BRITISH GEOLOGICAL SURVEY

The full range of Survey publications is available from the BGS Sales Desks at Nottingham and Edinburgh; see contact details below or shop online at www.thebgs.co.uk

The London Information Office maintains a reference collection of BGS publications including maps for consultation.

The Survey publishes an annual catalogue of its maps and other publications; this catalogue is available from any of the BGS Sales Desks.

The British Geological Survey carries out the geological survey of Great Britain and Northern Ireland (the latter as an agency service for the government of Northern Ireland), and of the surrounding continental shelf, as well as its basic research projects. It also undertakes programmes of British technical aid in geology in developing countries as arranged by the Department for International Development and other agencies.

The British Geological Survey is a component body of the Natural Environment Research Council.

Foreword

The Scottish Journal of Geology evolved out of a merger between the Transactions of the Edinburgh Geological Society and the Transactions of the Geological Society of Glasgow. It contains a wealth of papers on the Geology of Scotland and beyond.

This work resulted from the indexing of all articles from a range of UK core journals for the British Geological Survey catalogue.

The index is in two parts: a listing of papers by volume and page number and an index by author.
