The full range of Survey publications is available from the BGS Sales Desks at Nottingham, Edinburgh and London; see contact details above or shop online at www.geologyshop.com

The London Office also maintains a reference collection of BGS publications, including maps, for consultation.

The Survey publishes an annual catalogue of its maps and other publications; this catalogue is available from any of the BGS Sales Desks.

The British Geological Survey carries out the geological survey of Great Britain and Northern Ireland (the latter as an agency service for the government of Northern Ireland), and of the surrounding continental shelf, as well as its basic research projects. It also undertakes programmes of British technical aid in geology in developing countries as arranged by the Department for International Development.

The British Geological Survey is a component body of the Natural Environment Research Council.

PREFACE

Welcome to the latest edition of World Mineral Production, which includes global mineral production data for 2014 and is a continuation of the dataset that began in 1913.

This publication is compiled from a comprehensive database, maintained by the British Geological Survey, through which we aim to provide a reliable, comprehensive and continuous set of data covering most of the minerals that enter international trade. In this volume we have set out the production figures by country for more than 70 mineral commodities, over the five-year period from 2010 to 2014. The objective of this series remains to present the latest production information obtained from official bodies in individual countries, although other sources are also used to ensure completeness and accuracy. The cooperation afforded to the British Geological Survey by numerous national and international organisations is gratefully acknowledged.

As always, the statistics contained in this latest volume reveal some interesting trends in the global outputs of several mineral commodities. For example, the implementation of a new mining law in Indonesia prohibiting the export of unprocessed ores is clearly reflected in the production data for mined nickel and bauxite, with the former falling by 21 per cent and the latter by nearly 13 per cent. Indonesia's output of these two ores fell by 75 per cent and 96 per cent respectively. Although ore production increased in other countries, this was insufficient to compensate for the reduced output from Indonesia. Other notable decreases in world production were for mined antimony (reduced by 19 per cent between 2013 and 2014), fluorspar (reduced by 17 per cent) and platinum group metals (reduced by approximately 18 per cent). The decline in platinum group metals production was due to a reduction in output from South Africa, whilst China reduced production of antimony and fluorspar.

Conversely, the production of many other mineral commodities increased in 2014 compared to 2013. For example the world's output of smelter copper increased by 22 per cent, mined bismuth by 21 per cent and mercury by just under 21 per cent. The increased bismuth production was primarily due to a new mine opening in Vietnam, while the other two are due to significant increases in output from China, equating to a 54 per increase in smelter copper and a 25 per cent increase in the production of mercury.

Mercury and smelter copper also feature prominently when examining the production trends over the five year period covered by this volume. Global output of mercury has increased by 38 per cent between 2010 and 2014, while smelter copper increased by nearly 32 per cent over the same period. Other notable production increases over the five year period included phosphate rock and tungsten (a 35 per cent increase each), refined nickel (nearly a 33 per cent increase) and potash (a 30 per cent increase). Aside from China, other countries that have contributed significantly to these increases in global production are Brazil and Madagascar (smelter

copper and refined nickel), Russia (potash), Canada (potash and tungsten), New Caledonia (refined nickel) and Spain (tungsten). We look forward to adding the United Kingdom to the statistics for tungsten next year, following the first shipments of concentrates from the newly opened Drakelands Mine at the Hemerdon Project in Devon in 2015.

However, over the five year period covered by this volume the production of some mineral commodities has significantly declined. For example, the production of platinum group metals declined by nearly 23 per cent between 2010 and 2014, fluorspar decreased by 14 per cent and zirconium decreased by 10 per cent. As noted above, the reduction in global production of platinum group metals is partially due to a fall in output from South Africa, but Russia's production has also declined over the five year period by 27 per cent. The decline in global output of fluorspar is principally caused by a decrease in China's production, but the fall in the production of zirconium is due to reductions in outputs from a number of countries; the most notable in percentage terms are Sri Lanka (reduced by 96 per cent over the five years) and Vietnam (reduced by 71 per cent).

