The British Geological Survey carries out the geological survey of Great Britain and Northern Ireland (the latter as an agency service for the government of Northern Ireland), and of the surrounding continental shelf, as well as its basic research projects. It also undertakes programmes of British technical aid in geology in developing countries as arranged by the Overseas Development Administration.

The British Geological Survey is a component body of the Natural Environment Research Council.

All communications regarding the content of this publication should be addressed to the Group Manager, Mineral Resources and Applied Geochemistry, British Geological Survey, 64 Gray's Inn Road, London WC1X 8NG (01-242 4531).

The compilations presented in this book are Crown copyright and may not be reproduced in any form without the permission of the Director, British Geological Survey.

PREFACE

This is the eleventh volume of *World Mineral Statistics*. The first was published in 1978 but publication of similar statistical information by the British Geological Survey and its precursors dates back to 1913 in, for example, *Statistical Summary of the Mineral Industry*. In this issue we continue to feature special graphs and tables which we introduced in 1986.

The paucity of data available from some major trading countries gives rise to problems in the compilation of accurate figures for their trade in mineral materials. Where appropriate, therefore, a reconstruction of either their imports or exports is carried out by searching the official publications of their worldwide trading partners. In this way a high proportion of trade data in particular commodities can generally be traced without breaching confidentiality. This year's trade reconstruction is devoted to five centrally planned economies in Eastern Europe for which trade information is particularly difficult to acquire. As might be expected one of the difficulties in presenting a complete picture of trade in Eastern Europe is that comprehensive details of trade within COMECON are not available to us. The Appendix is printed on a coloured background to remind the reader that the figures are derived indirectly from a number of sources.

The tables of mine and refined metal production are basic indicators of the level of activity in the world mineral industry. Many show a perceptible recovery over the last three or four years, clearly evident from the corresponding production graphs.

This edition features twenty-three price-production graphs including, for the first time, graphs for molybdenum and vanadium. It is possible to fit a trend line to the latter showing that world vanadium production has been growing at the comparatively high rate of 7% per annum since 1950. In general it should be noted that the growth rates shown, with the exception of silver and coal, exceed the actual growth rates experienced towards the end of the period. It is becoming clear that the production growth rates achieved up to the end of the 'seventies' have been replaced by lower rates in the 'eighties'.

It may not be generally appreciated that this publication is compiled from a more comprehensive data set maintained by the staff of the Mineral Intelligence Programme of the British Geological Survey. Additional data, such as value of minerals produced, country breakdown of trade, and trade data for minor minerals are available on enquiry. Although data on consumption is not compiled the reader should be aware that, assuming stock changes can be discounted, it is possible to calculate the approximate apparent consumption of many commodities from the data in *World Mineral Statistics*.

In each new volume account is taken of revisions and information received after the publication of the previous issue, so that data for every year are as up-to-date as is practicable. The objective remains to present the latest official information from primary sources, that is, from the individual producing and trading countries, rather than to reproduce data from compilations made by other organisations working in the same field of world mineral statistics. However, such secondary sources have been fully consulted and the co-operation afforded to the British Geological Survey by numerous national and international organisations is gratefully acknowledged.

The mineral industry embodies the material end-product of much effort in the geological sciences. It is the hope of the compilers that the data contained in this volume will once again provide a factual basis for those who analyse and monitor this industry. Criticisms and suggestions that might help us to meet the changing needs of this specialisation would be welcomed.

EXPLANATORY NOTES

Coverage

World Mineral Statistics covers the majority of economically important, and internationally traded, mineral commodities; with few exceptions its range is the same as that in the *Statistical Summary of the Mineral Industry*, the predecessor of this series, which was discontinued in 1971. For each commodity constant efforts are made to ensure that as many producing and trading countries as possible are reported and that trade data cover all major traded forms. For some commodities, where statistics on production and trade are not publicly available, estimates are made. Users of this compilation are advised that more statistical information than can be included in a publication of this nature is in the Mineral Intelligence Programme files and is available for consultation.

Arrangement of countries

After the United Kingdom, if listed, countries are ordered alphabetically in geographical groupings as follows:

European Economic Community (EEC)
Europe other than EEC; including the Soviet Union
Africa
North and Central America, including the Caribbean
South America
Asia
Australasia, including the Pacific Islands

So far as possible the nomenclature follows the London Diplomatic List and United Nations usage.

Production

Metals Mine production of many metals is expressed in terms of metal content. This is clearly indicated at the head of the table, adjacent to the unit used. For aluminium, cobalt, copper, iron, lead, nickel, tin and zinc, mine production and metal production are shown in separate tables. Unless otherwise specified, metal production statistics relate to metal recovered from both domestic or imported materials, whether primary or secondary, but excludes remelted material.

Canada Production of Canadian minerals is shown throughout by the official figures for 'sales and shipments'.

Trade

Federal Republic of Germany Data include shipments to, and purchases from, the German Democratic Republic.

South Africa Import data are taken from the trade statistics of the common customs area, which includes Botswana, Lesotho, South Africa, Namibia and Swaziland, and relate to this area as a whole. Where separate data are available for any of these countries they have also been shown even though this may result in some double counting.

Export data are taken from returns furnished by producers to the Department of Mineral and Energy Affairs, and may be shipments rather than actual exports.

Estimates for other South African exports, based on reconstruction from importing countries, may include material originating in any of the countries of the common customs area and so involve some double counting on tables where these are listed separately.

USA US trade statistics show trade between the US customs territory and foreign countries, but exclude trade between the US and Puerto Rico, and between the US and Guam, American Samoa and other US possessions. Also excluded is trade between any of these outlying areas, shipments from US possessions to foreign countries, and shipments for the use of the US Government in foreign countries.

General Although every effort has been made to provide comprehensive coverage of trade statistics the resulting trade compilations depend on the nature of the data available. The

fact that a country is not shown as trading in a particular commodity does not necessarily imply that there is no trade in that item. The commodity may not be separately identified in the available trade statistics or may not be traded in significant quantities.

Where an estimate for a trade statistic has been reconstructed from the imports/exports of other countries, the resulting figure may be conservative, as complete coverage of world trade is seldom available.

In general, export statistics include re-exports. The distinction is only made when re-exports are recorded separately in the relevant national trade account and are deemed to be significant.

Tables showing trade in metals covered by Standard International Trade Classification (Revision 2) 688.0, 689.1 & 9, and 699.9 (Antimony, Bismuth, Cadmium, Chromium, Cobalt, Manganese, Molybdenum, Tantalum–Niobium, Titanium, Tungsten, Vanadium and Zirconium) include under the term 'metal', unwrought and wrought forms, powder, alloys, waste and scrap, unless these are separately shown. Trade tables of other metals include only unwrought forms under the term 'metal'.

Commodity production – price graphs

These have been inserted adjacent to the relevant production tables. They are computer-generated plots of total annual world production against time. On the same horizontal time axis a specific price for the commodity has been plotted with reference to the right-hand vertical axis. Details of the price used are annotated below each plot. The production data have been taken from the current series of *World Mineral Statistics* and, pre-1970, from its predecessor, the *Statistical Summary of the Mineral Industry*. It should be noted that although mine production and commodity prices are shown on the same plot, any inference about the relationship between the two curves is a matter for the reader.

Most of the constant commodity prices are taken from *Commodity Trade and Price Trends*, published by the Johns Hopkins University Press for the World Bank, however use has also been made of other sources which are attributed on the relevant graphs. Permission to use these data is gratefully acknowledged.

The initial graphical analysis of the data was carried out using the MINITAB package. The plots were generated using in-house software modified by Graeme Atkinson of the NERC Computer Services and run on the NCS VAX 8600 computer at BGS, Keyworth.

Trade reconstruction: appendix

In the course of compilation of this publication it has been found necessary to reconstruct data for nations which do not publish trade statistics on all the mineral commodities covered. By extracting the information on imports or exports which is published by trading partners it is possible to reconstruct fairly comprehensive, though possibly conservative, trade data for most of these commodities. These reconstructions are maintained in the files of the Mineral Statistics section.

Acknowledgements

Compilation of this volume of mineral statistics has been possible only by obtaining information from a very large number of organisations throughout the world, chiefly home and overseas government departments and specialist national or international authorities concerned with particular sectors of the minerals or metals industries. To all these bodies the British Geological Survey expresses its grateful acknowledgement for the information made available, whether in published form or provided by direct correspondence.

Among the numerous overseas government agencies which have provided valuable information, particular acknowledgement is made to the United States Bureau of Mines; the Department

of Energy, Mines and Resources of Canada; the Bureau of Mineral Resources, Geology and Geophysics of Australia; the Department of Mineral and Energy Affairs of South Africa; the Indian Bureau of Mines; and the Mines Departments of other countries whose regular statements, yearbooks and other reports are worthy of direct consultation by readers in search of detail.

Specialist commodity organisations which have kindly allowed information to be reproduced include the British Sulphur Corporation, the International Lead and Zinc Study Group, the International Tin Council, the UK Iron and Steel Statistics Bureau, ISMA Ltd, the UN Food and Agriculture Organization, and the UNCTAD Committee on Tungsten. In a few instances, information on specific commodities has been obtained directly from company sources.

Supplementary information is also obtained from publications dealing with a wider range of commodities such as American Bureau of Metal Statistics, *Non-ferrous Metal Data*; Bureau de Documentation Minière, *Annales des Mines*; International Mining, *Yearbook*; Groupe IMETAL, *Annuaire Statistique Minemet*; Metallgesellschaft AG, *Metal Statistics*; Mining Journal, *Mining Annual Review*; Samim, *Metalli Non Ferrosi*; World Bureau of Metal Statistics, *World Metal Statistics*; and publications of the United Nations and its agencies.

Units

The statistics shown in this volume are expressed in metric units. The following factors are given for converting to non-metric units:

tonnes $\times 0.9842$ = long tons
tonnes $\times 1.1023$ = short tons
kilograms $\times 2.2046$ = pounds
kilograms $\times 32.1507$ = troy ounces
cubic metres $\times 35.3147$ = cubic feet
1 tonne of crude petroleum equals on average 7 barrels of crude petroleum.

