

The Ludlow Series (Upper Silurian) of the type area

Compiled by Dr Stewart Molyneux, British Geological Survey.

This introductory page contains hypertext links to a number of other files, each of which contains information relating to some aspect of the Upper Silurian Ludlow Series in its type area, around the town of Ludlow, in the Welsh Borderland of Great Britain.

- Chronostratigraphy, geochronology, lithostratigraphy, methods of correlation (biostratigraphy and non-biostratigraphical methods) and important sections are all covered.
- The different methods of correlation are integrated in a holostratigraphic scheme which is applicable to the type area, and may have wider utility throughout the Welsh Borderland.
- The whole work is supported by a bibliography.

Select one of the following for further information on that aspect of the stratigraphy of the type Ludlow Series.

[Bibliography](#)

[Chronostratigraphy](#)

[Geochronology](#)

[Holostratigraphy](#)

[Lithostratigraphy](#)

[Methods of correlation](#) (biostratigraphy, bentonites, chemostratigraphy)

[Sections](#)

See: [‘Outcrop of the Ludlow Series in mid Wales and the Welsh Borderland’](#) for the location of the type area.