Concern surrounding the worldwide security of supply of minerals, which has been evident for a few years now continues. Particular interest focusses on the so called 'critical' minerals, i.e. those elements that are essential for new and/or green technologies. New policies and programmes of supporting research have continued to be developed across the entire worldwide supply chain, with the common aims of diversifying the supply base, improving resource efficiency (which includes, but is not limited to, recycling), and developing alternatives for the most constrained elements both in terms of substituting materials and other technologies.

During the past year, the BGS has been involved with a range of raw materials-related research, including the conclusion of the 'European Intelligence Network on the Supply of Raw Materials' project (Minerals4EU); the deliverables from which included a new digital European Minerals Yearbook accessible at: www.minerals4eu.brgm-rec.fr/m4eu-yearbook/theme_selection.html. This new and innovative compilation combines, for the first time statistical data relating to resources, reserves, exploration and waste flows, as well as production and trade of primary minerals. In addition, BGS involvement continues in the European rare earth element project (EURARE; www.eurare.eu) and Blue Mining (www.bluemining.eu), which is focussed on sustainable deep sea mining. New raw materials-related research involving BGS includes the Mineral Intelligence Capacity Analysis (MICA) project and the next update of the European Commission's list of critical raw materials.

As always, I would welcome any comments and suggestions that you have relating to this volume which might help us to meet your ongoing needs.

EXPLANATORY NOTES

Coverage

World Mineral Production covers the majority of economically important mineral commodities. For each commodity constant efforts are made to ensure that as many producing countries as possible are reported. For some commodities, where statistics on production are not publicly available, estimates are made. Users of this compilation are advised that more statistical information than can be included in a publication of this nature is held in the British Geological Survey files and is available for consultation. Historical data (from 1913 for many commodities) can be obtained from the predecessors to this series entitled *World Mineral Statistics* and the *Statistical Summary of the Mineral Industry*. Copies of these publications are available in the World Archive section of the website: www.mineralsUK.com.

Arrangement of countries

Countries are ordered alphabetically in geographical groupings as follows:

Europe
Africa
North and Central America, including the Caribbean
South America
Asia
Australasia, including the Pacific Islands

Metals

Mine production of many metals is expressed in terms of metal content. This is clearly indicated at the head of the table, adjacent to the unit used. For aluminium, cobalt, copper, iron, lead, nickel, tin and zinc, mine production and metal production are shown in separate tables. Unless otherwise specified, metal production statistics relate to metal recovered from both domestic and imported materials, whether primary or secondary, but exclude remelted material wherever possible.

World totals

For certain minerals and metals no world total is shown due to the non-availability of certain individual country totals.

Exclusion of Warranty

Use by recipients of information provided by the BGS, is at the recipients' own risk. BGS has taken care to ensure that information provided is as free from error as is reasonably practical. In view of the disparate sources of information at BGS's disposal, including such material donated to BGS, that BGS accepts in good faith as being accurate, the Natural Environment Research Council (NERC) gives no warranty, expressed or implied, as to the quality, accuracy, performance, and merchantability of the information supplied, or to the information's suitability for any use whether made known to BGS or otherwise. NERC/BGS accepts no liability whatever in respect of loss, damage, injury or other occurrence however caused.

Acknowledgements

Compilation of this volume of mineral statistics has been possible only by obtaining information from a very large number of organisations throughout the world, chiefly home and overseas government departments and specialist national or international authorities concerned with particular sectors of the minerals or metals industries. To all these bodies the British Geological Survey expresses its grateful acknowledgement for the information made available, whether

in published form or provided by direct correspondence. Particular acknowledgement is made to the Mines Departments and other government agencies of many countries whose regular statements, yearbooks and other reports are worthy of direct consultations by readers in search of detail.

