Graphocephala fennahi

- Native to North America
- Introduced to GB in 1930s
- Spread throughout S. England
- New record from Leeds
- Record on-line

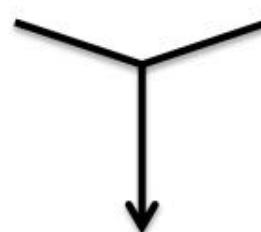

Prokelisia marginata

- Native to east coast of North America
- First record Hythe in 2008
- Monophagous on *Spartina* spp.
- Complex ecological communities

Alien herbivore on alien plant

Spartina alterniflora
(N.America)

S. maritima
(Europe)

S. townsendii (sterile hybrid)

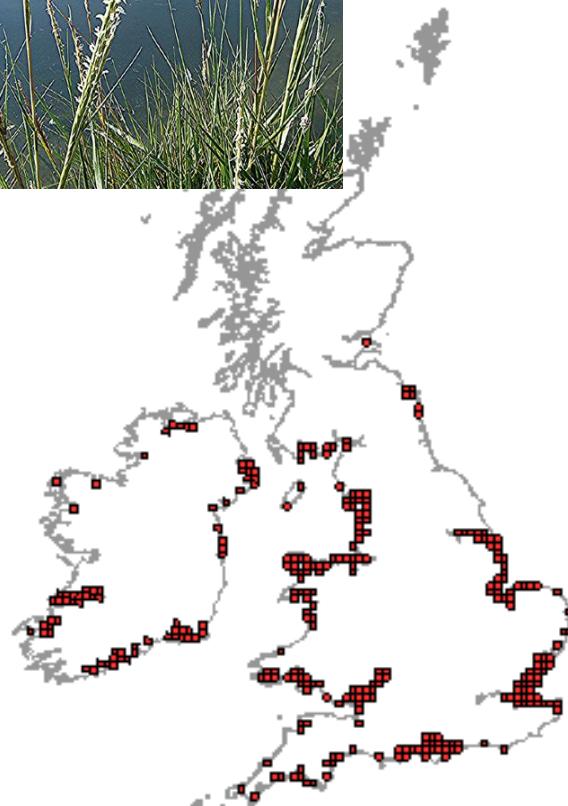

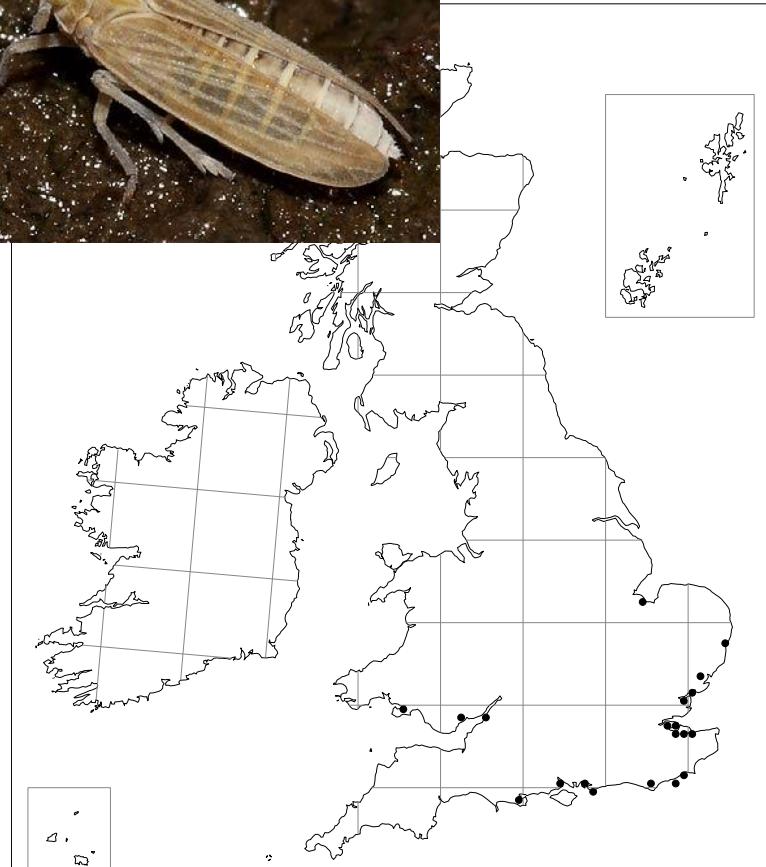

S. anglica (fertile allopolyploid)

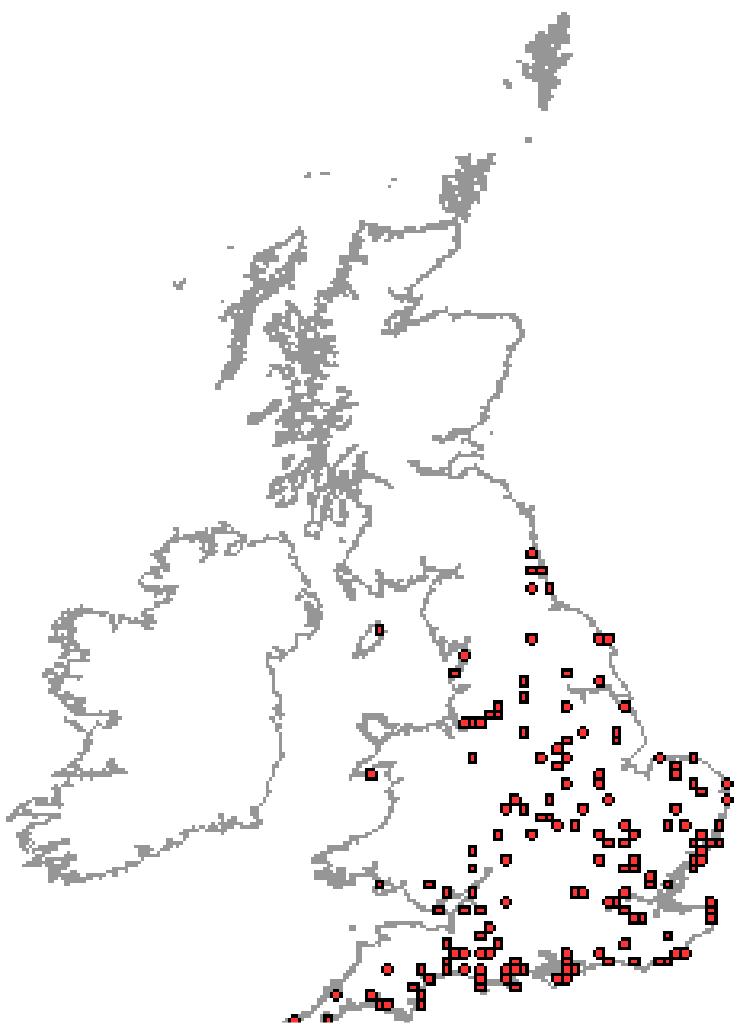

Spartina anglica

Prokelisia marginata on cordgrass, *Spartina anglica*

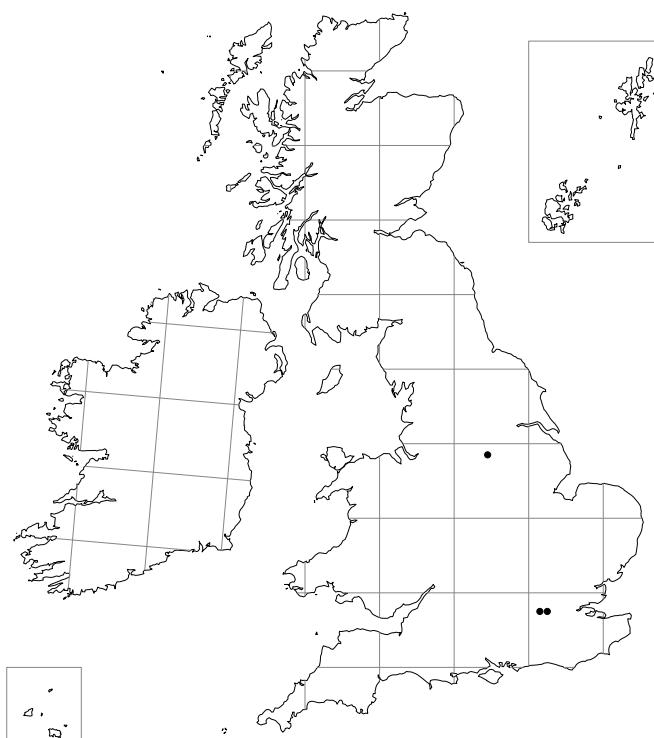

Conifer specialists

- Western conifer seed bug
Leptoglossus occidentalis
- Native to North America
- First record in Britain in 2008
- Record on-line

