The full range of Survey publications is available from the BGS Sales Desks at Nottingham, Edinburgh and London; see contact details above or shop online at www.geologyshop.com

The London Office also maintains a reference collection of BGS publications, including maps, for consultation.

The Survey publishes an annual catalogue of its maps and other publications; this catalogue is available from any of the BGS Sales Desks.

The British Geological Survey carries out the geological survey of Great Britain and Northern Ireland (the latter as an agency service for the government of Northern Ireland), and of the surrounding continental shelf, as well as its basic research projects. It also undertakes programmes of British technical aid in geology in developing countries as arranged by the Department for International Development.

The British Geological Survey is a component Institute of UK Research and Innovation (UKRI).

PREFACE

Welcome to the latest edition of World Mineral Production, which includes global mineral production data for 2018 and is a continuation of the dataset that began in 1913.

This publication is compiled from a comprehensive database, maintained by the British Geological Survey, through which we aim to provide a reliable, comprehensive and continuous set of data covering most of the minerals that enter international trade. In this volume we have set out the production figures by country for more than 70 mineral commodities, over the five-year period from 2014 to 2018. The objective of this series remains to present the latest production information obtained from official bodies in individual countries, although other sources are also used to ensure completeness and accuracy. The cooperation afforded to the British Geological Survey by numerous national and international organisations is gratefully acknowledged.

Whilst overall changes in the world production of most minerals between 2017 and 2018 are less than 10 per cent, there are notable exceptions. The largest increases are for the commodities used to manufacture batteries – lithium (an increase of 25%), cobalt (up 18%), graphite and nickel (both increased by about 13%). In the case of lithium this increase is particularly significant as it follows a major increase in production between 2016 and 2017. Over the five year period covered in this edition, global lithium production has increased by more than 235 per cent (based on Li content). Australia has made a substantial contribution to this increased production, where the opening/re-opening of mines means that there are now six sites producing lithium minerals. However, there have also been notable increases in the production of lithium from Canada, Chile, Zimbabwe and China as well as new production established in Namibia and Nigeria.

In contrast to lithium, the global increase in the mine production of cobalt is more complex, with decreased output from some countries being masked by a 33 per cent increase in production from the Democratic Republic of Congo (DRC). As a consequence, the proportion of the global production originating in the DRC has risen to 65 per cent, its highest level in the five years covered by this edition. For graphite, the increased production between 2017 and 2018 has still not resulted in total world production returning to the levels produced in 2014 and 2015. Notable increases in the production of graphite from Mozambique, Brazil and Namibia have been partially offset by declines elsewhere. The increase in mine production of nickel is largely due to a 134 per cent increase in Indonesia's output following the temporary relaxation of the country's ban on the exports of nickel ore in early 2017.

Despite the general upward trend in world production of most minerals between 2017 and 2018, some have experienced declines in production. There have been

notable decreases in global output of mercury (a decline of 31%), zirconium minerals (down about 15%), iron ore (down 13%) and tungsten (a decline of about 13%). In all these cases, the decreases in production have resulted in 2018 production levels that are lower than in 2014 despite increases in the intervening years. In the case of mercury the decline in production is likely to be directly linked to the Minamata Convention on Mercury, which came into force on 16 August 2017, and aims to protect human health and the environment from mercury emissions.

There is continuing interest and concern surrounding the worldwide security of supply of certain minerals. In 2018 the OECD in its 'Global Material Resources Outlook to 2060' indicated that materials use is projected to more than double by 2060, with metals expected to grow the fastest. They warn about the pressure this will place on the environment, global economies and future gains in well-being. BGS research is evolving to address this challenge, placing particular emphasis on improving understanding of stocks and flows of raw materials (e.g. cobalt, lithium) that are essential for decarbonisation of energy and transport systems. Although metals are an essential component of decarbonisation technologies, their production is currently carbon intensive. This has led the BGS to develop an interest in understanding how sustainable and responsible supply of metals from primary and secondary sources can be improved, and what policies or approaches will be most effective in implementing change.

