryl

tonnes (metric)

Country	2015	2016	2017	2018	2019
Madagascar (a)	* 140	* 140	* 140	* 140	* 140
Mozambique	312	181	53	416	* 420
Zambia	7	5	3	5	6
USA (b)	5 100	3 870	3 760	4 130	* 4 200
China	* 1 200	* 1 200	* 1 200	* 1 200	* 1 800

### Note(s)

- (a) Includes ornamental and industrial products  
 (b) Includes bertrandite ore, calculated as equivalent to beryl containing 11% beryllium oxide

## Mine production of bismuth

tonnes (metal content)

Country	2015	2016	2017	2018	2019
Armenia	* 4	* 4	* 4	* 4	* 4
Russia	* 45	* 45	* 45	* 45	* 45

World total	4 300	4 800	5 900	6 300	3 700

### Note(s)

- (1) The figures in this table are in some instances derived from reported bismuth content of refined and impure metal plus recoverable in ores and concentrates exported.
- (2) Production for some countries may include bismuth produced from imported ores but it is thought that any resulting duplication is insignificant in the countries shown.
- (3) In addition to the countries listed, the Republic of Korea may produce bismuth but data are confidential.

(a) Metal production

See notes on the following page

## Production of coal

### Note(s)

- (1) There is no international agreement as to the separate definition of lignite and brown coal. In some cases they are distinguished. Elsewhere both may be aggregated under one or other term.
  - (2) Data for coking coal is not always distinguished from other types of bituminous coal. The term "bituminous" in this table may include coking coal where the latter is not separately shown.
  - (3) Where no sub-commodity is shown the figures relate to all ranks of coal.
- (a) Spitzbergen: not including production from mines controlled by Russia  
 (b) Excluding production in Kosovo  
 (c) Including lignite  
 (d) Including anthracite  
 (e) May also include other types of coal  
 (f) Years ended 20 March following that stated  
 (g) Years ended 30 June of that stated  
 (h) Years ended 31 March following that stated  
 (i) Years ended 15 July of that shown  
 (j) Including sub-bituminous

### Note(s)

- (1) There is frequently a considerable disparity between the cobalt content of ore raised and cobalt actually recovered.
- (2) In many countries it is not clear whether cobalt that is known to be present in the extracted ore is subsequently recovered, nor whether the reported figure is contained or recovered cobalt.
- (3) Consequently, the figures in this table may relate either to cobalt recovered or to cobalt contained in ore raised.
- (4) In addition to the countries listed, cobalt is contained within copper ores in Poland but this is not currently recovered.

(a) Metal and/or refined

(b) Years ended 30 June of that stated

## Production of refined cobalt

### Note(s)

(1) Refined cobalt can be in the form of metal, oxides, carbonates, sulphates and many other compounds. Efforts are made to avoid double-counting but it is not always possible to be certain.

- (a) Some refined cobalt production in China is recorded in Belgium
- (b) Excludes white alloy and matte which are believed to be further processed in Belgium and elsewhere
- (c) Includes metal and cobalt contained in sulphate
- (d) Including oxides
- (e) Carbonate

### Note(s)

- (1) In addition, the USA produced the following amounts of fluorspar equivalent in fluorosilicic acid derived from processing phosphate rock ('000 t): 2015: 114; 2016: 105; 2017: 72; 2018: 64; 2019: 27.

- (a) Years ended 30 June of that stated
- (b) Years ended 31 March following that stated
- (c) Years ended 20 March following that stated

## Production of primary gallium

tonnes (metric)

Country	2015	2016	2017	2018	2019
Germany	11	23	—	—	—
Russia	* 13	* 13	* 13	* 13	* 13
Ukraine	* 9	* 9	* 4	* 4	* 4
China	284	171	319	404	357
Japan	6	3	3	3	* 3
Korea (Rep. of) (a)	* 3	* 3	* 3	* 3	* 3

Note(s)

- (1) Accurate data for gallium is difficult to obtain because it is produced only as a by-product of bauxite or zinc processing using proprietary techniques. As a consequence, this table may not be complete.
- (2) Lower grade production is often subsequently refined to higher grade material which complicates the collection of data as double counting is a significant risk.
- (3) In addition to the above primary production, there is also believed to be significant production of refined gallium from scrap recycling.