Specialist commodity organisations which have kindly allowed information to be reproduced include the International Copper Study Group, the International Lead and Zinc Study Group, the International Nickel Study Group, the Barytes Association and the International Fertilizer Industry Association Ltd. In a few instances, information on specific commodities has been obtained directly from company sources. The co-operation of other members of the International Consultative Group on Non-Ferrous Metal Statistics is also gratefully acknowledged.

Supplementary information is also obtained from publications dealing with a wider range of commodities such as Société de l'Industrie Minérale, *Annuaire Statistique Mondial des Minéraux et Métaux*; World Bureau of Metal Statistics, *World Metal Statistics* and, *Metallstatistik*; publications of the Interstate Statistical Committee of the CIS, the United States Geological Survey, and UN agencies.

In addition, information has been obtained from the websites of the following organisations, companies, statistical offices and government departments: United Nations; BP Plc; Eurofer; Eurostat; Instituto Latinoamericano del Fierro y el Acero; International Iron and Steel Institute; Kaolin & Plastic Clays Europe; Kimberley Process; World Nuclear Association; African Development Bank; Agnico Eagle Mines; Altona Mining; Aluminium de Greece; Amara Mining plc; Altyntau; Anglo American; AngloGold Ashanti; ARMZ; Aura Minerals Inc; Avocet Mining plc; Belvedere Resources; BHP Billiton; Breakwater Resources; Centamin; Centerra Gold; Consolidated Murchison; CNW Group; CZP; Dominion Salt; Dragon Mining; Dundee Precious Metals; Eagle Graphite; ElektroZinc; Endeavour Mining; Endomines; ENRC; Eramet; Exxaro; Eurozinc Mining Corporation; Evraz; Falconbridge Limited; First Quantum; Glamis Gold; Glencairn Gold; Glencore Xstrata; GoldBridges; Goldcorp Inc; Iamgold Corporation; Inmet Mining; IRC Group; Kazzinc; Kazakhmys; Lappland Goldminers; Lundin Mining; MMG; Nevsun; New Boliden; Nickel Asia; Nordgold; Norilsk Nickel; Norsk Hydro; Nyrstar; Orosur Mining Inc; Outokumpu; Paladin Energy Ltd; PanAust Mining; Phosagro; Phosphate Resources Ltd; Polymetal Internationa; Qatalum; Qatar Steel Company; RandGold Resources; Resolute Mining; Rich Metal Group; Rio Narcea; Rio Tinto; Ronphos Corporation; RNC Gold; Rusal; Semafo; Sherritt Internationa; SMR; SMZ company; Stillwater Mining; Sun-gold; Talvivaara; UMMC; Uralkali; Vitmetco; Weatherly International Plc; Aluar Aluminio Argentino, Argentina; Alumbra, Argentina; Institute of Argentinean Petroleum and Gas, Argentina; Institute of Argentinean Steel, Argentina; Acero Argentinos; Northern Territory Government, Australia; Department of Primary Industries Victoria, Australia; Mineral Resources Tasmania, Australia; Bureau of Resources and Energy Economics, Australia; Vereinigung der Österreichischen Zementindustrie, Austria; Department of Statistics of the Bahamas; Energy Bangla, Bangladesh; Petrobangla, Bangladesh; Central Bank of Barbados; Federation de l'Industrie Cimentiere Belge, Belgium; Belgian Steel Federation; Statistics Belgium; Instituto Nacional de Estatística Bolivia; Câmara Boliviana de Hidrocarburos, Bolivia; Ministry of Mining and Metallurgy, Bolivia; Republika Srpska Institute of Statistics, Bosnia & Herzegovina; Agency for Statistics; Bosnia & Herzegovina; Departamento Nacional De Producao Mineral, Brazil; Grupo

Units

The Statistics shown in this volume are expressed in metric units. The following factors are given for converting to non-metric units:

tonnes $\times 0.9842$ = long tons

tonnes $\times 1.1023$ = short tons

kilograms $\times 2.2046$ = pounds

kilograms $\times 32.1507$ = troy ounces

cubic metres $\times 35.3147$ = cubic feet

1 tonne of crude petroleum equals on average 7 barrels of crude petroleum.