During the past year, the BGS has continued to be involved with many European partners in several minerals-related research projects, e.g. New geomodels to explore deeper for High-Technology critical raw materials in Alkaline rocks and Carbonatites (HiTech AlkCarb; <http://www.bgs.ac.uk/hiTechAlkCarb/>), Solutions for Critical Raw Materials – a European Expert Network (SCRREEN; <http://scrreen.eu/>) and Optimising quality of information in raw materials data collection across Europe (ORAMA; <https://orama-h2020.eu/>). The BGS is involved in the UKRI-funded Circular Economy Network+ in Transportation Systems (CENTS) which will link academic organisations and industry to identify opportunities for increasing circularity in transport systems across their life cycle.

As always, I would welcome any comments and suggestions that you have relating to this volume, which might help us to meet your ongoing needs.

Karen Hanghøj

EXPLANATORY NOTES

Coverage

World Mineral Production covers the majority of economically important mineral commodities. For each commodity constant efforts are made to ensure that as many producing countries as possible are reported. For some commodities, where statistics on production are not publicly available, estimates are made. Users of this compilation are advised that more statistical information than can be included in a publication of this nature is held in the British Geological Survey files and is available for consultation. Historical data (from 1913 for many commodities) can be obtained from the predecessors to this series entitled *World Mineral Statistics* and the *Statistical Summary of the Mineral Industry*. Copies of these publications are available in the World Archive section of the website: www.mineralsUK.com.

Arrangement of countries

Countries are ordered alphabetically in geographical groupings as follows:

Europe
Africa
North and Central America, including the Caribbean
South America
Asia
Australasia, including the Pacific Islands

Metals

Mine production of many metals is expressed in terms of metal content. This is clearly indicated at the head of the table, adjacent to the unit used. For aluminium, cobalt, copper, iron, lead, nickel, tin and zinc, mine production and metal production are shown in separate tables. Unless otherwise specified, metal production statistics relate to metal recovered from both domestic and imported materials, whether primary or secondary, but exclude remelted material wherever possible.

World totals

For certain minerals and metals no world total is shown due to the non-availability of certain individual country totals.

Exclusion of Warranty

Use by recipients of information provided by the BGS, is at the recipients' own risk. BGS has taken care to ensure that information provided is as free from error as is reasonably practical. In view of the disparate sources of information at BGS's disposal, including such material donated to BGS, that BGS accepts in good faith as being accurate, the Natural Environment Research Council (NERC) gives no warranty, expressed or implied, as to the quality, accuracy, performance, and merchantability of the information supplied, or to the information's suitability for any use whether made known to BGS or otherwise. NERC/BGS accepts no liability whatever in respect of loss, damage, injury or other occurrence however caused.

Acknowledgements

Compilation of this volume of mineral statistics has been possible only by obtaining information from a very large number of organisations throughout the world, chiefly home and overseas government departments and specialist national or international authorities concerned with particular sectors of the minerals or metals industries. To all these bodies the

British Geological Survey expresses its grateful acknowledgement for the information made available, whether in published form or provided by direct correspondence. Particular acknowledgement is made to the Mines Departments and other government agencies of many countries whose regular statements, yearbooks and other reports are worthy of direct consultations by readers in search of detail.

Specialist commodity organisations which have kindly allowed information to be reproduced include the International Copper Study Group, the International Lead and Zinc Study Group, the International Nickel Study Group and the Barytes Association. In a few instances, information on specific commodities has been obtained directly from company sources. The co-operation of other members of the International Consultative Group on Non-Ferrous Metal Statistics is also gratefully acknowledged.

Appendix 2 contains a fuller list of organisations to whom acknowledgement is made.

Units

The Statistics shown in this volume are expressed in metric units. The following factors are given for converting to non-metric units:

tonnes $\times 0.9842$ = long tons
tonnes $\times 1.1023$ = short tons
kilograms $\times 2.2046$ = pounds
kilograms $\times 32.1507$ = troy ounces
cubic metres $\times 35.3147$ = cubic feet
1 tonne of crude petroleum equals on average 7 barrels of crude petroleum.
1 flask mercury = 34.5 kilograms

Note(s)

- (1) Where possible figures in this table show the alumina equivalent (Al₂O₃) of total hydrate produced, whether or not calcined.
- (2) The figures in this table represent alumina produced from bauxite. Alumina-rich materials can also be derived from salt slags formed during the production of secondary aluminium.