(a) Primary production only

## Production of germanium metal

tonnes (metric)

Country	2015	2016	2017	2018	2019
Finland	13	0	—	—	—
Russia	* 5	* 6	* 6	* 6	* 6
USA (a)	* 3	* 2	* 3	* 3	* 3
China	94	82	79	95	86

Note(s)

- (1) Germanium is also believed to be recovered from imported or domestic material in Belgium, Canada, Germany, Japan.

(a) Including production of secondary metal

## Mine production of gold

In addition to 'industrial scale' gold mines around the World total, a significant quantity of gold is mined by small scale or artisanal producers, both on a legal and illegal basis. In some countries the quantities involved with artisanal mining can be relatively large. The compilation of reliable data for the quantity produced by artisanal mining in each country is difficult, particularly where the actions are illegal. Artisanal mining can be seasonal, temporary and highly variable, on both geographical and temporal scales.

Where possible, the table attempts to include estimates for artisanal mining of gold in order that the calculated World total totals are as complete as possible. However, the difficulties noted above mean that these totals cannot be completely accurate and they are consequently rounded to a greater degree than the individual country figures may suggest is appropriate. This is an attempt to convey the level of uncertainty associated with these total figures.

For clarity, additional comments on specific countries are shown below (there may be other countries where artisanal mining also occurs; these comments are not intended to be exhaustive):-

Benin – artisanal gold mining is known to take place but no reliable estimates are available. It has been estimated to be in the region of 20–30 kg per year, but it could be larger in some years.

Burkina Faso – official figures include 259 kg for artisanal mining in 2019; 306 kg in 2018; 150 kg in 2017; 235 kg in 2016; and 302 kg in 2015. It is believed the actual artisanal production is likely to be higher.

Burma – the figures shown in the table are reported and are believed to include artisanal mining.

Cameroon – all gold mining is currently small scale or artisanal. Available estimates vary widely, from as low as 500 kg per year to something in the order of 1500 kg or 2000 kg per year.

Central African Republic – artisanal gold mining is known to take place. No reliable estimates are available but it could be in the region of 50–80 kg per year. The figures shown are reported and it is assumed these are artisanal but they may not be fully inclusive in every year.

Colombia – Artisanal and small-scale mining, both legal and illegal, is extensive within Colombia. Although the government is taking steps to improve the licencing of legal artisanal mining and also to crack down on illegal activities, during the last decade it is believed that illegal mining has grown to the extent that it has become more widespread than legal mining. Some illegal mining and trade is thought to be coordinated by organised crime groups. It is possible that illegally mined material is brought into or out of the country without being recorded. It can therefore be assumed that the total mine production of gold significantly exceeds the reported figure, however it has not been possible to make a reliable estimate for this additional material.

Congo – all gold mining is believed to be small scale or artisanal and it is believed there are more than 200 locations where this occurs. A nominal estimate of 150 kg per year is shown in the table.

Costa Rica – all gold mining is currently artisanal. The figures in the table are reported by an official source.

Democratic Republic of Congo – artisanal mining is quite extensive, the figures shown include estimates for artisanal mining ranging from 4000 to 11000 kg per year.

Equatorial Guinea – artisanal gold mining is very likely to be taking place but no accurate information is available. A nominal estimate of 200 kg per year is included in the table but it could be more or less than this.