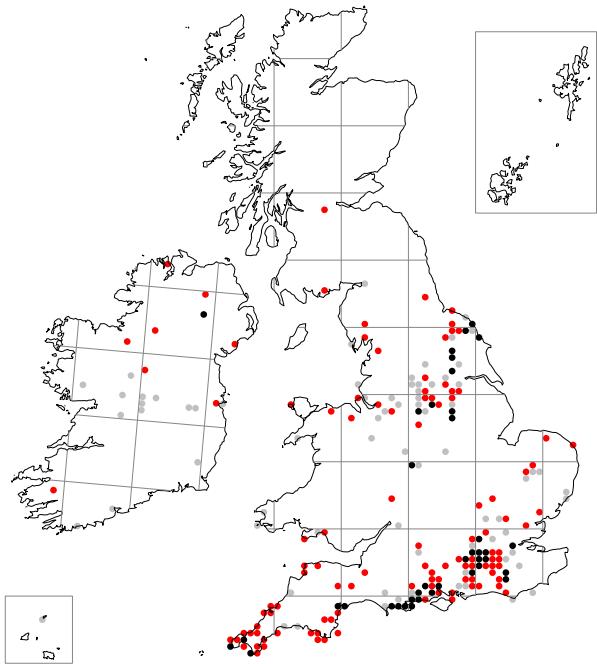

Eremocoris fenestratus

- Historically associated with juniper in the Chilterns
- Not seen since 1960s
- Rediscovered in 2010 in London
- Associated with cypress, a non-native foodplant
- Recent records refer to new colonists
- Probable horticultural introduction, perhaps via Kew Gardens