- (a) Years ended 31 March following that stated
- (b) Years ended 20 March following that stated

See notes on the following page

Production of bentonite and fuller's earth

Note(s)

- (1) Bentonites consist of montmorillonite (one of the smectite group of clay minerals) and occur in two main varieties, calcium bentonite, the most commonly occurring, and sodium bentonite, industrially the more important.
 - (2) Calcium bentonite can be converted to sodium bentonite by a sodium-exchange process.
 - (3) In some countries, such as the United Kingdom, calcium bentonite is known as fuller's earth, a term which is also used to refer attapulgite, a mineralogically distinct clay mineral but exhibiting similar properties.
 - (4) In addition to the countries listed, Vietnam may produce bentonite and Algeria, France, Iran and Japan may produce fuller's earth.
- (a) Including attapulgite and sepiolite
 - (b) Years ended 30 June of that stated
 - (c) Smectite
 - (d) Sales
 - (e) Sold or used by producers
 - (f) Years ended 31 March following that stated
 - (g) Years ended 20 March following that stated

Production of beryl

tonnes (metric)

Country	2014	2015	2016	2017	2018
Madagascar (a)	* 135	* 140	* 140	* 140	* 140
Mozambique	3	312	181	53	416
Zambia	4	7	5	3	7
USA (b)	6 900	5 100	3 870	3 760	* 3 700
China	* 1 200	* 1 200	* 1 200	* 1 200	* 1 200

Note(s)

- (a) Includes ornamental and industrial products
- (b) Includes bertrandite ore, calculated as equivalent to beryl containing 11% beryllium oxide

Mine production of bismuth

tonnes (metal content)

Country	2014	2015	2016	2017	2018
Armenia	* 4	* 4	* 4	* 4	* 4
Russia	* 45	* 45	* 45	* 45	* 45

World total	3 700	4 300	4 600	5 600	6 000

Note(s)

- (1) The figures in this table are in some instances derived from reported bismuth content of refined and impure metal plus recoverable in ores and concentrates exported.
- (2) Production for some countries may include bismuth produced from imported ores but it is thought that any resulting duplication is insignificant in the countries shown.

(a) Metal production

Lignite	316 692	324 086	313 035	319 487	307 327
World total	8 153 000 000	7 934 000 000	7 472 000 000	7 700 000 000	7 964 000 000

Note(s)

- (1) There is no international agreement as to the separate definition of lignite and brown coal. In some cases they are distinguished. Elsewhere both may be aggregated under one or other term.
 - (2) Data for coking coal is not always distinguished from other types of bituminous coal. The term "bituminous" in this table may include coking coal where the latter is not separately shown.
 - (3) Where no sub-commodity is shown the figures relate to all ranks of coal.
- (a) Spitzbergen: not including production from mines controlled by Russia
 - (b) Excluding production in Kosovo
 - (c) Including anthracite
 - (d) Years ended 30 June of that stated
 - (e) Includes a small amount of refuse recovery
 - (f) Including beneficiated and directly shipped material
 - (g) May also include other types of coal
 - (h) Years ended 20 March following that stated
 - (i) Years ended 31 March following that stated
 - (j) Coal; all forms
 - (k) Years ended 15 July of that shown
 - (l) Including lignite
 - (m) Including sub-bituminous

Note(s)

- (1) There is frequently a considerable disparity between the cobalt content of ore raised and cobalt actually recovered.
- (2) In many countries it is not clear whether cobalt that is known to be present in the extracted ore is subsequently recovered, nor whether the reported figure is contained or recovered cobalt.
- (3) Consequently, the figures in this table may relate either to cobalt recovered or to cobalt contained in ore raised.
- (4) In addition to the countries listed, cobalt is contained within copper ores in Poland but this is not currently recovered.

(a) Metal and/or refined

(b) Years ended 30 June of that stated

Production of refined cobalt

Note(s)

(1) Refined cobalt can be in the form of metal, oxides, carbonates, sulphates and many other compounds. Efforts are made to avoid double-counting but it is not always possible to be certain.