Ethiopia – small scale and artisanal gold mining is significant, but not all of it is illegal because some artisanal miners operate under a formal license. A proportion of the gold mined from artisanal sources is sold to the national bank but illicit sales to non-licensed buyers remains widespread. National bank purchases of gold from artisanal sources in fiscal year 2014/15 amounted to 5473 kg; in 2015/16 to 4145 kg and in 2016/17 to 1920 kg. Actual artisanal production could be higher.

France (French Guiana) – the table includes an estimate of 5000 kg to 9000 kg per year for artisanal mining which is not included in the official reported figures.

Gabon – attempts to regulate artisanal gold mining are being undertaken with gold from artisanal miners being purchased by a government agency from 2013. The figures in the table include 55 kg for artisanal mining in 2015; 50 kg in 2016 and 40 kg in 2017. Data from 2018 is all artisanal.

Germany – legal artisanal mining is known to occur along the Rhine Valley but the amounts recovered are unknown. A nominal estimate has been included.

Ghana – gold produced by artisanal mining is purchased by a state-owned marketing organisation but official figures of the quantity vary depending on the source. They are also reported in publications produced by under the Extractive Industry Transparency Initiative (EITI). In the table below the following figures are included for artisanal production: 32 073 kg in 2015; 35 292 kg in 2016; 45 992 kg in 2017; 61 720 kg in 2018; and 49 398 kg in 2019.

Guinea – the figures in the table include reported figures for artisanal mining. However, actual artisanal production may be higher than those reported because it is difficult to distinguish the material derived from artisanal mining within Guinea from that moved across the border from Mali or other countries.

Ivory Coast – efforts are being made within Ivory Coast to rationalise artisanal mining as part of the EITI process. Reports suggest that it varies considerably from year to year and may range between 1000 kg and 10 000 kg per year. A conservative estimate of 3000 kg has been added to reported industrial scale mine output in 2015 and 4500 kg per year for 2016 to 2019.

Kenya – The reported figures shown are believed to include artisanal mining but in reality it could be much higher.

Liberia – official figures are believed to include both the industrial mine and artisanal production.

Madagascar – estimates of artisanal mining are in the order of 100 kg to 3000 kg per year.

Mali – the figures include an estimate of 5000 kg per year for artisanal mining for 2014 and 2015 and 6000 kg per year thereafter, but it is likely the real figure varies more than this from year to year.

Nigeria – Official reporting of artisanal gold production by the Ministry is low (160 kilograms in 2019). However imports of gold to other countries from Nigeria are reported to be much larger, which suggests the quantity of production may be higher and the estimates in the table reflect this. The EITI reports plans for formalising the artisanal mining sector and for the support of 10 000 artisanal miners in five regions of the federation.

Panama – artisanal mining is known to occur but no reliable estimates are available. A nominal estimate of 100 kg per year has been included.

Papua New Guinea – official estimates of "alluvial and small scale" mining are approximately 3500 to 4000 kg per year.

Rwanda – it is believed that the reported and estimated figures are actually gold that originated in Nigeria or other countries in the region but is not recorded in those countries.

Senegal – an estimate of 2100 kg has been added to each year for artisanal mining.

South Sudan – artisanal mining is known to occur but reliable estimates are difficult to obtain. It has been estimated as approximately 200 kg per year.

Tanzania – Artisanal mining is known to occur and in 2015 and 2016 was reported as approximately 30 kg per year.

Togo – the reported figures are exports of gold which is transiting through the country. It is believed the majority of this originates in Burkina Faso from artisanal mining but it is not recorded within the production figures for that country. Consequently it is recorded here for completeness. Some artisanal mining is also believed to occur in Togo.

Venezuela – artisanal mining is believed to be quite extensive and increasing. Estimates of quantities vary widely from less than 1000 kg up to 9000 kg per year. The Central Bank aims to purchase all the artisanally mined gold, however, actual output is believed to be larger than the reported figures and therefore higher estimates have been used.

Vietnam – artisanal mining is believed to be taking place at the site of a former industrial mine. No information is available to indicate likely scale.

See notes on the following page.