1 metric ton unit = 10 kilograms
1 flask mercury = 34.5 kilograms

Conversion of national currencies to pounds sterling has been made using the annual period average factors shown for each country in *International Financial Statistics* published by the International Monetary Fund.

Notes:

- 1 Except where alumina hydrate is separately specified, national trade figures for alumina can be considered as inclusive of hydrate
 - 2 In this table the term 'unwrought' aluminium corresponds to item 684.1 of the Standard International Trade Classification (Revision 2) and comprises ingots, blocks, unwrought bars, etc
 - 3 Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys
- (a) Including alloys
 (b) Officially described as 'Aluminium ores and concentrates' but believed to be mostly alumina
 (c) Years ended 31 March following that stated
 (d) Years ended 30 June of that stated
 (e) Years ended 30 September of that stated
 (f) BGS estimates, based on known imports into certain countries
 (g) Imports into the Netherlands

Notes:

- 1 Except where alumina hydrate is separately specified, national trade figures for alumina can be considered as inclusive of hydrate
 - 2 In this table the term 'unwrought' aluminium corresponds to item 684.1 of the Standard International Trade Classification (Revision 2) and comprises ingots, blocks, unwrought bars, etc
 - 3 Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys
- (a) Including alloys
 (b) Figures may be incomplete as value only given in Israeli trade return for imports from some countries
 (c) Years ended 31 March following that stated
 (d) Years ended 30 June of that stated
 (e) Years ended 20 March following that stated
 (f) BGS estimates, based on known exports from certain countries

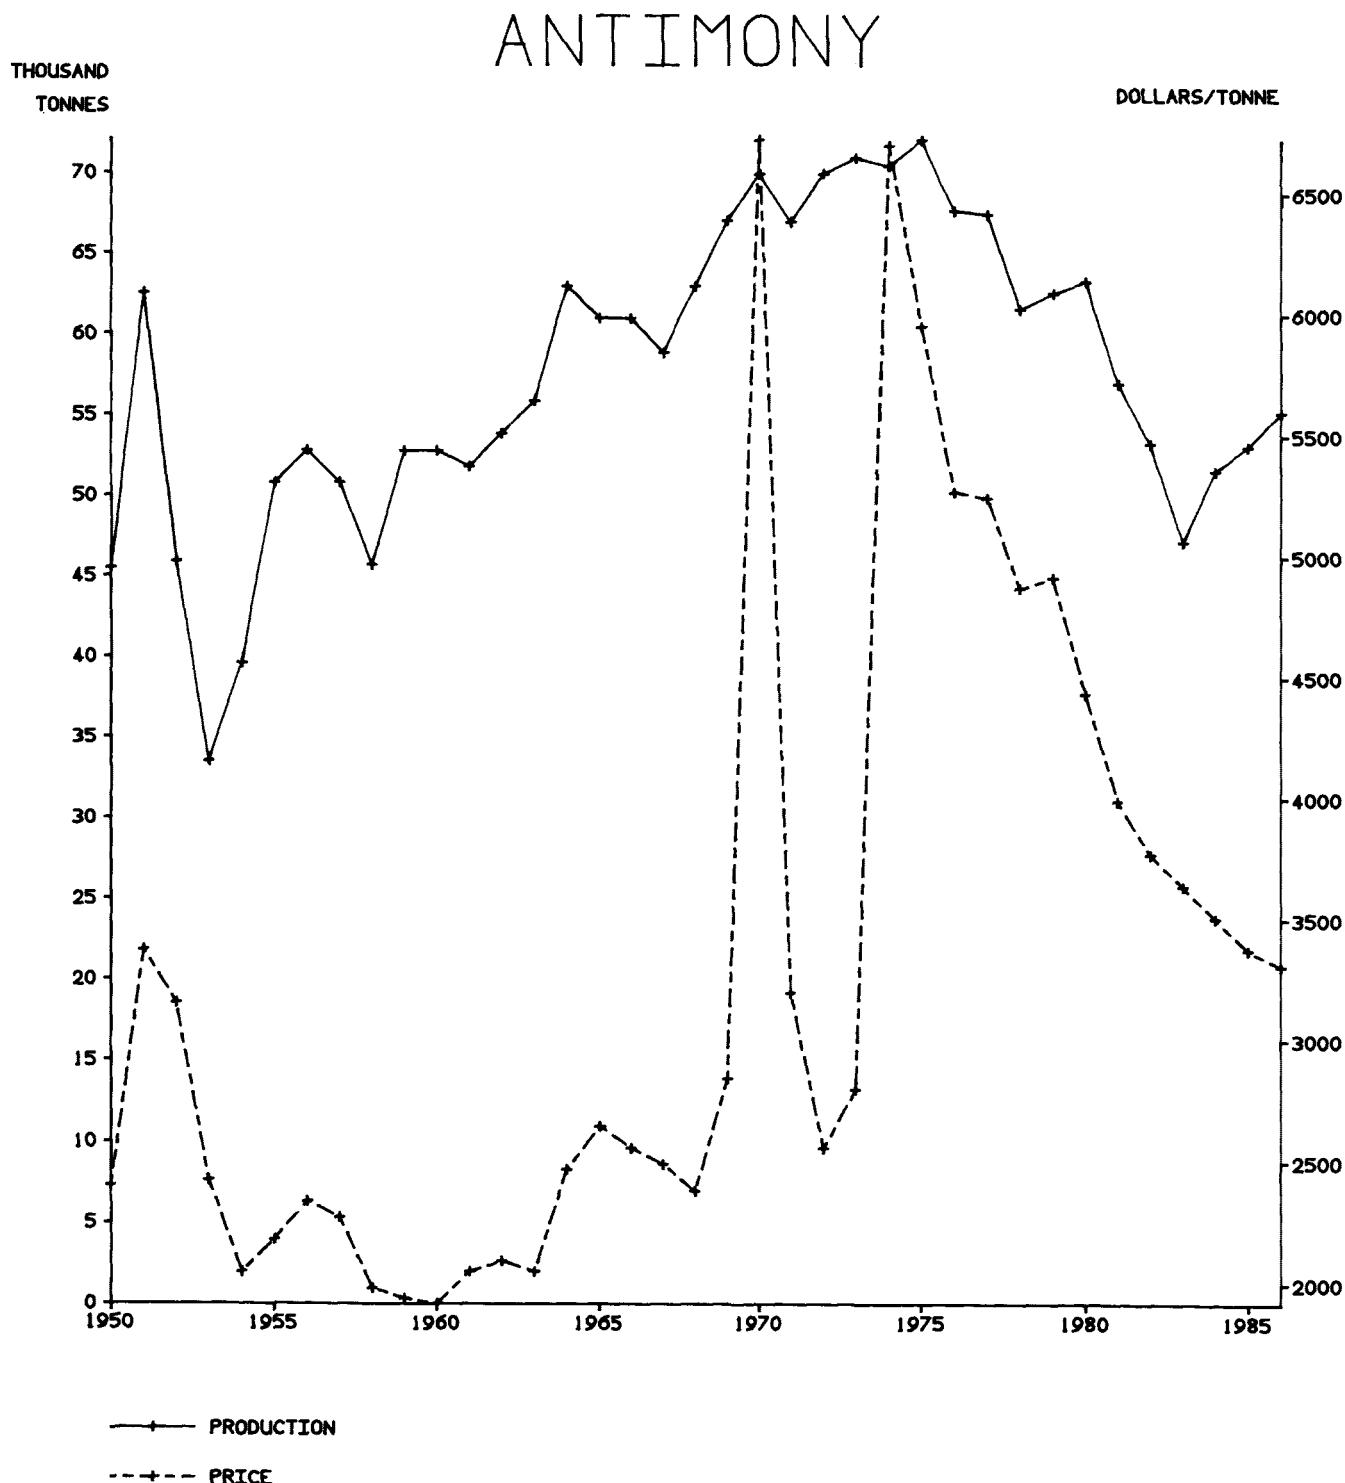

Figure 2 World mine production of antimony from 1950 to 1986 compared with the annual average New York price of RMM brand American antimony f.o.b. Laredo, post-1978 domestic refined, expressed in constant 1980 US dollars.

Constant commodity prices derived from Metal Statistics 1987 published by American Metal Market, using the CPI for the USA taken from International Financial Statistics Yearbook (1987).

Note: The price axis was incorrectly labelled as pounds stg in previous editions.

Notes:

- 1 Bentonites consist of montmorillonite (one of the smectite group of clay minerals) and occur in two main varieties, calcium bentonite, the most commonly occurring, and sodium bentonite, industrially the more important. Calcium bentonite can be converted to sodium bentonite by a sodium-exchange process. In some countries, such as the United Kingdom, calcium bentonite is known as fuller's earth, a term which is also used to refer to attapulgite, a mineralogically distinct clay mineral but exhibiting similar properties
- 2 In addition to the countries listed, Austria, Bulgaria, China, Soviet Union and Tanzania are also believed to produce bentonite and France, Iran and Japan may produce fuller's earth
 - (a) BGS estimates of saleable production based on data from producing companies
 - (b) Including attapulgite and sepiolite
 - (c) Sold or used by producers
 - (d) Years ended 31 March following that stated
 - (e) A low grade form of bentonite, known as metabentonite
 - (f) Mostly attapulgite
 - (g) Smectite