- (a) Some refined cobalt production in China is recorded in Belgium
- (b) Excludes white alloy and matte which are believed to be further processed in Belgium and elsewhere
- (c) Includes metal and cobalt contained in sulphate
- (d) Including oxides
- (e) Carbonate

Australia	511 252	474 963	474 954	386 249	407 618
World total	22 400 000	23 100 000	23 500 000	23 800 000	23 900 000

Note(s)

- (1) Figures relate to both primary and secondary refined copper, whether electrolytic or fire refined. Metal recovered from secondary materials by remelting alone is excluded.
- (2) In addition to the countries listed, Albania and Colombia produce refined copper.

(a) Years ended 31 March following that stated

(b) Years ended 20 March following that stated

(c) Sales

Production of diamond

Carats

Note(s)

- (1) In addition, the USA produced the following amounts of fluorspar equivalent in fluorosilicic acid derived from processing phosphate rock ('000 t): 2014: 114; 2015: 105; 2016: 72; 2017: 64; 2018: 64.

- (a) Years ended 30 June of that stated
- (b) Including beneficiated and directly shipped material
- (c) Years ended 31 March following that stated
- (d) Years ended 20 March following that stated

Production of primary gallium

tonnes (metric)

Country	2014	2015	2016	2017	2018
Germany	16	11	23	—	—
Russia	* 13	* 13	* 13	* 13	* 13
China	* 300	284	171	319	404
Japan	8	6	3	3	3

- (1) Accurate data for gallium is difficult to obtain because it is produced only as a by-product of bauxite or zinc processing using proprietary techniques. As a consequence, this table may not be complete.
- (2) Lower grade production is often subsequently refined to higher grade material which complicates the collection of data as double counting is a significant risk.
- (3) In addition to the above primary production, there is also believed to be significant production of refined gallium from scrap recycling.
- (4) In addition to the countries listed, the Republic of Korea and Ukraine may produce primary gallium.

Production of germanium metal

tonnes (metric)

Country	2014	2015	2016	2017	2018
Finland	17	13	0	—	—
Russia	* 5	* 5	* 6	* 6	* 6
USA (a)	* 3	* 3	* 2	* 3	* 3
China	* 110	94	82	79	95

Note(s)

(1) Germanium is also believed to be recovered from imported or domestic material in Belgium, Canada and Ukraine.

(a) Including production of secondary metal

Mine production of gold

In addition to 'industrial scale' gold mines around the world, a significant quantity of gold is mined by small scale or artisanal producers, both on a legal and illegal basis. In some countries the quantities involved with artisanal mining can be relatively large. The compilation of reliable data for the quantity produced by artisanal mining in each country is difficult, particularly where the actions are illegal. Artisanal mining can be seasonal, temporary and highly variable, on both geographical and temporal scales.

Where possible, the table attempts to include estimates for artisanal mining of gold in order that the calculated world totals are as complete as possible. However, the difficulties noted above mean that these totals cannot be completely accurate and they are consequently rounded to a greater degree than the individual country figures may suggest is appropriate. This is an attempt to convey the level of uncertainty associated with these total figures.

For clarity, additional comments on specific countries are shown below (there may be other countries where artisanal mining also occurs; these comments are not intended to be exhaustive):-

Benin – artisanal gold mining is known to take place but no reliable estimates are available. It has been estimated to be in the region of 20–30 kg per year, but it could be larger in some years.

Burkina Faso – official figures include 306 kg for artisanal mining in 2018; 150 kg in 2017; 235 kg in 2016; 302 kg in 2015; and 208 kg in 2014;. It is believed the actual artisanal production is likely to be higher.

Burma – the figures shown in the table for 2014 to 2017 are reported and are believed to include artisanal mining.

Cameroon – all gold mining is currently small scale or artisanal. Available estimates vary widely, from as low as 500 kg per year to something in the order of 1500 kg or 2000 kg per year.

Central African Republic – artisanal gold mining is known to take place. No reliable estimates are available but it could be in the region of 50-80 kg per year. The figures shown are reported and it is assumed these are artisanal but they may not be fully inclusive in every year.