## Mine production of gold

### Note(s)

- (1) In several countries substantial amounts of gold produced in small and/or artisanal operations are not recorded in the official statistics.  
Estimates have been added where possible but these have varying degrees of uncertainty.
- (2) In addition to the countries listed, Cambodia, El Salvador, Haiti, Malawi, Pakistan, Paraguay and Portugal may produce gold.

- (a) Metal production
- (b) Sales
- (c) Years ended 7 July of that stated
- (d) Exports
- (e) Contained in blister copper, refinery muds and electrolytic copper
- (f) Year ended 30 November of the year stated
- (g) Years ended 31 March following that stated
- (h) Years ended 20 March following that stated

Note(s)

- (1) Some countries produce large quantities of synthetic gypsum. Where possible, this output is excluded from the table.  
(2) In addition to the countries listed, Indonesia, Japan and Vietnam may also produce gypsum.

- (a) Including anhydrite
- (b) Sales
- (c) Excluding output from the region east of the River Nistru and the Municipality of Bender
- (d) Years ended 30 June of that stated
- (e) Years ended 7 July of that stated
- (f) Years ended 31 March following that stated
- (g) Including selenite
- (h) Years ended 20 March following that stated

## Production of helium

million cubic metres

### Note(s)

- (1) In addition to the countries listed, Bahrain and Chile also produce ferro-chrome.  
(2) In addition to the countries listed, Saudi Arabia also produces ferro-manganese and ferro-silico-manganese.

- (a) Sales
- (b) Years ended 30 June of that stated
- (c) Including ferro-silico-chrome
- (d) Nickel content
- (e) Years ended 31 March following that stated
- (f) Years ended 20 March following that stated

### Note(s)

(1) In addition to the countries listed, Denmark is believed to produce kaolin.

- (a) Beneficiated
- (b) Sales
- (c) Washed and dried
- (d) Washed
- (e) Years ended 7 July of that stated
- (f) Sold or used by producers
- (g) Beneficiated; excludes directly used natural kaolin
- (h) Years ended 31 March following that stated
- (i) Years ended 20 March following that stated
- (j) Years ended 30 June of that stated

### Note(s)

(1) In addition to the countries listed, Bulgaria is believed to produce magnesite.

- (a) Chloride produced from solution mining
- (b) Officially described as magnesitic dolomite and brucite
- (c) Including beneficiated and directly shipped material
- (d) Years ended 31 March following that stated
- (e) Years ended 20 March following that stated
- (f) Magnesium chloride
- (g) Years ended 15 July of that stated
- (h) Years ended 30 June of that stated

## Production of primary magnesium metal

tonnes (metric)

Country	2015	2016	2017	2018	2019
Russia	12 460	14 346	15 593	15 753	15 336
Turkey	* 100	* 3 750	* 4 000	* 4 500	* 4 500

Malaysia	* 1 600	* 400	* 30	* —	—

### Note(s)

- (1) In addition, substantial quantities of magnesium compounds are produced by, used and recycled within the process of titanium sponge production. It is believed this relates to the mineral carnallite and/or secondary magnesium chloride compounds.
- (2) Magnesium used within the process of titanium sponge production is not marketed as primary magnesium metal and is therefore excluded from this table. Annual quantities are likely to be approximately: Russia 50,000 t, Kazakhstan 10,000 t and Ukraine 8,000 t.

### Note(s)

(1) Data relate to refined nickel plus the nickel content of ferro-nickel, nickel oxide and nickel salts. It does not include nickel content of nickel hydroxide cake or nickel matte as these are further refined elsewhere.

(2) In addition to the countries listed, the USA produces some nickel as a refinery by-product.

(a) Years ending 31 March following that stated

### Note(s)

(1) The figures shown in this table include natural gas liquids.