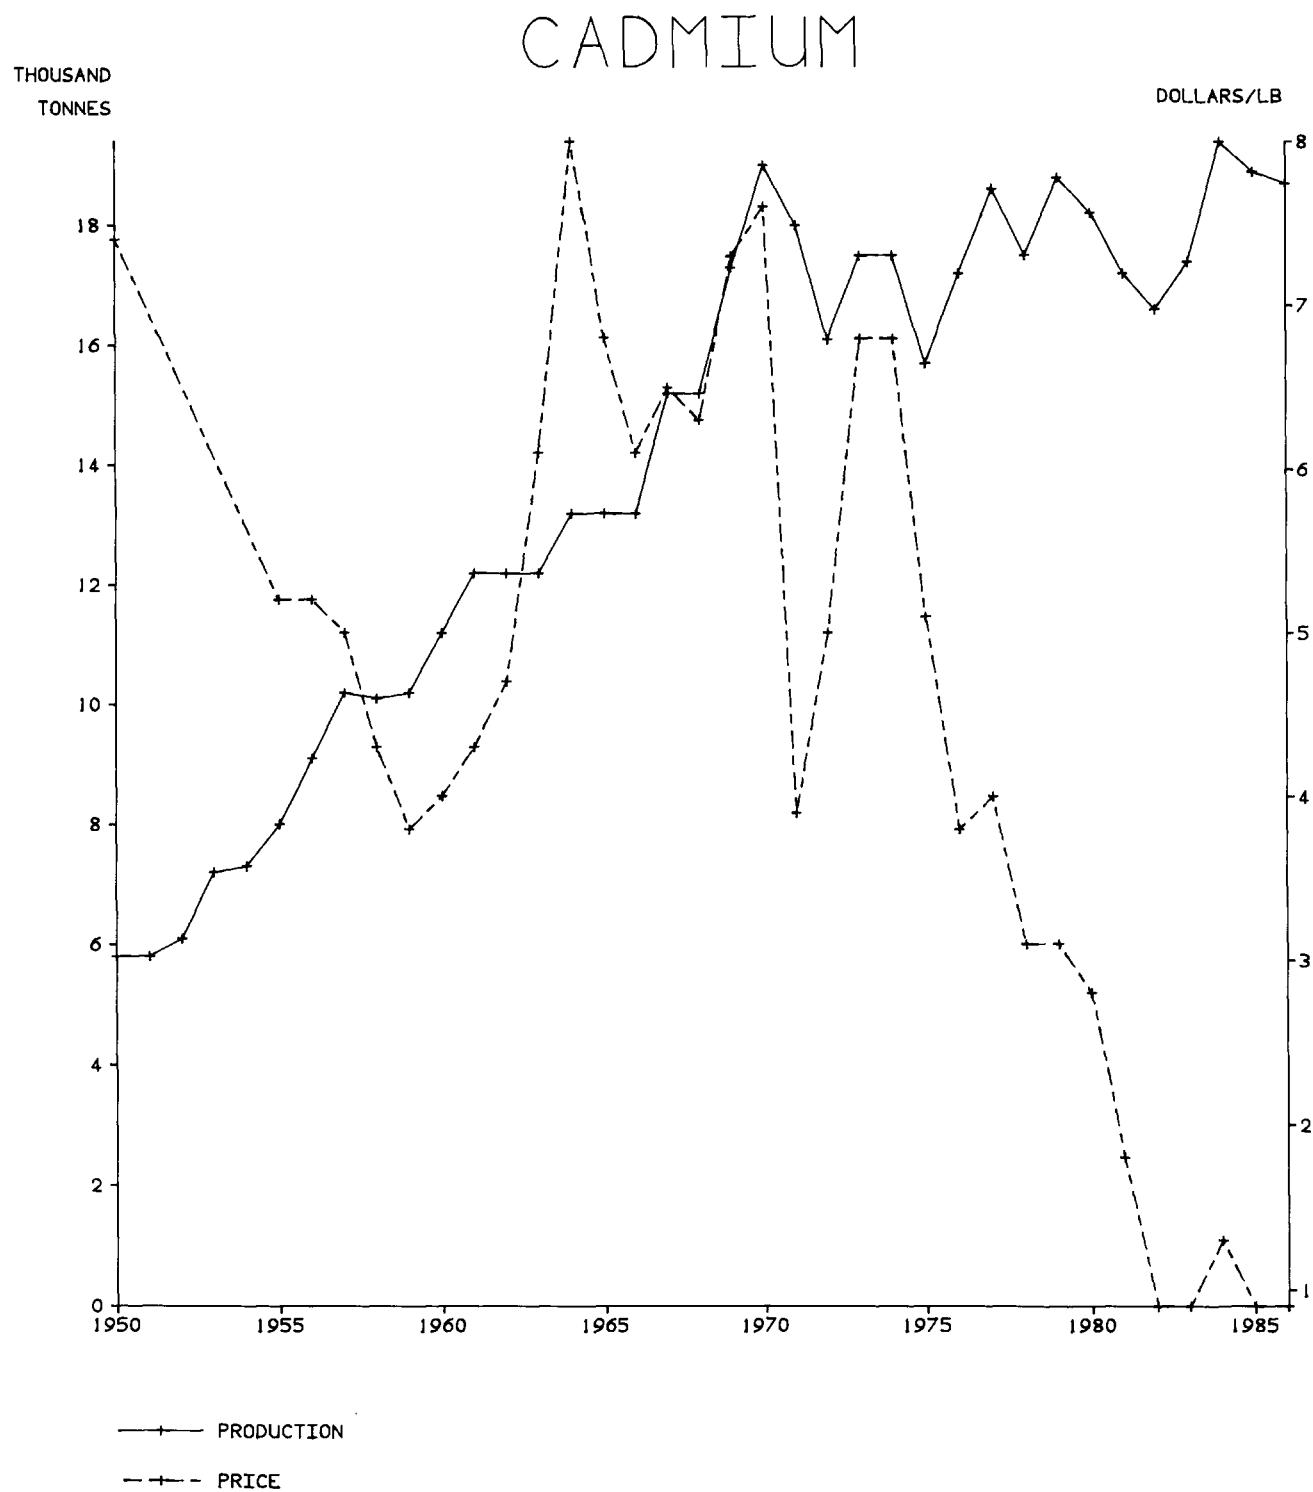

Figure 3 World production of cadmium from 1950 to 1986 compared with the annual average producer price expressed in constant 1980 US dollars.

Constant commodity prices have been derived from Metals Week, as quoted in Metallstatistik (published by Metallgesellschaft, 1987), using the CPI for the USA published in International Financial Statistics Yearbook (1987).