Columbia – Artisanal mining, both legal and illegal, is quite extensive within Columbia. The government is taking steps to improve the licencing of legal artisanal mining and also to crack down on illegal activities. However, it is not clear whether the reported figures for gold production include artisanally mined gold. It is also possible that illegally mined material is brought into or out of the country without being recorded.

Congo – all gold mining is believed to be small scale or artisanal and it is believed there are more than 200 locations where this occurs. A nominal estimate of 150 kg per year is shown in the table.

Costa Rica – all gold mining is currently artisanal. The figures in the table are reported by an official source.

Democratic Republic of Congo – artisanal mining is quite extensive, the figures shown include estimates for artisanal mining ranging from 4000 to 11000 kg per year.

Equatorial Guinea – artisanal gold mining is very likely to be taking place but no accurate information is available. A nominal estimate of 200 kg per year is included in the table but it could be more or less than this.

Ethiopia – small scale and artisanal gold mining is significant, but not all of it is illegal because some artisanal miners operate under a formal license. A proportion of the gold mined from artisanal sources is sold to the national bank but illicit sales to non-licensed buyers remains widespread. National bank purchases of gold from artisanal sources in fiscal year 2014/15 amounted to 5473 kg; in 2015/16 to 4145 kg and in 2016/17 to 1920 kg. Actual artisanal production could be higher.

France (French Guiana) – the table includes an estimate of 5000 kg per year for artisanal mining which is not included in the official reported figures.

Gabon – attempts to regulate artisanal gold mining are being undertaken with gold from artisanal miners being purchased by a government agency from 2013. The figures in the table include 66 kg for artisanal mining in 2014; 55 kg in 2015; 50 kg in 2016 and 40 kg in 2017. Data for 2018 is all artisanal.

Ghana – gold produced by artisanal mining is purchased by a state-owned marketing organisation but official figures of the quantity vary depending on the source. They are also reported in publications produced by under the Extractive Industry Transparency Initiative (EITI). In the table below the following figures are included for artisanal production: 47,044 kg in 2014; 32,073 kg in 2015; 35,292 kg in 2016; 45,992 kg in 2017 and 37,324 kg in 2018.

Guinea – the figures in the table include reported figures for artisanal mining. However, actual artisanal production may be higher than those reported because it is difficult to distinguish the material derived from artisanal mining within Guinea from that moved across the border from Mali or other countries.

Ivory Coast – efforts are being made within Ivory Coast to rationalise artisanal mining as part of the EITI process. Reports suggest that it varies considerably from year to year and may range between 1000 kg and 10 000 kg per year. A conservative estimate of 2000 kg has been added to reported industrial scale mine output in 2014, 3000 kg in 2015 and 4500 kg per year for 2016 to 2018.

Kenya – The reported figures shown are believed to include artisanal mining but in reality it could be much higher.

Liberia – official figures are believed to include both the industrial mine and artisanal production.

Madagascar – estimates of artisanal mining are in the order of 100 kg to 3000 kg per year.

Mali – the figures include an estimate of 5000 kg per year for artisanal mining for 2014 and 2015 and 6000 kg per year thereafter, but it is likely the real figure varies more than this from year to year.

Panama – artisanal mining is known to occur but no reliable estimates are available. A nominal estimate of 100 kg per year has been included.

Papua New Guinea – official estimates of "alluvial and small scale" mining are approximately 3500 to 4000 kg per year.

Rwanda – it is believed that the reported and estimated figures are actually gold that originated in neighbouring countries but is not recorded in those countries.

South Sudan – artisanal mining is known to occur but reliable estimates are difficult to obtain. It has been estimated as approximately 200 kg per year.

Tanzania – Artisanal mining is known to occur and in 2015 and 2016 was reported as approximately 30 kg per year.

Togo – the reported figures are exports of gold which is transiting through the country. It is believed the majority of this originates in Burkina Faso from artisanal mining but it is not recorded within the production figures for that country. Consequently it is recorded here for completeness. Some artisanal mining is also believed to occur in Togo.