- (a) Including oil from shale and coal
- (b) From oil shale
- (c) Years ended 31 March following that stated
- (d) Including shares of production from the Neutral Zone
- (e) Years ended 30 June of that stated

### Note(s)

(1) So far as possible the figures in this table exclude flared or reinjected gas.

(a) Dry gas

(b) Years ended 20 March following that stated

(c) Years ended 30 June of that stated

(d) Years ended 31 March following that stated

(e) Including one-half of the output of the Neutral Zone

### Note(s)

(1) In addition to the countries listed, Indonesia and Nigeria are believed to produce phosphate rock

(a) Years ended 30 June of that stated

(b) Including lime phosphates

(c) Including beneficiated and directly shipped material

(d) Exports

(e) Including phosphate dust

(f) Years ended 31 March following that stated

(g) Years ended 20 March following that stated

## Mine production of platinum group metals

kilograms (metal content)

World total	457 000	453 000	454 000	466 000	457 000

### Note(s)

- (1) Wherever possible, figures relate to quantities of platinum group metals thought to be recovered from ores originating in the country stated.
- (2) Figures for metal production are only given for countries where recovery is thought to be based predominantly on domestic materials or on imported materials which have not been recorded as mine production elsewhere in the table.
- (3) In addition to the production listed, concentrates produced in Spain, and possibly other countries, are believed to be processed in China to recover platinum group metals.

(a) Sales from mine production and stocks  
 (b) Years ending 7 July of that stated

## Production of potash

Australia (c)	8 799	12 631	16 003	17 754	19 737

### Note(s)

- (1) All the figures in this table are either reported as rare earth oxides or are calculated to rare earth oxide equivalent.
- (2) Prior to the 2005-2009 edition of this book, a table for the production of 'rare earth minerals' was included rather than the current 'rare earth oxides'. Users should exercise caution when comparing statistics over longer time periods.
- (3) Although rare earth minerals are believed to be extracted in other countries, there is insufficient evidence to estimate the quantities of contained oxides.
- (4) Where possible, data are shown against the country where the mineral is mined.

(a) Includes production from iron ore extraction, bastnasite concentrates and ion absorption clays

(b) Years ending 31 March following that stated

(c) Years ending 30 June of that stated

### Note(s)

- (1) This table does not include production of refined salt.
- (2) Salt is known to be produced in many countries for which statistics are not available.

- (a) Sea salt
- (b) Exports
- (c) Years ended 7 July of that stated
- (d) Lake salt
- (e) Years ended 30 June of that stated
- (f) Including salt in brine
- (g) Sold or used by producers
- (h) Years ended 20 March following that stated
- (i) Seasons beginning in November and ending in May of the year stated.
- (j) Years ended 31 March following that stated

## Production of refined selenium

tonnes (metric)

Country	2015	2016	2017	2018	2019
Armenia	* 20	* 20	* 20	* 20	* 20
Belgium	* 200	* 200	* 200	* 200	* 200

Uzbekistan	* 20	* 20	* 20	* 20	* 20

### Note(s)

(1) In addition to the countries listed, Australia, Iran, the Republic of Korea and Zimbabwe are believed to produce refined selenium.

(a) Includes selenium produced from imported material

## Production of sillimanite minerals

tonnes (metric)

Country	2015	2016	2017	2018	2019
France					
Andalusite (a)	* 68 000	* 58 000	* 68 000	* 65 000	* 68 000
Madagascar	1 900	1 800	4 200	* 0	* 0
South Africa					
Andalusite	* 190 000	* 180 000	* 200 000	* 200 000	* 190 000
USA					
Kyanite (b)	109 000	79 700	91 300	89 200	* 90 000
India					
Kyanite (c)	2 901	3 253	7 818	4 889	2 899
Sillimanite (c)	69 942	68 131	81 638	69 033	12 931
Nepal					
Kyanite (d)	7	1	2	0	0

### Note(s)

(1) A number of other countries produce sillimanite minerals but details of output are not reported.