Note: Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys

(a) BGS estimates, based on known exports from certain countries

(b) Cr₂O₃ content

(c) Exports from Soviet Union

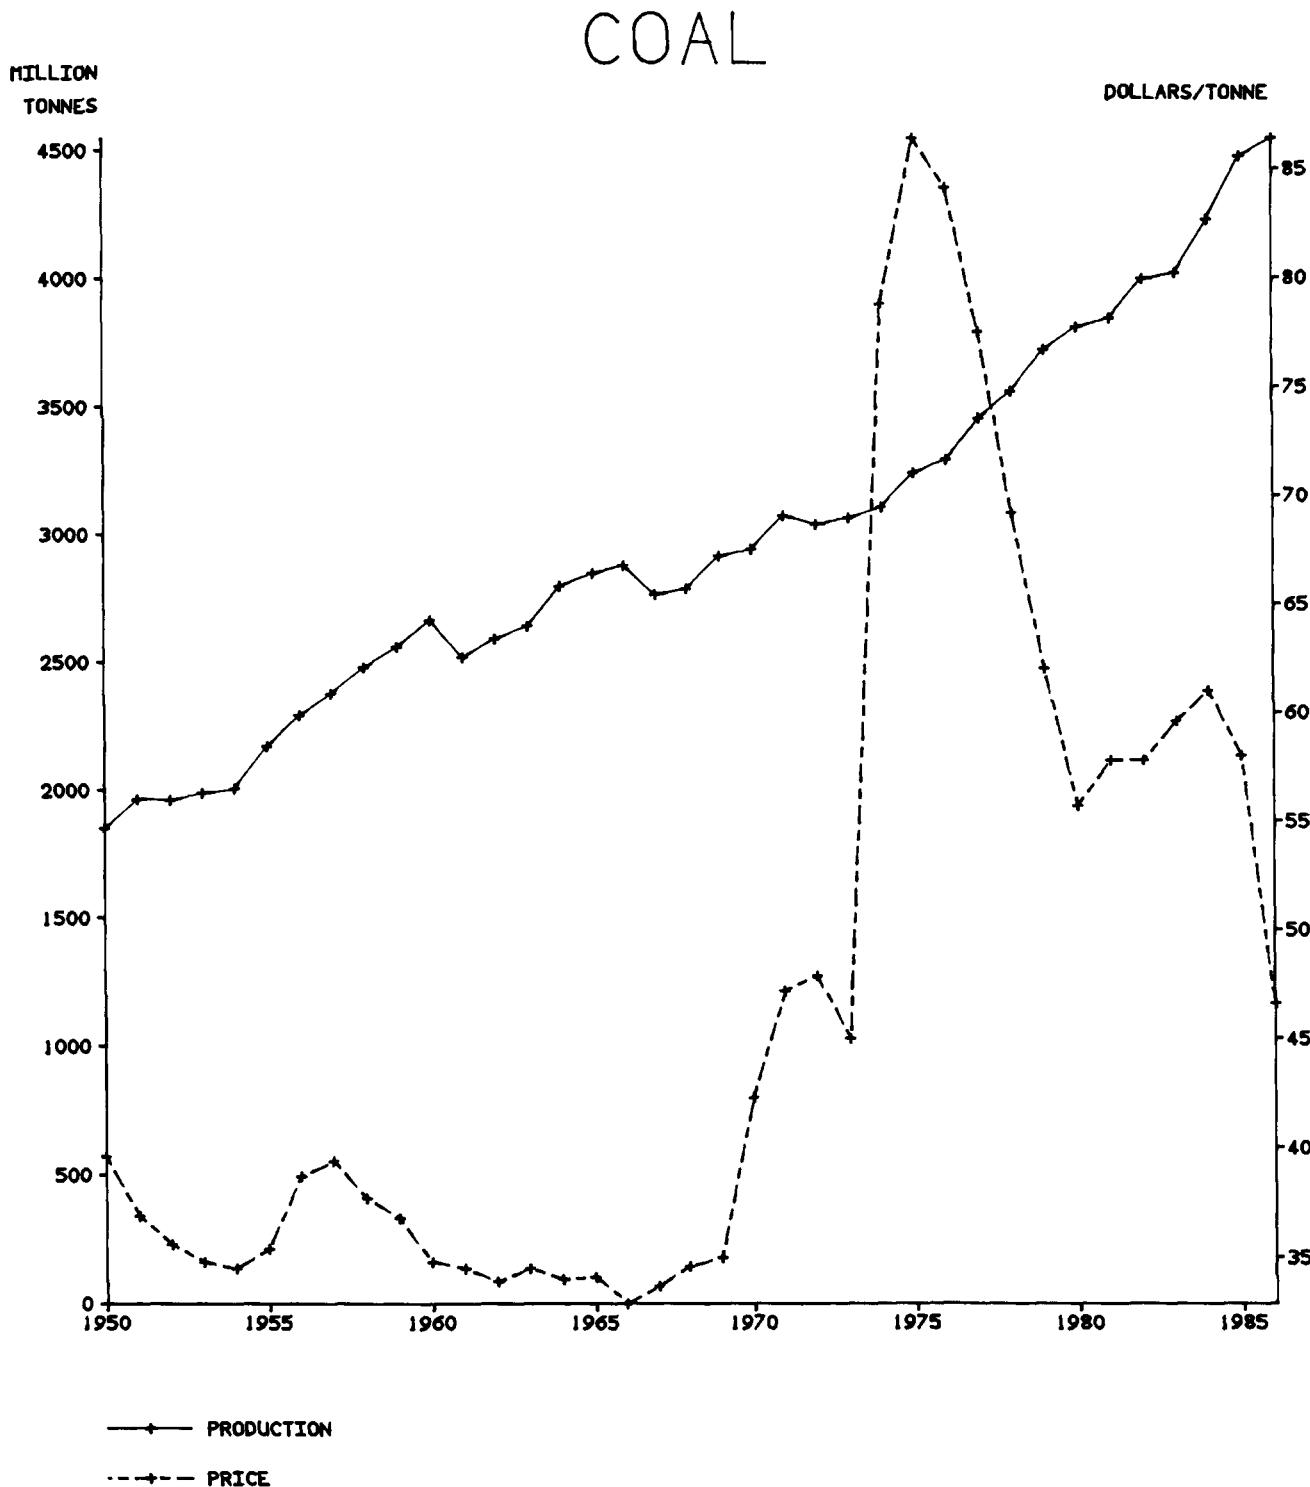

Figure 4 World production of coal from 1950 to 1986 compared with the yearly average export unit value of bituminous coal f.o.b. US ports expressed in constant 1980 US dollars.

Trend-line analysis of the production data indicates a growth rate of approximately 2% per annum over 37 years.

Constant commodity prices taken from Commodity Trade and Price Trends (1986) published by the Johns Hopkins University Press for the World Bank.

Note: There is no international agreement as to the separate definition of lignite and brown coal. In some cases they are distinguished. Elsewhere both may be aggregated under one or other term

- (a) Including lignite
- (b) Years ended 31 March following that stated
- (c) Years ended 20 March following that stated
- (d) Not including production from mines controlled by the Soviet Union
- (e) Includes beneficiated and directly shipped material

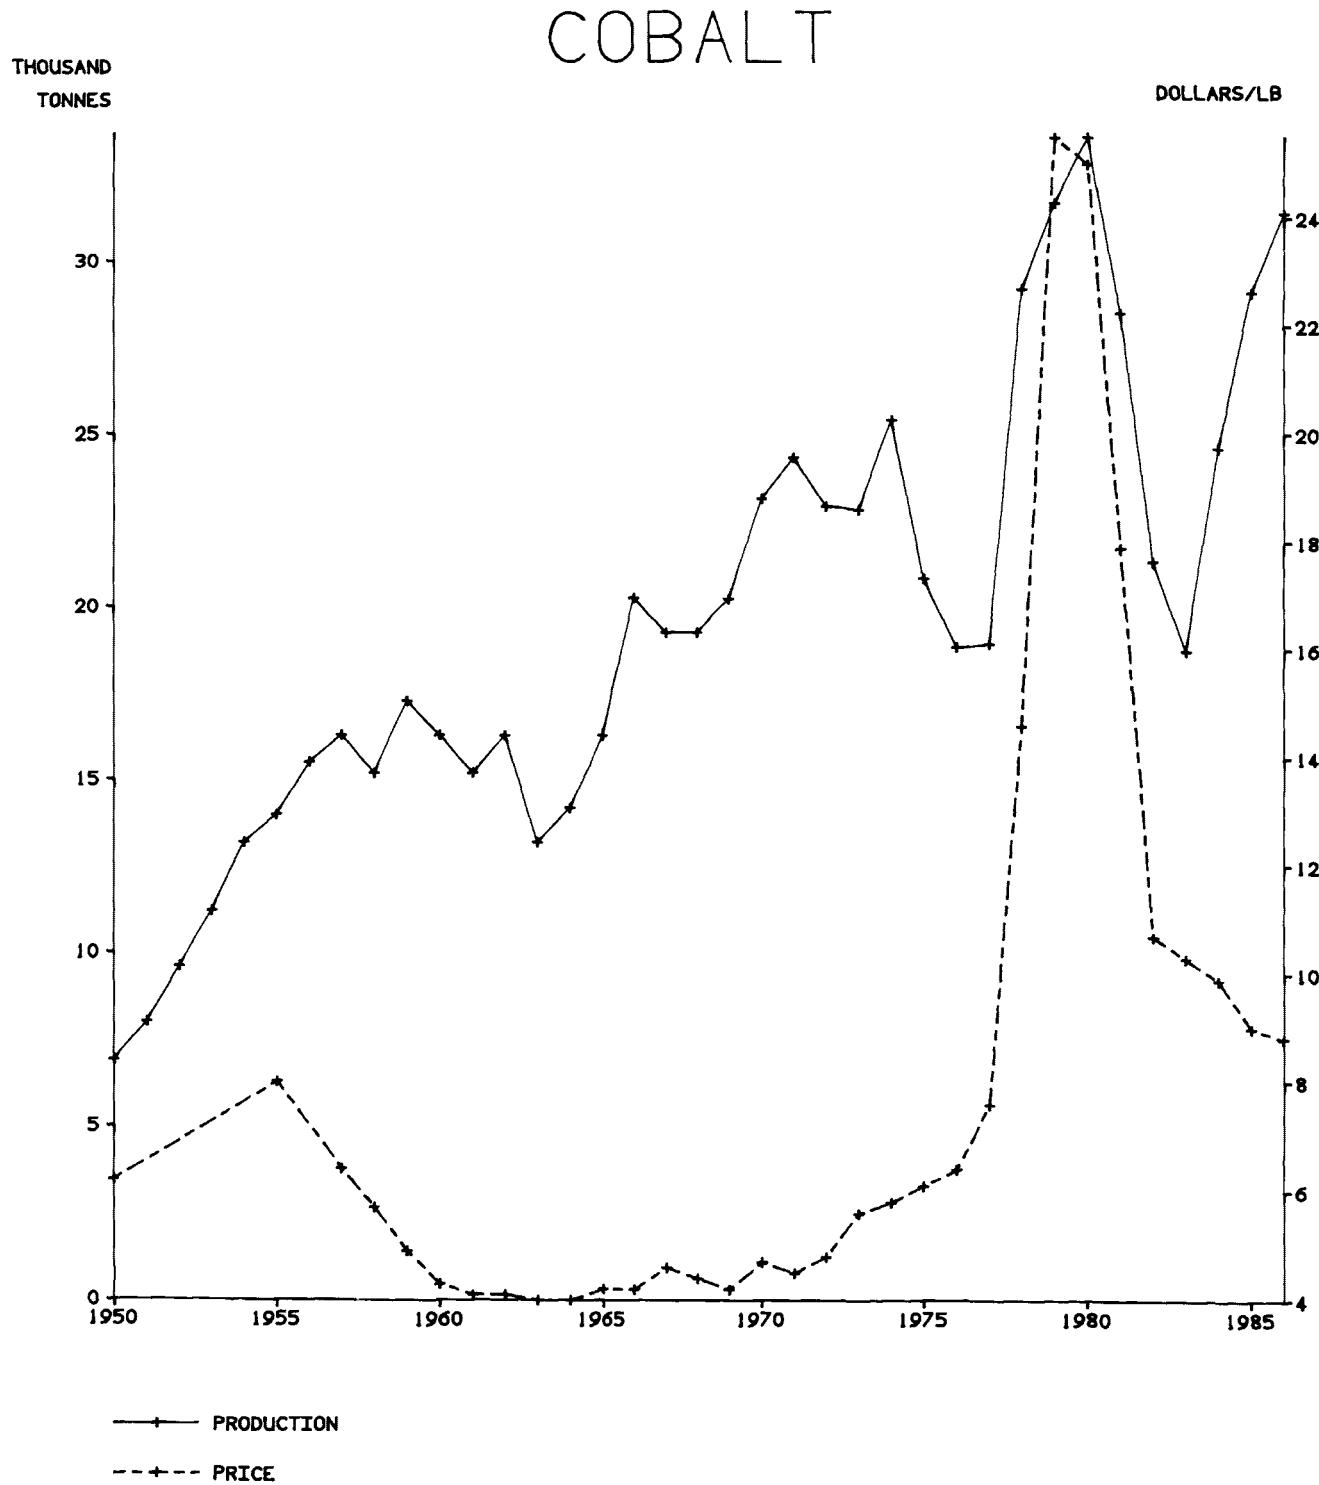

Figure 5 World mine production of cobalt from 1950 to 1986 compared with the annual average producer price expressed in constant 1980 US dollars.

Constant commodity prices to 1983 derived from AFRIMET INDUSSA price, using the CPI for the USA taken from International Financial Statistics Yearbook (1987).