Venezuela – artisanal mining is believed to be quite extensive and increasing. Estimates of quantities vary widely from less than 1000 kg up to 9000 kg per year. The Central Bank aims to purchase all the artisanally mined gold, however, actual output is believed to be larger than the reported figures and therefore higher estimates have been used.

Vietnam – artisanal mining is believed to be taking place at the site of a former industrial mine. No information is available to indicate likely scale.

Mine production of gold

Note(s)

(1) In several countries substantial amounts of gold produced in small and/or artisanal operations are not recorded in the official statistics.

Estimates have been added where possible but these have varying degrees of uncertainty.

(2) In addition to the countries listed Oman produces less than 100kg gold per year.

(3) In addition to the countries listed, Cambodia, El Salvador, Haiti, Malawi, Pakistan, Paraguay and Portugal may produce gold.

Note(s)

- (1) Some countries produce large quantities of synthetic gypsum. Where possible, this output is excluded from the table.
(2) In addition to the countries listed, Indonesia and Vietnam may also produce gypsum.

- (a) Including anhydrite
- (b) Excluding output from the region east of the River Nistru and the Municipality of Bender
- (c) Sales
- (d) Years ended 30 June of that stated
- (e) Years ended 7 July of that stated
- (f) Years ended 31 March following that stated
- (g) Including selenite
- (h) Years ended 20 March following that stated

See notes on the following page

Production of pig iron

Note(s)

(1) The data in this table include sponge iron and direct reduced iron (DRI), where these have been separately identified.

- (a) Includes ferro-manganese
- (b) Including sponge iron

Production of crude steel

Note(s)

(1) In addition, substantial quantities of magnesium compounds are produced by, used and recycled within the process of titanium sponge production. It is believed this relates to the mineral carnallite and/or secondary magnesium chloride compounds.

(2) Magnesium used within the process of titanium sponge production is not marketed as primary magnesium metal and is therefore excluded from this table. Annual quantities are likely to be approximately: Russia 50,000 t, Kazakhstan 10,000 t, Ukraine 10,000 t.

World total	2 800 000	3 300 000	4 000 000	4 000 000	2 800 000

Note(s)

(1) Several countries are believed to have unrecorded production of mercury from copper electrowinning processes and by recovery from effluents.

(a) BGS estimates based on net exports

(b) From copper solvent extraction and electrowinning processes

Production of mica

tonnes (metric)

World total	1 980 000	1 984 000	2 029 000	2 206 000	2 317 000

Note(s)

- (1) Data relate to refined nickel plus the nickel content of ferro-nickel, nickel oxide and nickel salts. It does not include nickel content of nickel hydroxide cake or nickel matte as these are further refined elsewhere.
- (2) In addition to the countries listed, the USA produces some nickel as a refinery by-product.

Note(s)

(1) The figures shown in this table include natural gas liquids.

(a) Including oil from shale and coal

(b) including natural gas liquids

(c) From oil shale

(d) Years ended 31 March following that stated

(e) Including shares of production from the Neutral Zone

(f) Years ended 30 June of that stated

Production of natural gas

Note(s)

(1) In addition to the countries listed, Indonesia and Nigeria are believed to produce phosphate rock.

- (a) Years ended 30 June of that stated
- (b) Including beneficiated and directly shipped material
- (c) Exports
- (d) Including phosphate dust
- (e) Years ended 31 March following that stated
- (f) Years ended 20 March following that stated

Note(s)

- (1) Wherever possible, figures relate to quantities of platinum group metals thought to be recovered from ores originating in the country stated.
 - (2) Figures for metal production are only given for countries where recovery is thought to be based predominantly on domestic materials or on imported materials which have not been recorded as mine production elsewhere in the table.
 - (3) In addition to the production listed, concentrates produced in Spain, and possibly other countries, are believed to be processed in China to recover platinum group metals.
- (a) Sales from mine production and stocks
 (b) Years ending 7 July of that stated
 (c) Platinum group metals; all forms

Australia (c)	3 965	8 799	12 631	16 003	17 754

Note(s)

- (1) All the figures in this table are either reported as rare earth oxides or are calculated to rare earth oxide equivalent.
- (2) Prior to the 2005-2009 edition of this book, a table for the production of 'rare earth minerals' was included rather than the current 'rare earth oxides'. Users should exercise caution when comparing statistics over longer time periods.
- (3) Although rare earth minerals are believed to be extracted in other countries, there is insufficient evidence to estimate the quantities of contained oxides.
- (4) Where possible, data are shown against the country where the mineral is mined.