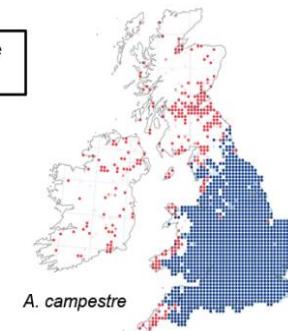

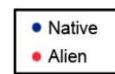

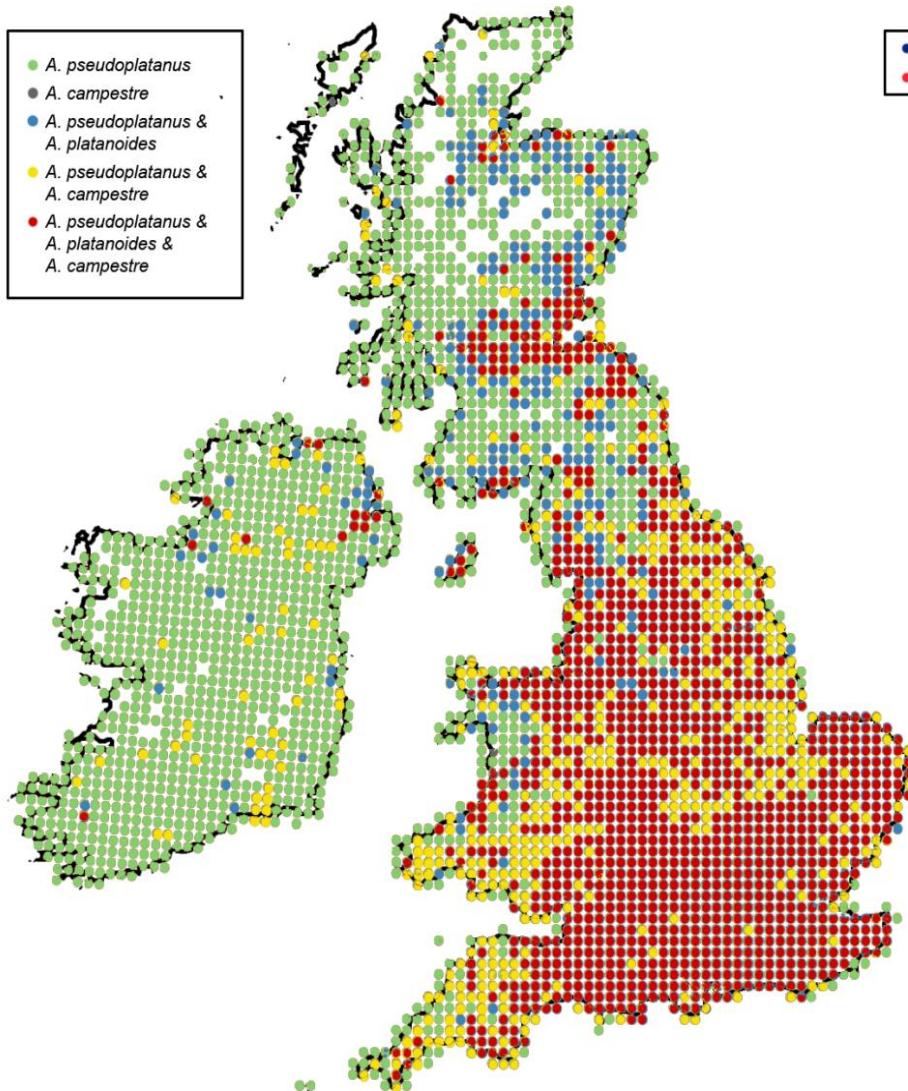

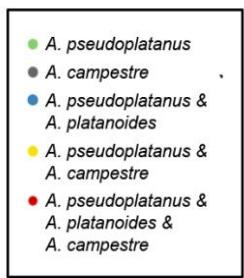

Chilocorus bipustulatus

● Before 1990
● Before and after 1990
● After 1990

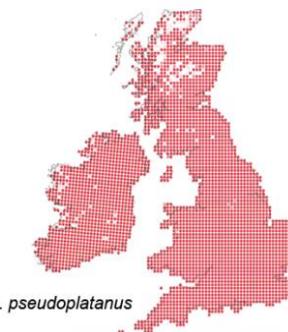

- Increasingly found on cypress
- Species complex?