Mine Production of Cobalt

tonnes (metal content)

Country	1982	1983	1984	1985	1986

Philippines	466	165	64	911	92
Australia	3 132	2 196	2 125	3 036	2 914
New Caledonia	1 803	1 385	1 750	2 171	1 923
World total	21 400	18 800	24 700	29 200	31 500

Note: There is frequently a considerable disparity between the cobalt content of ore raised and cobalt actually recovered. Figures in this table relate where possible to cobalt recovered. The principal exceptions to this are Australia and New Caledonia, the figures for which relate to cobalt in ore raised

Production of Cobalt Metal

tonnes

Country	1982	1983	1984	1985	1986
Belgium (a)
France	501	131	116	123	* 100
Germany, Federal Republic of	* 150	—	—	—	—
Czechoslovakia (b)

World total	19 300	17 400	23 500	27 300	29 800

Note: In addition to the production listed above, several countries, including the United Kingdom, France, Federal Republic of Germany and USA, are known to produce substantial amounts of cobalt compounds

(a) Production not reported. Much of the metal recorded under Zaire is believed to be further processed in Belgium

(b) Czechoslovakia is thought to recover cobalt from materials imported from Cuba. However no data are available to enable a reliable estimate to be made

(a) Blister copper plus recoverable copper in ores and matte exported

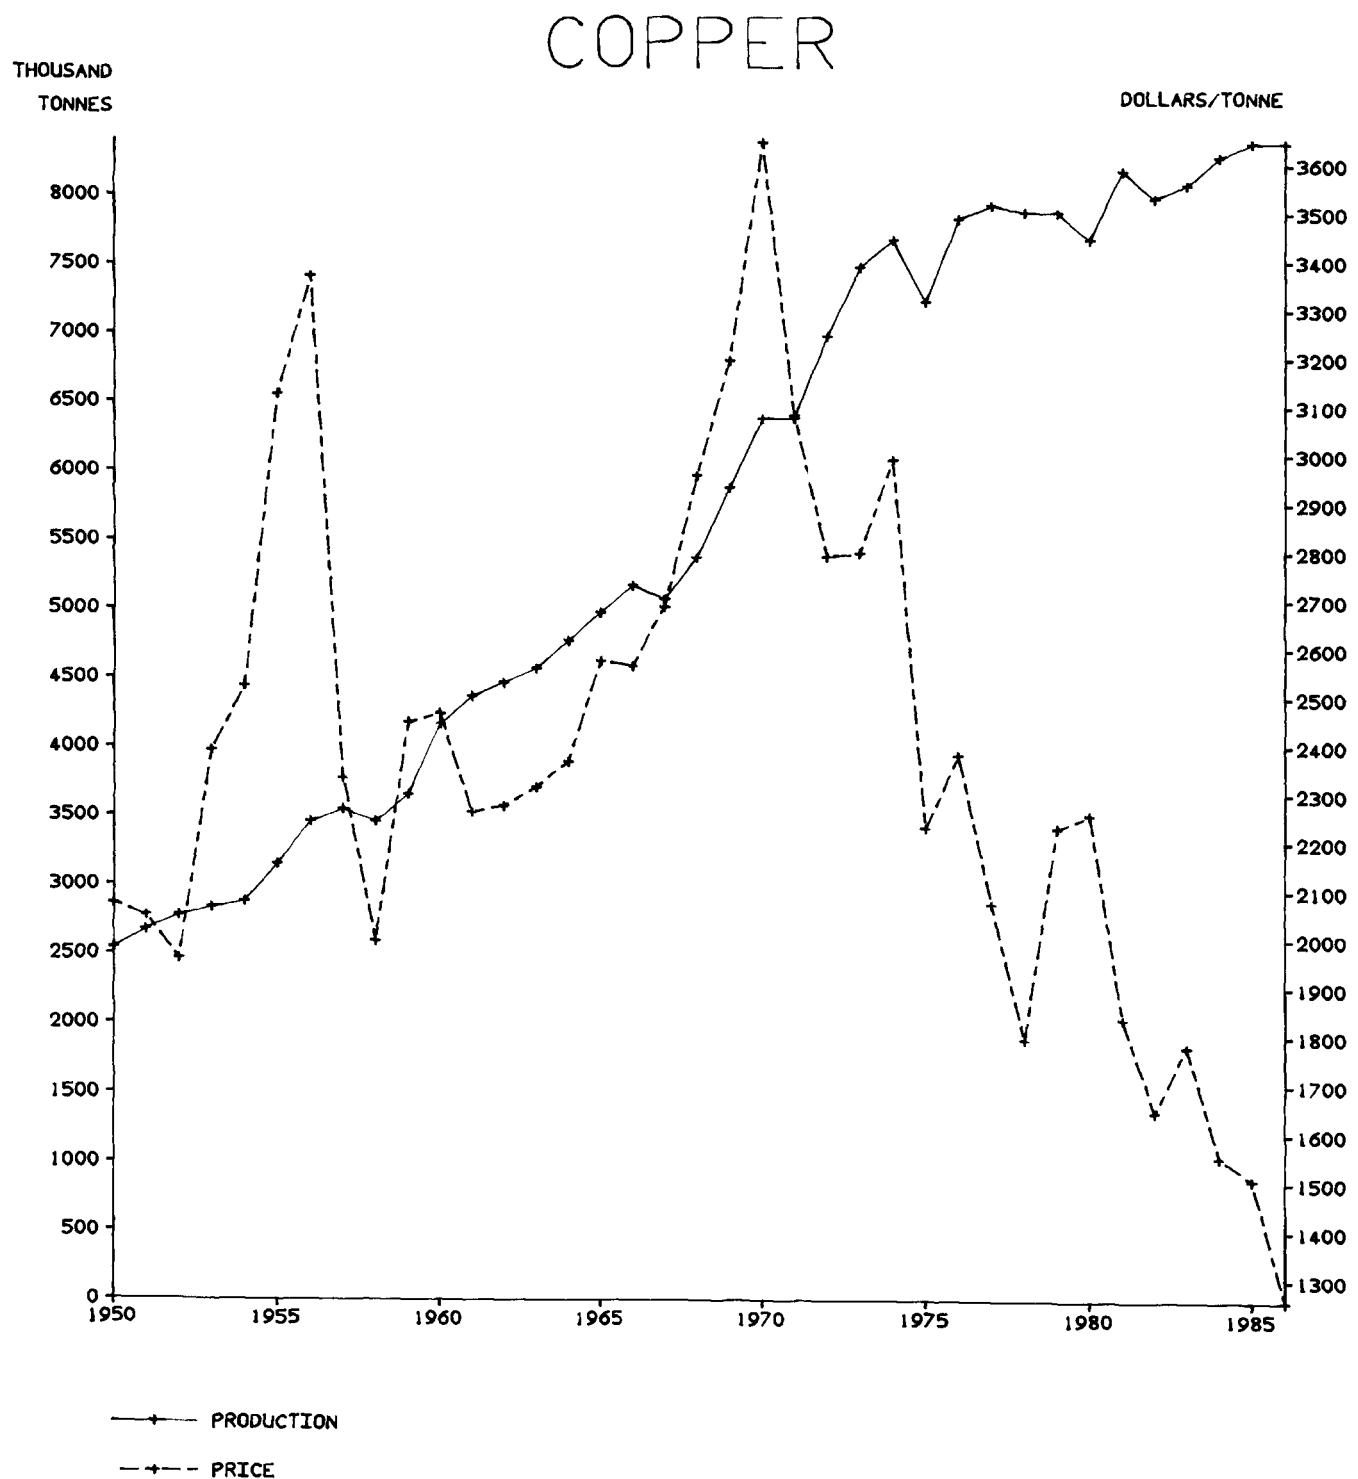

Figure 6 World mine production of copper from 1950 to 1986 compared with the yearly average producer price of domestic refinery electrolytic wirebars on the New York Market expressed in constant 1980 US dollars.

Constant commodity prices taken from Commodity Trade and Price Trends (1986) published by the Johns Hopkins University Press for the World Bank.

Note: In this table the term 'unwrought' copper corresponds to item 682.1 of the Standard International Trade Classification (Revision 2) and includes both unrefined (including blister) and refined copper. Additionally the term 'unwrought' as used here includes alloys unless these are separately specified.

The term 'scrap' includes scrap alloys

- (a) Imports into the Netherlands
- (b) Cu content
- (c) Years ended 20 March following that stated
- (d) Years ended 30 June of that stated
- (e) Including leach cathodes
- (f) BGS estimates, based on known imports into certain countries
- (g) Including matte
- (h) Figures may be incomplete as value only given in Israeli trade return for exports to some countries

Note: In this table the term 'unwrought' copper corresponds to item 682.1 of the Standard International Trade Classification (Revision 2) and includes both unrefined (including blister) and refined copper. Additionally the term 'unwrought' as used here includes alloys unless these are separately specified.

The term 'scrap' includes scrap alloys

- (a) BGS estimates, based on known exports from certain countries
- (b) Including matte and scrap
- (c) Including semi-manufactures
- (d) Cu content
- (e) Years ended 31 March following that stated
- (f) Years ended 20 March following that stated
- (g) Years ended 30 June of that stated

Note: In addition to the countries listed, Czechoslovakia, Hungary and Japan are also believed to produce diatomite

- (a) Sales
- (b) Including tripoli
- (c) Sold or used by producers
- (d) Moler is an impure diatomite containing a large proportion of clay
- (e) Excluding moler used for bricks, blocks etc.
- (f) Includes beneficiated and directly shipped material

Notes:

- 1 In several countries, for example Brazil, Colombia and Indonesia, a certain amount of gold produced in very small operations is not recorded in the official statistics used in compiling this table; in the case of Brazil this amount is thought to be substantial
- 2 In addition to the countries listed, Bulgaria, Burma, Czechoslovakia, German Democratic Republic, Norway, and Thailand are also believed to produce gold
 - (a) Exports
 - (b) Years ended 6 July of that stated
 - (c) Contained in blister copper, refinery muds and electrolytic copper
 - (d) Metal production
 - (e) Central Bank purchases

Notes:

- 1 This table includes all forms of amorphous and crystalline graphite but excludes synthetic material
 2 In addition to the countries listed, Canada, Egypt and Namibia are also believed to produce graphite

- (a) Crude
 (b) Including production from imported crude graphite
 (c) Years ended 31 March following that stated
 (d) Includes beneficiated and directly shipped material

Note: In addition to the countries listed, Cuba and Vietnam are also believed to produce iron ore

(a) Includes beneficiated and direct shipping ore

(b) Nickeliferous iron ore

(c) Including by-product magnetite

(d) Including iron sand

(e) Years ended 20 March following that stated

(f) Including manganiferous iron ore

(g) Including shipments of by-product iron ore

Note: In this table the term 'ingots, blooms, billets' corresponds to items 672.4 and 5 of the Standard International Trade Classification (Revision 2) which includes those of alloy and high carbon steel

- (a) Excluding ships intended for breaking up
- (b) Included with 'ferro-silico-spiegeleisen & silico-manganese'
- (c) Included with 'other ferro-alloys'
- (d) Years ended 31 March following that stated
- (e) Years ended 30 June of that stated
- (f) BGS estimates, based on known imports into certain countries