(2) In addition to the countries listed above as producing sillimanite minerals, synthetic mullite is believed to be produced in Brazil, Germany and Hungary.

(3) Production capacity for synthetic mullite also exists in China, India, Japan, the USA and the United Kingdom but output is believed to be zero.

(a) May include other sillimanite minerals

(b) Including related minerals

(c) Years ended 31 March following that stated

(d) Years ending 15 July of that stated

## Production of sulphur and pyrites

### Note(s)

- (1) In addition to the countries listed Dem. P.R. of Korea may also produce pyrites and may recover sulphur from metal processing;  
Ukraine may also produce sulphur.
- (a) From petroleum refining and/or natural gas
  - (b) From metal sulphide processing
  - (c) Other
  - (d) Sulphur; all forms
  - (e) Including frasch
  - (f) Years ended 31 March following that stated
  - (g) Years ended 30 June of that stated

### Note(s)

- (1) Niobium and tantalum minerals are also believed to be produced in Namibia and South Africa.
- (2) The figures in this table refer to gross tonnage of tantalum and niobium concentrates, except where noted.
- (3) Tantalum is also recovered from tin slags and this is believed to have accounted for approximately 20% of raw material supplied.

- (a) Years ended 7 July of that stated
- (b) Years ended 30th June of that stated
- (c) Exports
- (d) Excluding Russia and Spain

Vietnam	5 500	* 5 500	* 5 500	* 5 500	* 5 500
Australia	22	41	21	82	82
World total	348 000	362 000	369 000	373 000	371 000

### Note(s)

(1) Figures relate to both primary and secondary metal.

(2) In addition to the countries listed, many countries produce small amounts of secondary metal.

(a) Refined, including alloys

(b) Years ended 31 March following that stated

## Production of titanium minerals

tonnes (metric)

Country	2015	2016	2017	2018	2019

Ilmenite (wt of concs)	12 900 000	11 700 000	11 900 000	12 200 000	12 000 000
Rutile (wt of concs)	700 000	700 000	700 000	600 000	600 000
All forms (TiO <sub>2</sub> content)	7 100 000	6 300 000	6 300 000	6 500 000	6 300 000

### Note(s)

- (1) The figures in this table refer to gross tonnage of titanium concentrates.
- (2) Some ilmenite is converted to synthetic rutile in Australia, India, Japan and USA.

- (a) Including natural rutile
- (b) It is believed that the majority of this is processed into slag.
- (c) Including synthetic rutile
- (d) Canada produces some ilmenite which is sold as such and not processed into slag, but tonnages are small
- (e) Years ended 31 March following that stated
- (f) Years ended 30 June of that stated

## Mine production of tungsten

tonnes (metal content)

### Note(s)

(1) In this table the term 'zirconium minerals' is understood to mean zircon, unless otherwise stated.

(a) Baddeleyite concentrate

(b) Including caldasite rock containing zircon and baddeleyite

(c) Years ending 31 March following that stated

(d) Conservative BGS estimates, based on exports

(e) Years ended 30 June of that stated

### Note(s)

- (1) So far as possible, these production statistics include construction sand; gravel, pebbles, shingle and flint; crushed stone used for concrete aggregates, roadstone and other construction uses; granules, chippings and powders.
  - (2) Where official sources show more than one series for aggregates the higher series has generally been used in this table.
  - (3) Where marine sands and gravels have been identified, these are included.
  - (4) Information may be incomplete or absent due to reporting methods, confidentiality or lack of available information.
  - (5) Production from many small operations are not officially compiled. The minimum number of employees for which establishments are required to report production varies between different countries and can also vary from year to year.
  - (6) Quantities of sand from sand and gravel operations may be discarded due to low demand. This may or may not be included in the statistics.
- (a) Sales
  - (b) Estimated by official source based on a previous year census and the rate of change observed from a sample of quarries in subsequent years
  - (c) Includes small quantities for other purposes in Northern Ireland