1 flask mercury = 34.5 kilograms

See notes on following page

Production of bentonite and fuller's earth

Notes

- (1) Bentonites consist of montmorillonite (one of the smectite group of clay minerals) and occur in two main varieties, calcium bentonite, the most commonly occurring, and sodium bentonite, industrially the more important
 - (2) Calcium bentonite can be converted to sodium bentonite by a sodium-exchange process
 - (3) In some countries, such as the United Kingdom, calcium bentonite is known as fuller's earth, a term which is also used to refer to attapulgite, a mineralogically distinct clay mineral but exhibiting similar properties
 - (4) In addition to the countries listed, Algeria, France and Iran may produce fuller's earth
- (a) Including attapulgite and sepiolite
 (b) Years ended 30 June of that stated
 (c) Smectite
 (d) Sales
 (e) Sold or used by producers
 (f) Years ended 31 March following that stated
 (g) Years ended 20 March following that stated

Production of beryl

tonnes (metric)

Country	2010	2011	2012	2013	2014
Madagascar (a)	* 12	* 12	* 16	* 16	* 16
Mozambique	57	58	58	* 60	* 60
Zambia	* 3	* 1	* 2	* 2	* 2
USA (b)	4 460	5 920	5 570	5 910	* 5 900
China	* 550	* 550	* 550	* 550	* 550

Notes

- (a) Includes ornamental and industrial products
 (b) Includes bertrandite ore, calculated as equivalent to beryl containing 11% beryllium oxide

Mine production of bismuth

tonnes (metal content)

Country	2010	2011	2012	2013	2014
Armenia	3	3	4	4	4
Bulgaria	* 3	* 3	* 3	* 3	* 3
Russia	* 50	* 45	* 45	* 45	* 45

Vietnam	—	—	—	—	* 400
World total	3 300	3 100	3 900	2 800	3 400

Notes

- (1) The figures in this table are in some instances derived from reported bismuth content of refined and impure metal plus recoverable in ores and concentrates exported
- (2) Production for some countries may include bismuth produced from imported ores but it is thought that any resulting duplication is insignificant in the countries shown

(a) Metal production

Notes

(1) There is no international agreement as to the separate definition of lignite and brown coal. In some cases they are distinguished.
Elsewhere both may be aggregated under one or other term

- (a) Spitzbergen: not including production from mines controlled by Russia
- (b) Excluding production in Kosovo
- (c) Including anthracite
- (d) Years ended 30 June of that stated
- (e) Includes a small amount of refuse recovery
- (f) Including beneficiated and directly shipped material
- (g) Years ended 31 March following that stated
- (h) Years ended 20 March following that stated
- (i) Years ended 15 July of that shown
- (j) Including lignite
- (k) Including sub-bituminous

Notes

- (1) There is frequently a considerable disparity between the cobalt content of ore raised and cobalt actually recovered
- (2) Figures in this table relate where possible to cobalt recovered. The principal exceptions to this are Brazil and New Caledonia, the figures for which relate to cobalt in ore raised

(a) Metal

(b) Years ended 30 June of that stated

Production of cobalt metal

tonnes (metric)

Country	2010	2011	2012	2013	2014

Notes

(1) In addition to the production listed above, several countries, including the United Kingdom, Finland and France, are known to produce substantial amounts of cobalt compounds

(a) Some metal production in China is recorded in Belgium

(b) Excludes white alloy and matte which are believed to be further processed in Belgium and elsewhere

(c) Includes metal and metal contained in sulphate

(d) Including oxides

Notes

- (1) Figures relate to both primary and secondary refined copper, whether electrolytic or fire refined. Metal recovered from secondary materials by remelting alone is excluded
(2) In addition to the countries listed, Albania and Colombia produce refined copper