Note: In this table the term 'ingots, blooms, billets' corresponds to items 672.4 and 5 of the Standard International Trade Classification (Revision 2) which includes those of alloy and high carbon steel

- (a) Excluding ships intended for breaking up
- (b) Figures may be incomplete as value only given in Israeli trade return for imports from some countries
- (c) Including powder
- (d) Included with 'other ferro-alloys'
- (e) Years ended 31 March following that stated
- (f) Years ended 20 March following that stated
- (g) BGS estimates, based on known exports from certain countries
- (h) Years ended 30 June of that stated
- (i) Years ended 30 September of that stated
- (j) Exports from the Soviet Union

Production of Kaolin

Country	1982	1983	1984	1985	1986
Australia (c)(f)	152 133	115 526	218 885	165 827	185 617
New Zealand	23 957	23 917	25 098	24 471	28 464
World total	17 300 000	18 300 000	19 900 000	20 400 000	21 600 000

Note: In addition to the countries listed, Lebanon and Vietnam are also believed to produce kaolin

- (a) Sales
- (b) Includes beneficiated and directly shipped material
- (c) Including beneficiated material .
- (d) Years ended 30 June of that stated
- (e) Sold or used by producers
- (f) White clays; including kaolin and ball clay
- (g) Washed and dried
- (h) Beneficiated
- (i) By-product, total production not reported

Note: In this table the term 'unwrought' lead corresponds to item 685.1 of the Standard International Trade Classification (Revision 2) and comprises base bullion, pigs, unwrought bars, etc

(a) Including alloys

(b) Pb content

(c) Years ended 20 March following that stated

(d) Years ended 31 March following that stated

(e) Complex lead-zinc ore

(f) BGS estimates, based on known imports into certain countries

Notes:

- 1 So far as possible sea water magnesia has been excluded from this table if specifically identified in trade accounts. Countries known to produce sea water magnesia and which do not specifically identify it in their trade accounts are Irish Republic, Israel and Norway
- 2 The term 'calcined', as used here, includes dead-burned, sintered and caustic-burned (caustic calcined) material

Notes:

1 Estimated average manganese content is given in parentheses for each country,

relating where possible to the later years

2 In addition to the countries listed, Colombia, Cuba and Vietnam are also believed to produce manganese ore

(a) Shipments of manganiferous iron ore only

(b) Includes beneficiated and direct shipping ore

(c) Includes ore grading 54% to less than 35% Mn

(d) Manganiferous iron ore

(e) Mn content of domestic iron ore

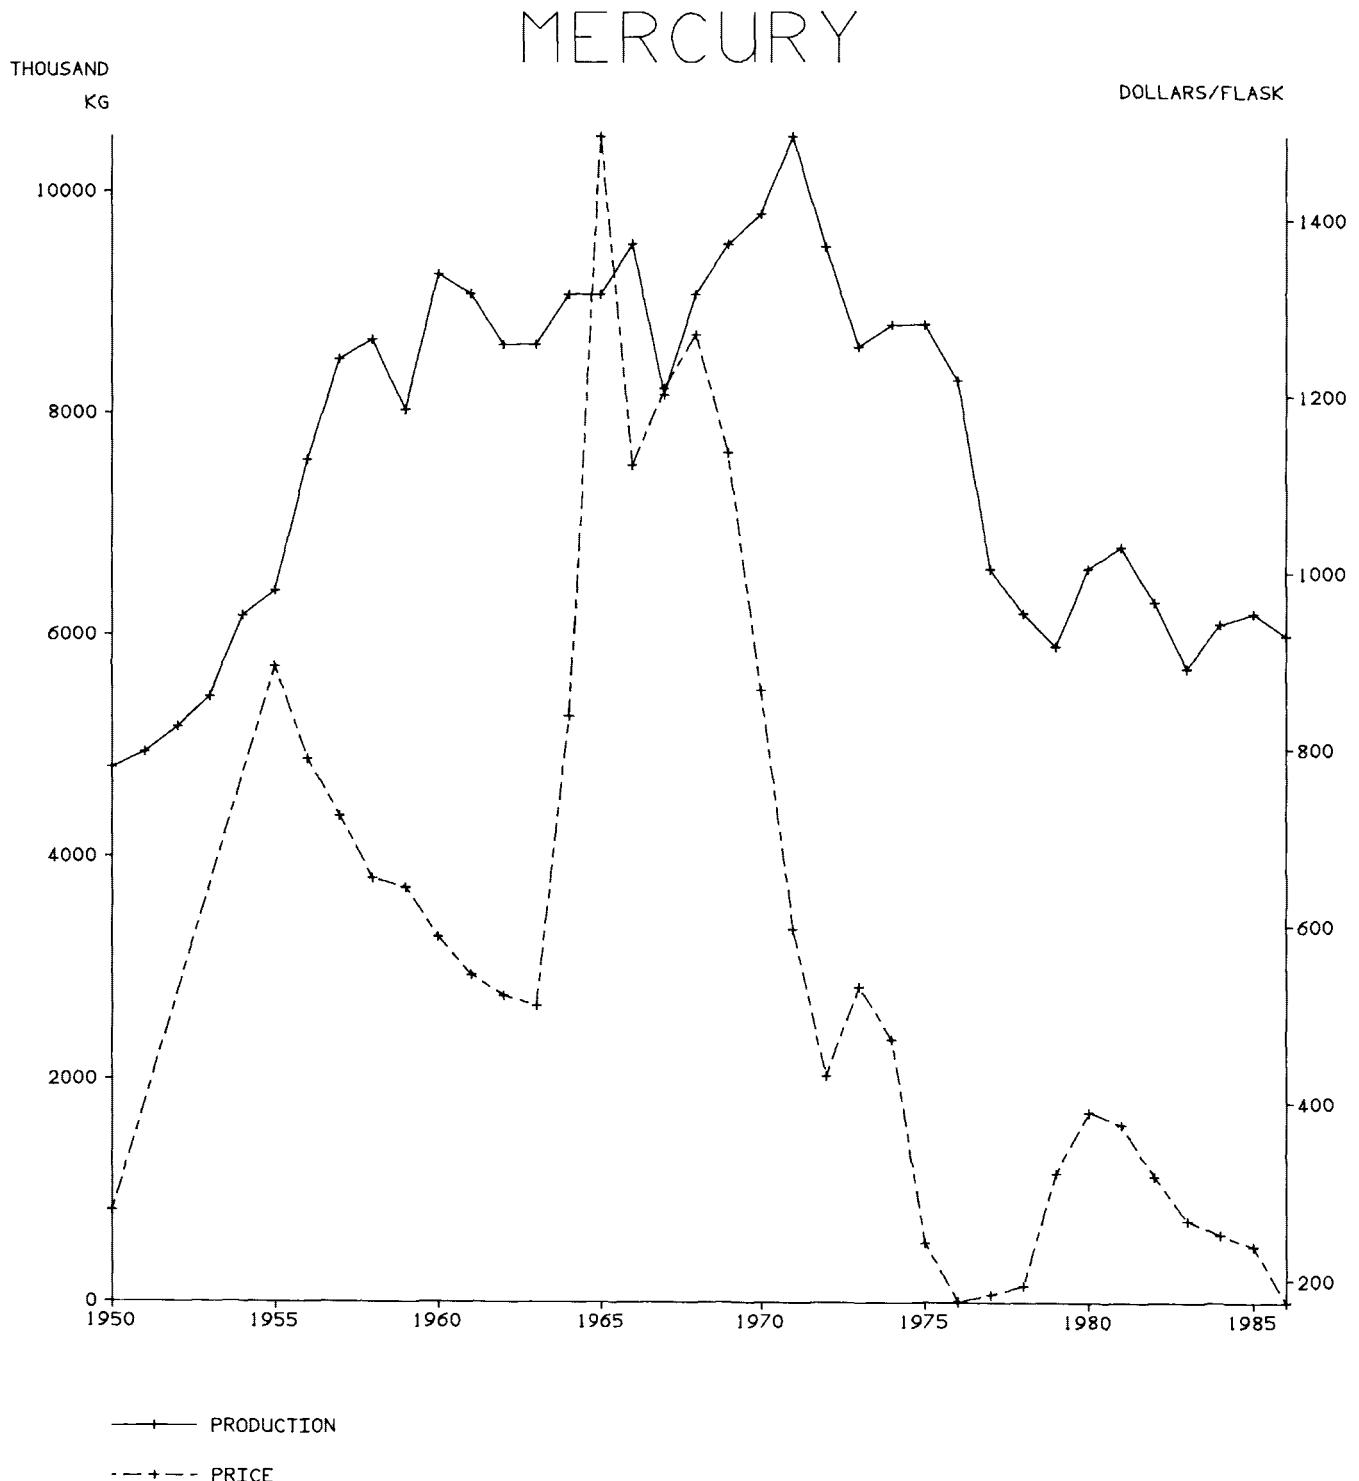

Figure 12 World production of mercury from 1950 to 1986 compared with the annual average price (USA) expressed in constant 1980 US dollars.

Constant commodity prices have been derived from Metals Week, as quoted in Metallstatistik (published by Metallgesellschaft, 1987), using the CPI for the USA published in International Financial Statistics Yearbook (1987).