(a) Includes production from iron ore extraction, bastnasite concentrates and ion absorption clays

(b) Years ending 31 March following that stated

(c) Years ending 30 June of that stated

Note(s)

- (1) This table does not include production of refined salt.
- (2) Salt is known to be produced in many countries for which statistics are not available.

- (a) Sea salt
- (b) Years ended 30 June of that stated
- (c) Years ended 7 July of that stated
- (d) Lake salt
- (e) Exports
- (f) Including salt in brine
- (g) Sold or used by producers
- (h) Years ended 20 March following that stated
- (i) Seasons beginning in November and ending in May of the year stated.
- (j) Years ended 31 March following that stated

Production of refined selenium

tonnes (metric)

Country	2014	2015	2016	2017	2018
Armenia	* 20	* 20	* 20	* 20	* 20
Belgium	* 200	* 200	* 200	* 200	* 200

Nepal					
Kyanite (e)	12	7	1	2	0

Note(s)

- (1) A number of other countries produce sillimanite minerals but details of output are not reported.
- (2) In addition to the countries listed above as producing sillimanite minerals, synthetic mullite is believed to be produced in Brazil, Germany and Hungary.
- (3) Production capacity for synthetic mullite also exists in China, India, Japan, the USA and the United Kingdom but output is believed to be zero.

(a) May include other sillimanite minerals

(b) Including related minerals

(c) Including beneficiated and directly shipped material

(d) Years ended 31 March following that stated

(e) Years ending 15 July of that stated

Note(s)

- (1) Niobium and tantalum minerals are also believed to be produced in Namibia and South Africa.
- (2) The figures in this table refer to gross tonnage of tantalum and niobium concentrates, except where noted.
- (3) Tantalum is also recovered from tin slags and this is believed to have accounted for approximately 20% of raw material.

Note(s)

(1) Figures relate to both primary and secondary metal.

(2) In addition to the countries listed, many countries produce small amounts of secondary metal.

(a) Refined, including alloys

(b) Years ended 31 March following that stated

Note(s)

- (1) The figures in this table refer to gross tonnage of titanium concentrates.
- (2) Some ilmenite is converted to synthetic rutile in Australia, India, Japan and USA.

- (a) Including natural rutile
- (b) It is believed that the majority of this is processed into slag.
- (c) Canada produces some ilmenite which is sold as such and not processed into slag, but tonnages are small
- (d) Years ended 31 March following that stated
- (e) Years ended 30 June of that stated

Note(s)

(1) In this table the term 'zirconium minerals' is understood to mean zircon, unless otherwise stated

- (a) Baddeleyite concentrate
- (b) Including caldasite rock containing zircon and baddeleyite
- (c) Years ending 31 March following that stated
- (d) Conservative BGS estimates, based on exports
- (e) Years ended 30 June of that stated

Note(s)

- (1) So far as possible, these production statistics include construction sand; gravel, pebbles, shingle and flint; crushed stone used for concrete aggregates, roadstone and other construction uses; granules, chippings and powders.
 - (2) Where official sources show more than one series for aggregates the higher series has generally been used in this compilation.
 - (3) Where marine sands and gravels have been identified, these are included.
 - (4) Information may be incomplete or absent due to reporting methods, confidentiality or lack of available information.
 - (5) Production from many small operations are not officially compiled. The minimum number of employees for which establishments are required to report production varies between different countries and can also vary from year to year within a country.
 - (6) Quantities of sand from sand and gravel operations may be discarded due to low demand. This may or may not be included in the statistics.
- (a) Sales
 - (b) Estimated by official source based on a previous year census and the rate of change observed from a sample of quarries in subsequent years
 - (c) Includes an estimate for small producers
 - (d) Includes small quantities for other purposes in Northern Ireland