(a) Years ended 31 March following that stated

Notes

- (1) This table does not show production of synthetic diamond
- (2) So far as possible the amounts shown include estimates for illegal production
- (3) Production of diamond from Ivory Coast was under United Nations sanctions from 2004 until 2013. It is believed illegal production may have continued during this period but it is not possible to estimate the quantity involved

- (a) Including artisanal production
- (b) Currently under temporary suspension by the Kimberley Process and not trading in rough diamonds; however it is unclear whether production has actually stopped
- (c) Years ended 31 March following that stated

Notes

- (1) In addition, the USA produced the following amounts of fluorspar equivalent in fluorosilicic acid derived from processing phosphate rock ('000 t): 2010:128; 2011: 124; 2012: 130; 2013: 131; 2014: 131

- (a) Years ended 30 June of that stated
- (b) Including beneficiated and directly shipped material
- (c) Years ended 31 March following that stated
- (d) Years ended 20 March following that stated

Production of primary gallium

tonnes (metric)

Accurate data for gallium is difficult to obtain because it is produced only as a by-product of bauxite or zinc processing using proprietary techniques and the majority of producers do not report production figures. The leading producing countries are believed to be China, Germany and Ukraine, with smaller quantities produced in the Republic of Korea, Russia, Hungary and Japan.

The following table provides the currently available information but this is incomplete. The United States Geological Survey estimates total world primary production as: 2010, 182 tonnes; 2011, 292 tonnes; 2012, 273 tonnes; 2013, 390 tonnes and 2014, 440 tonnes

There is also believed to be significant production of refined gallium from scrap recycling, particularly in China, Japan, United Kingdom and USA.

Notes

- (1) In several countries substantial amounts of gold produced in small operations are not recorded in the official statistics used when compiling this table
- (2) In addition to the countries listed, Benin, Central African Republic, Congo, Uganda, Oman and Taiwan produce less than 100 kg gold per year
- (3) In addition to the countries listed, Cambodia, El Salvador, Haiti, Macedonia, Malawi, Pakistan, Paraguay, Portugal, and South Sudan may produce gold.

- (a) Metal production
- (b) Years ended 7 July of that stated
- (c) In addition some gold produced by artisanal mining
- (d) Contained in blister copper, refinery muds and electrolytic copper
- (e) Year ended 30 November of the year stated
- (f) Years ended 31 March following that stated

Notes

- (1) Some countries produce large quantities of synthetic gypsum. Where possible, this output is excluded from the table
(2) In addition to the countries listed, Japan may also produce gypsum.

- (a) Including anhydrite
- (b) Excluding output from the region east of the River Nistru and the Municipality of Bender
- (c) Sales
- (d) Years ended 7 July of that stated
- (e) Years ended 31 March following that stated
- (f) Including selenite
- (g) Years ended 20 March following that stated
- (h) Years ended 30 June of that stated

Notes

- (1) Unless otherwise indicated, these figures include production from scrap
- (2) Small amounts of steel are believed to be produced in Sri Lanka

- (a) Production from the region east of the River Nistru
- (b) Years ended 31 March following that stated

Notes

- (1) Data relate to refined nickel plus the nickel content of ferro-nickel, nickel oxide and nickel salts
(2) In addition to the countries listed, the USA produces some nickel as a refinery by-product

Notes

(1) The figures shown in this table include natural gas liquids

- (a) From oil shale
- (b) Sudan and South Sudan separated on 9 July 2011
- (c) Including natural gas liquids
- (d) Entirely natural gas liquids
- (e) Years ended 31 March following that stated
- (f) Including oil from shale and coal
- (g) Including shares of production from the Neutral Zone
- (h) Years ended 30 June of that stated

Notes

(1) So far as possible the figures in this table exclude flared or reinjected gas