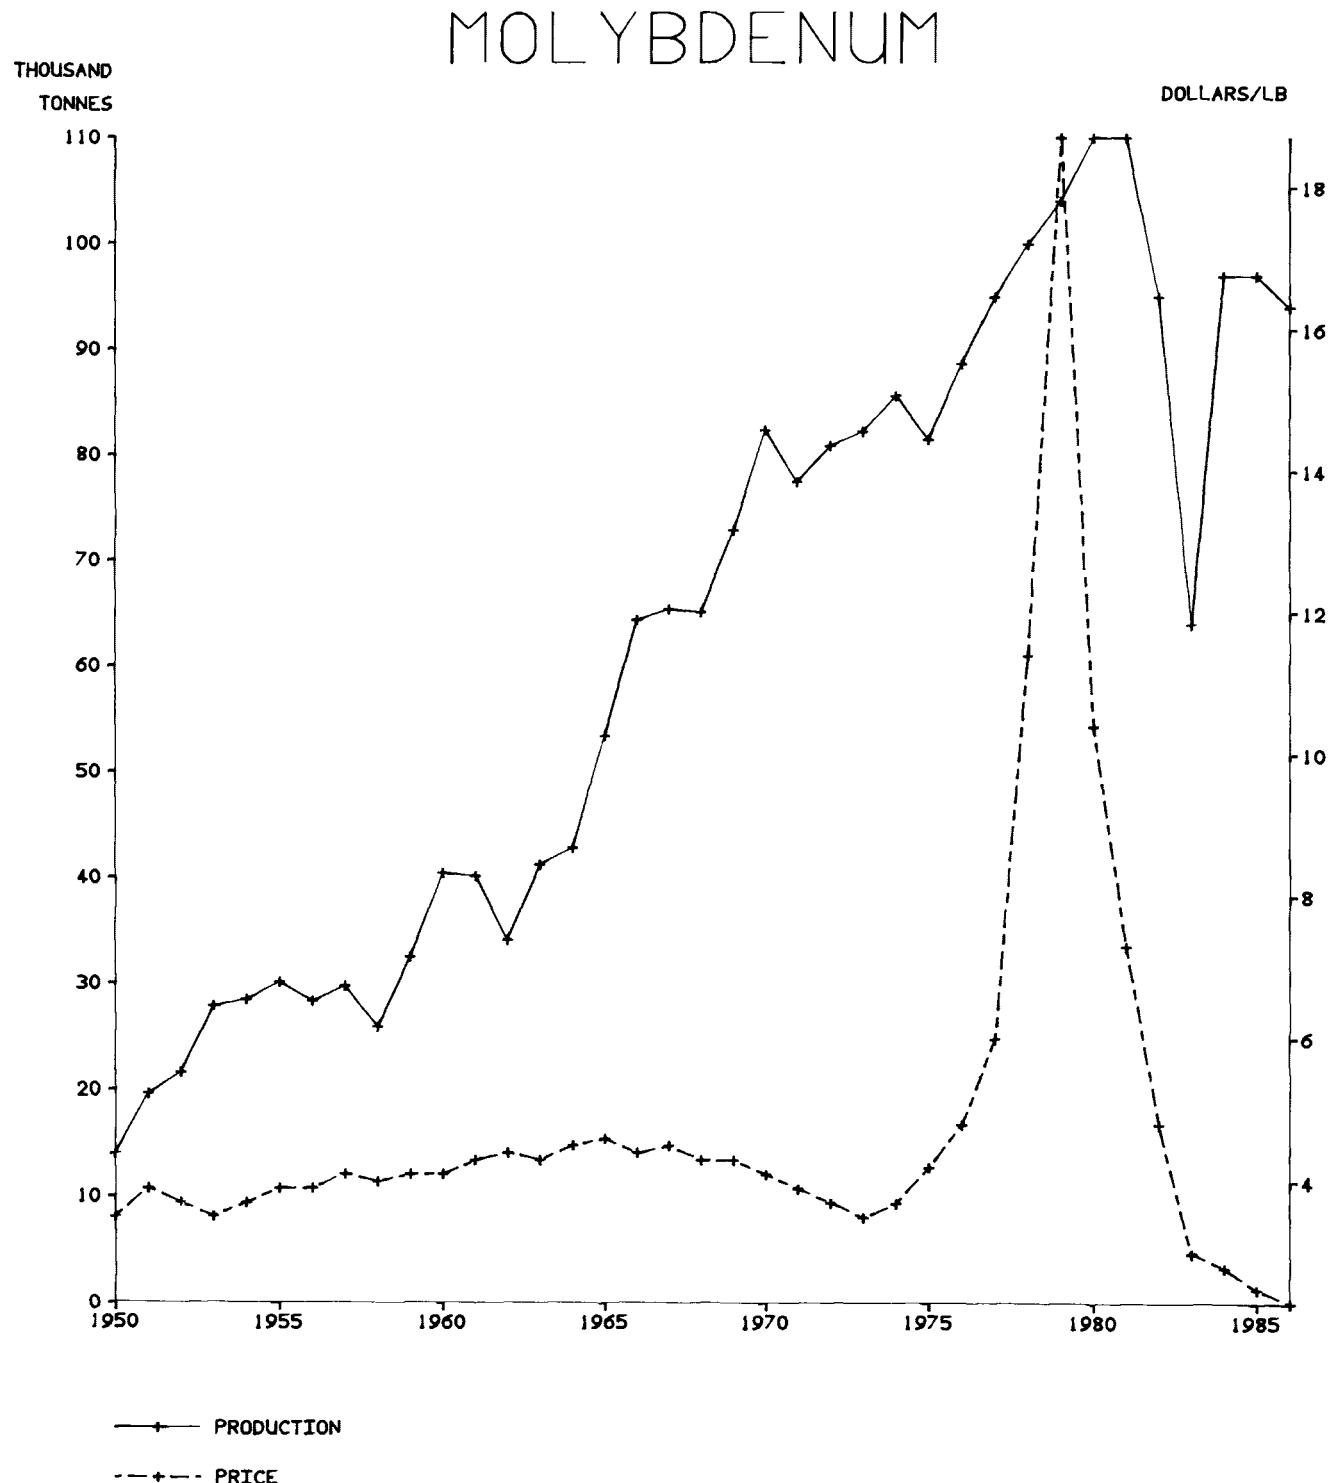

Figure 13 World mine production of molybdenum from 1950 to 1986 compared with the annual price of molybdenum in oxide expressed in constant 1980 US dollars.

Constant commodity prices derived from INTERMET Molybdenum data-base (1987) using the CPI for the USA taken from International Financial Statistics Yearbook (1987).