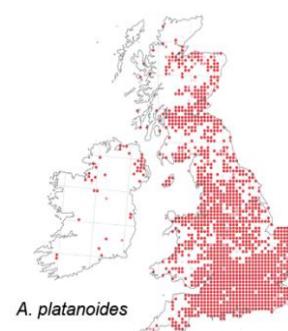

Insect communities on *Acer* species

A. campestre

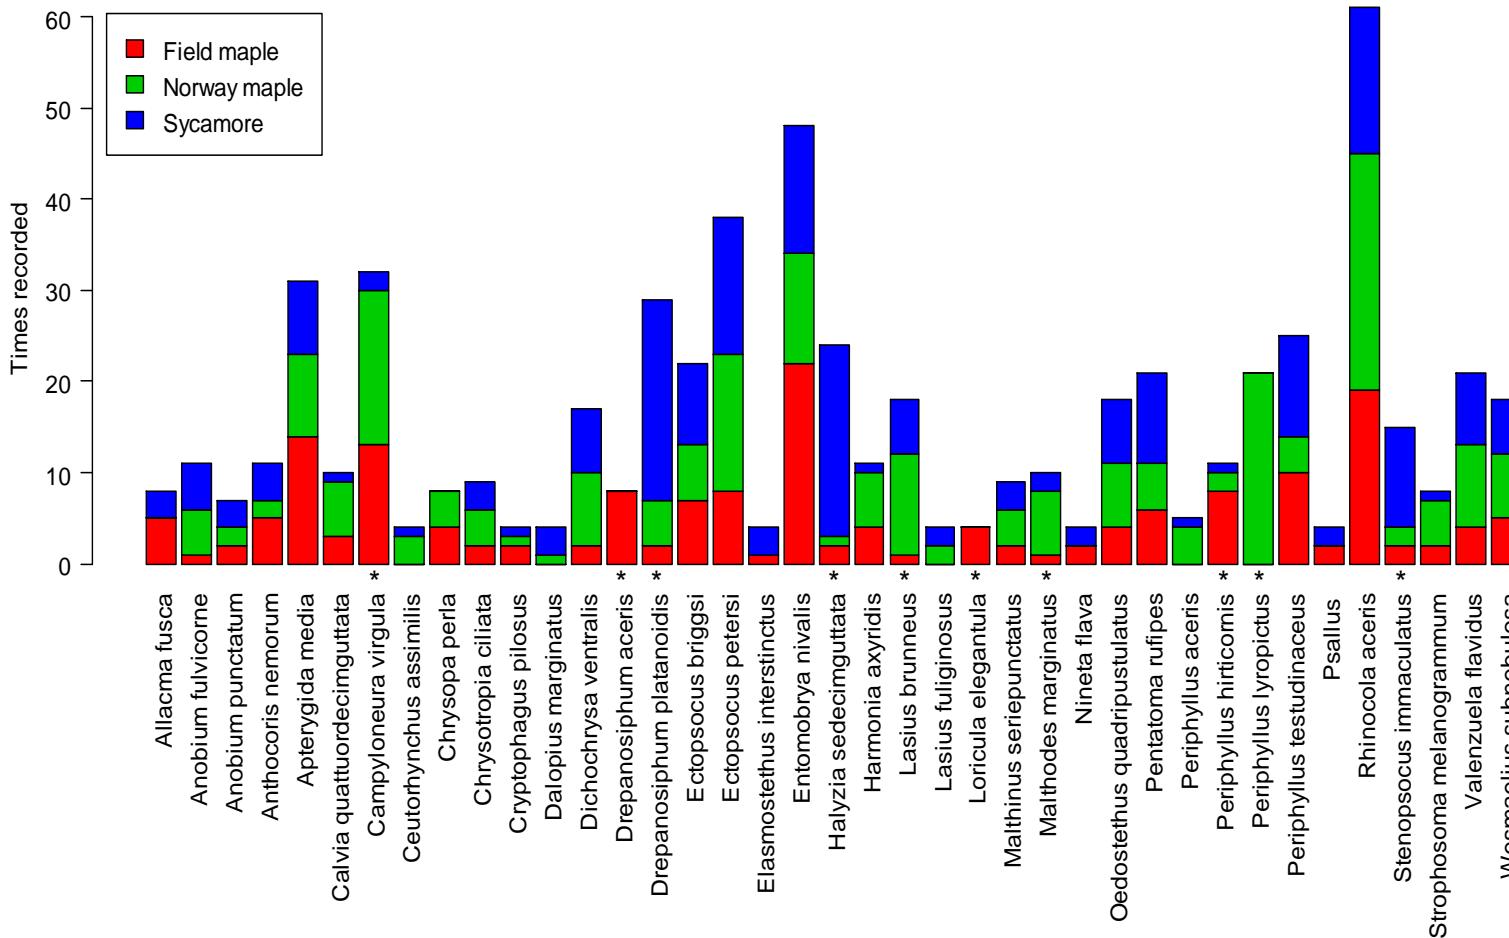

A. pseudoplatanus

A. platanoides

Similarity of insects on *Acer* species

Clough, N. (2012) M.Sc.

Terrestrial Heteroptera Recording Scheme for Britain & Ireland

There are now three recording schemes for Heteroptera, two dealing with the terrestrial species and the third covering the water bugs. The first column of the systematic list indicates which of these schemes each species belongs to.

1. Terrestrial Heteroptera (Shieldbugs & allies)

- Includes around 60 species in the following families : Pentatomidae, Acanthosomatidae, Cydnidae, Scutelleridae, Thyreocoridae, Coreidae, Rhopalidae, Alydidae, Stenocephalidae and Pyrrhocoridae

Please send all records to Tristan Bantock at:

records@britishbugs.org.uk

2. Terrestrial Heteroptera (Plantbugs & allies)

- Includes around 400 species in the following families : Miridae, Lygaeidae, Aradidae, Anthocoridae, Berytidae, Nabidae, Reduviidae, Ceratocombidae, Cimicidae, Microphysidae, Piesmatidae and Tingidae

Please send all records to Jim Flanagan at:

jimflanagan@btinternet.com

3. Aquatic Heteroptera (Waterbugs & allies)

- Includes around 90 species in the following families : Aepophilidae, Aphelocheiridae, Corixidae, Dipsocoridae, Gerridae, Hydrometridae, Hebridae, Mesovelidae, Nepidae, Naucoridae, Notonectidae, Pleidae, Veliidae and Saldidae
- Please send all records to Tony Cook at:

tony.cook20@btinternet.com

Auchenorrhyncha Recording Scheme for Britain & Ireland

Leafhoppers, planthoppers, froghoppers, treehoppers & cicadas

The Auchenorrhyncha Recording Scheme now has a dedicated website at ledra.co.uk, which contains a wealth of information about this group of insects.

All records should be sent to Alan Stewart at:

a.j.a.stewart@sussex.ac.uk

A new recording scheme for Psyllids

As of 2012, a recording scheme has been set up for psyllids, which will be run by Joe Botting. All records should be sent to him at:

ukpsyllids@yahoo.co.uk

Summary

- Most phytophagous insects are specialist
- Many insects in Britain are at northern range edge
 - Evidence of insects undergoing northward range expansion
- Some changes in phytophagous insect distribution reflect changing flora
 - Many alien insects are associated with alien plants
- Opportunities for recording insects and plants