- (a) Sales
- (b) Dry gas
- (c) Years ended 30 June of that stated
- (d) Years ended 31 March following that stated
- (e) Including one-half of the output of the Neutral Zone

Notes

- (1) Wherever possible, figures relate to quantities of platinum group metals thought to be recovered from ores originating in the country stated
 - (2) Figures for metal production are only given for countries where recovery is thought to be based predominantly on domestic materials or on imported materials which have not been recorded as mine production elsewhere in the table
 - (3) In addition to the production listed, concentrates produced in Spain, and possibly other countries, are believed to be processed in China to recover platinum group metals
- (a) Sales from mine production and stocks
 (b) Years ending 7 July of that stated
 (c) Platinum group metals; all forms

Production of rare earth oxides

tonnes (metric)

Country	2010	2011	2012	2013	2014
Russia	1 496	1 444	2 131	1 443	2 134
USA	—	—	1 800	3 300	* 4 200
Brazil	* 160	* 188	* 134	—	—
China (a)	* 118 900	* 105 000	* 100 000	* 95 000	* 95 000
Malaysia	471	498	114	229	221
Australia (b)	—	2 188	2 612	970	3 965

Note(s)

- (1) All the figures in this table are either reported as rare earth oxides or are calculated to rare earth oxide equivalent.
- (2) Prior to the 2005-2009 edition of this book, a table for the production of 'rare earth minerals' was included rather than the current 'rare earth oxides'. Users should exercise caution when comparing statistics over longer time periods.
- (3) Although rare earth minerals are believed to be extracted in other countries, there is insufficient evidence to estimate the quantities of contained oxides.
- (4) Where possible, data are shown against the country where the mineral is mined.

(a) Includes production from iron ore extraction, bastnasite concentrates and ion absorption clays

(b) Years ending 30 June of that stated

Notes

- (1) This table does not include production of refined salt
(2) Salt is known to be produced in many countries for which statistics are not available.

- (a) Salt; all forms
- (b) Years ended 30 June of that stated
- (c) Years ended 7 July of that stated
- (d) Lake salt
- (e) Sea salt
- (f) Exports
- (g) Including salt in brine
- (h) Sold or used by producers
- (i) Seasons beginning in November and ending in May of the year stated.
- (j) Years ended 31 March following that stated
- (k) Years ended 20 March following that stated

Production of selenium metal

Nepal Kyanite (d)	* 24	25	29	19	12

Notes

- (1) A number of other countries produce sillimanite minerals but details of output are not reported
- (2) In addition to the countries listed above as producing sillimanite minerals, synthetic mullite is believed to be produced in Brazil, Germany and Hungary
- (3) Production capacity for synthetic mullite also exists in China, India, Japan, the USA and the United Kingdom but output is believed to be zero.

- (a) Including related minerals
- (b) Including beneficiated and directly shipped material
- (c) Years ended 31 March following that stated
- (d) Years ending 15 July of that stated

Notes

- (1) Niobium and tantalum minerals are believed to be produced in Namibia and South Africa.
- (2) The figures in this table refer to gross tonnage of tantalum and niobium concentrates, except where otherwise indicated
- (3) Tantalum is also recovered from tin slags and is believed to have accounted for approximately 20% of raw material supplied

(a) Years ended 7 July of that stated

(b) Excluding Russia

See notes on following page

Production of titanium minerals

Notes

- (1) The figures in this table refer to gross tonnage of titanium concentrates
- (2) Some ilmenite is converted to synthetic rutile in Australia, India, Japan and USA
- (3) In 2014 South Africa produced an estimated 700 000 tonnes of slag (85% TiO₂) and Canada produced an estimated 1 000 000 tonnes of slag (80-95% TiO₂)

- (a) Canada produces some ilmenite which is sold as such and not processed into slag, but tonnages are small
- (b) It is believed that the majority of this is processed into slag.
- (c) Years ended 31 March following that stated