Note: Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys

(a) May include other ores

(b) BGS estimates, based on known exports from certain countries

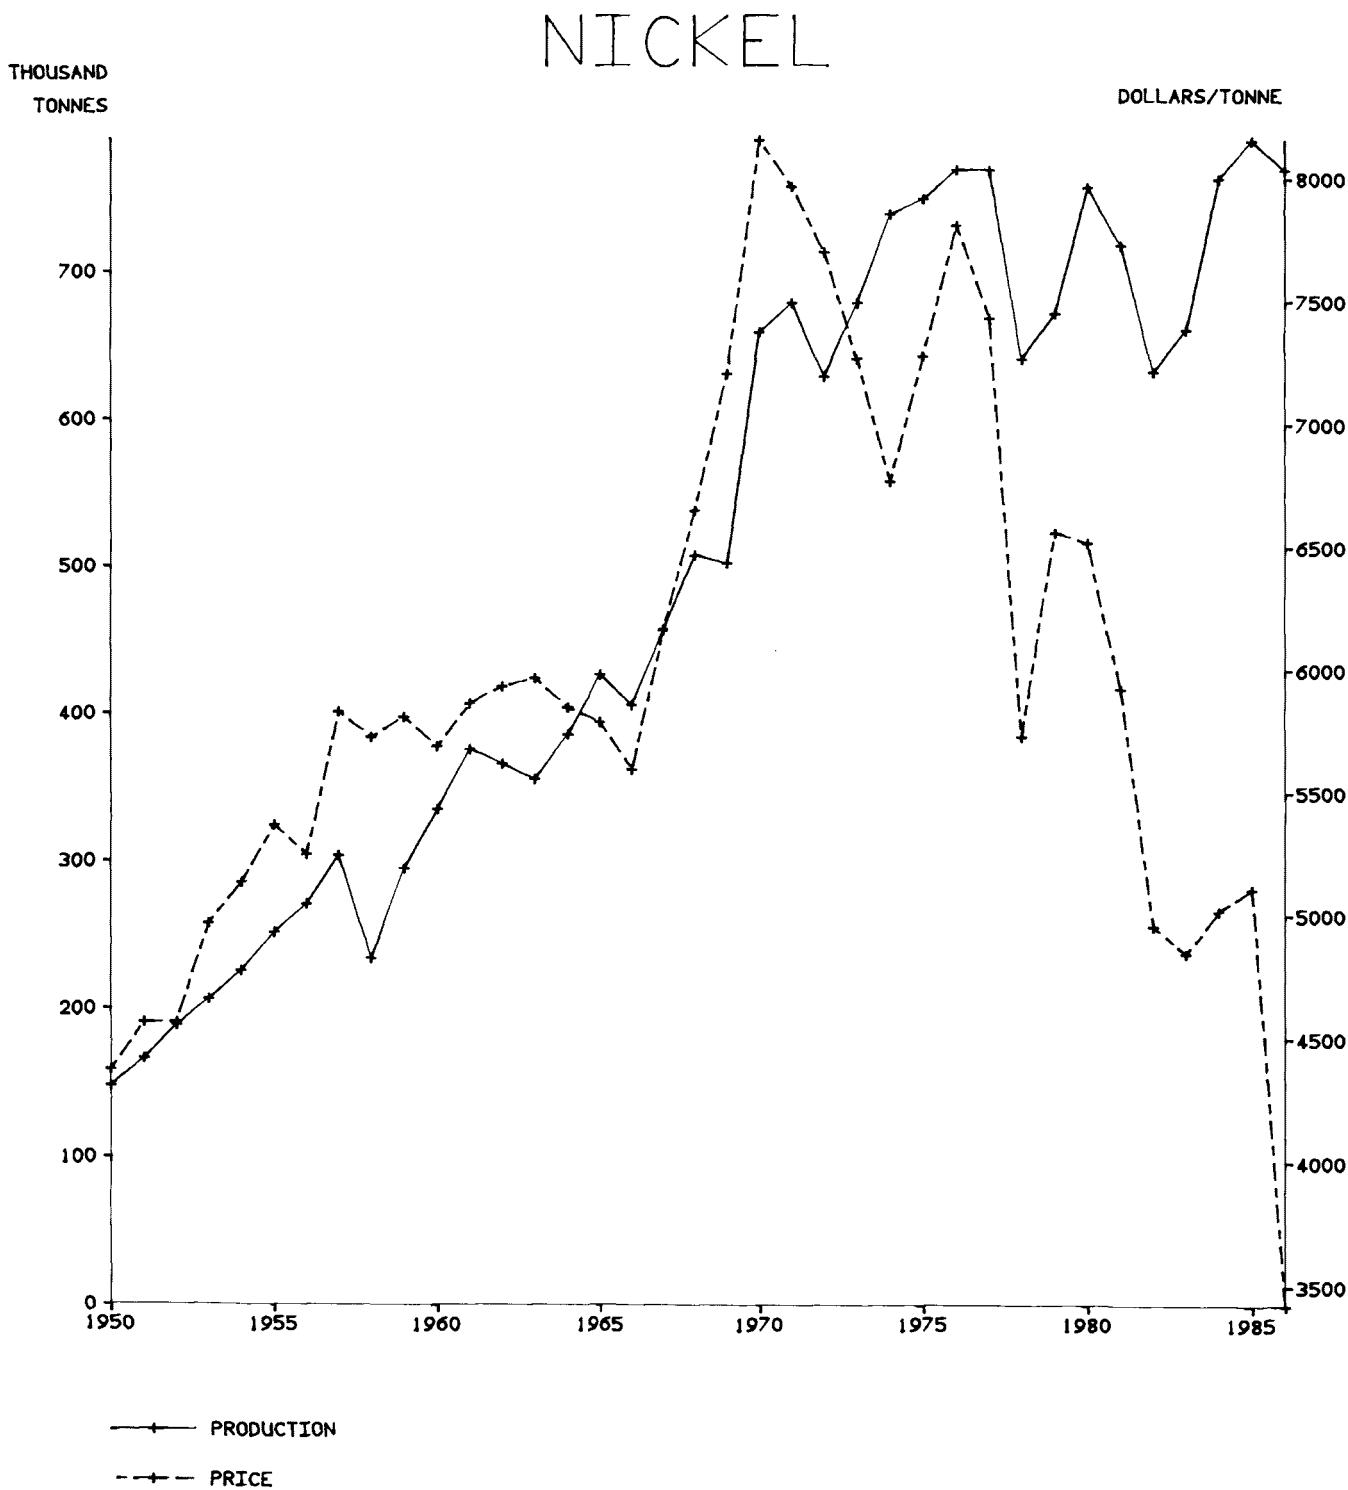

Figure 14 World mine production of nickel from 1950 to 1986 compared with the yearly average f.o.b. contract price of Canadian electrolytic cathodes expressed in constant 1980 US dollars (from 1980, LME cathodes).

Trend-line analysis of the production data from 1950 to 1976 indicates a growth rate of approximately 6% per annum.

Constant commodity prices taken from Commodity Trade and Price Trends (1986) published by the Johns Hopkins University Press for the World Bank.

Notes:

- 1 In this table the term 'unwrought' nickel corresponds to item 683.1 of the Standard International Trade Classification (Revision 2) which excludes all electro-plating anodes
 - 2 Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys
- (a) Including alloys
 (b) BGS estimates, based on known imports into certain countries
 (c) Ni content
 (d) BGS estimates; unwrought metal and Ni content of ores, concentrates, matte etc., based on known imports into certain countries
 (e) Ni-Co content (mainly nickel)

Scrap	22	14	44	129	211
New Zealand (d)					
Unwrought (a)	142	10	105	131	65

Notes:

- 1 In this table the term 'unwrought' nickel corresponds to item 683.1 of the Standard International Trade Classification (Revision 2) which excludes all electro-plating anodes
 2 Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys

- (a) Including alloys
 (b) Ni content
 (c) Years ended 31 March following that stated
 (d) Years ended 30 June of that stated
 (e) BGS estimates, based on known exports from certain countries

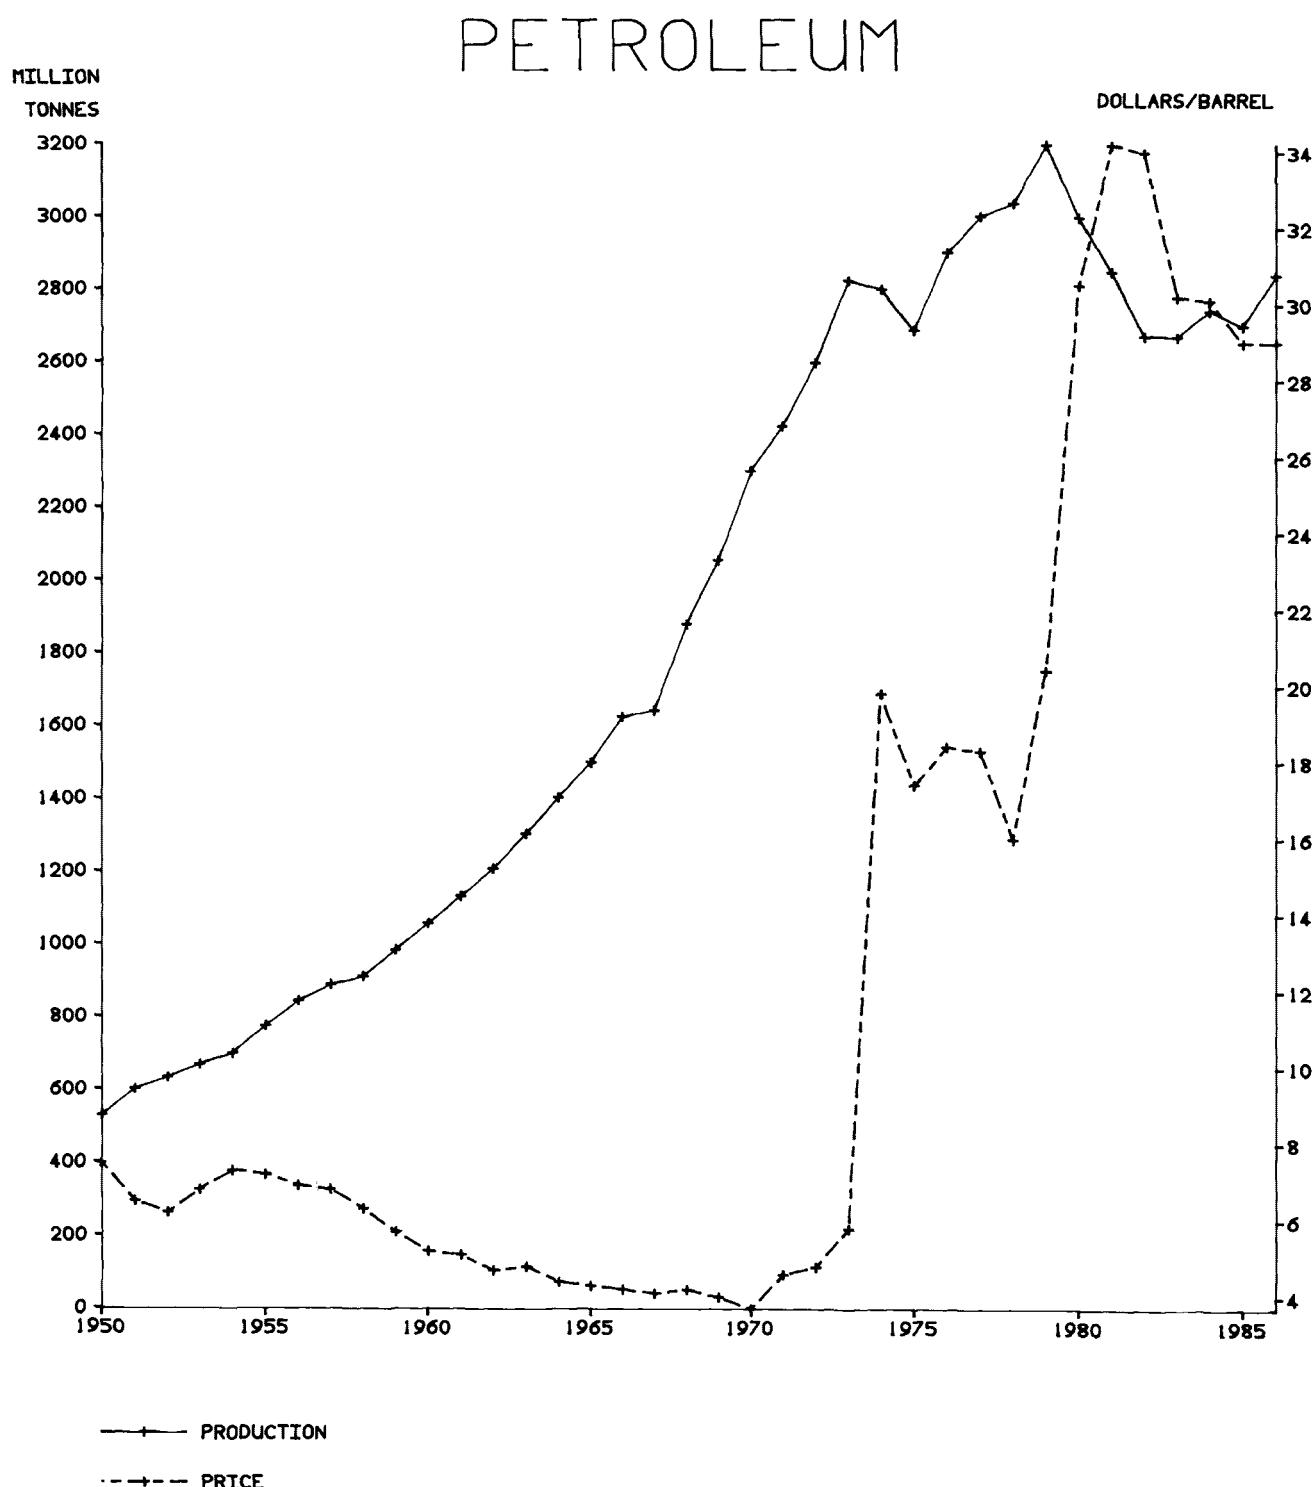

Figure 15 World production of crude petroleum from 1950 to 1986 compared with the weighted yearly average price f.o.b. OPEC countries of light crude expressed in constant 1980 US dollars (prior to 1974, f.o.b. Ras Tanura).

Constant commodity prices taken from Commodity Trade and Price Trends (1986) published by the Johns Hopkins University Press for the World Bank.

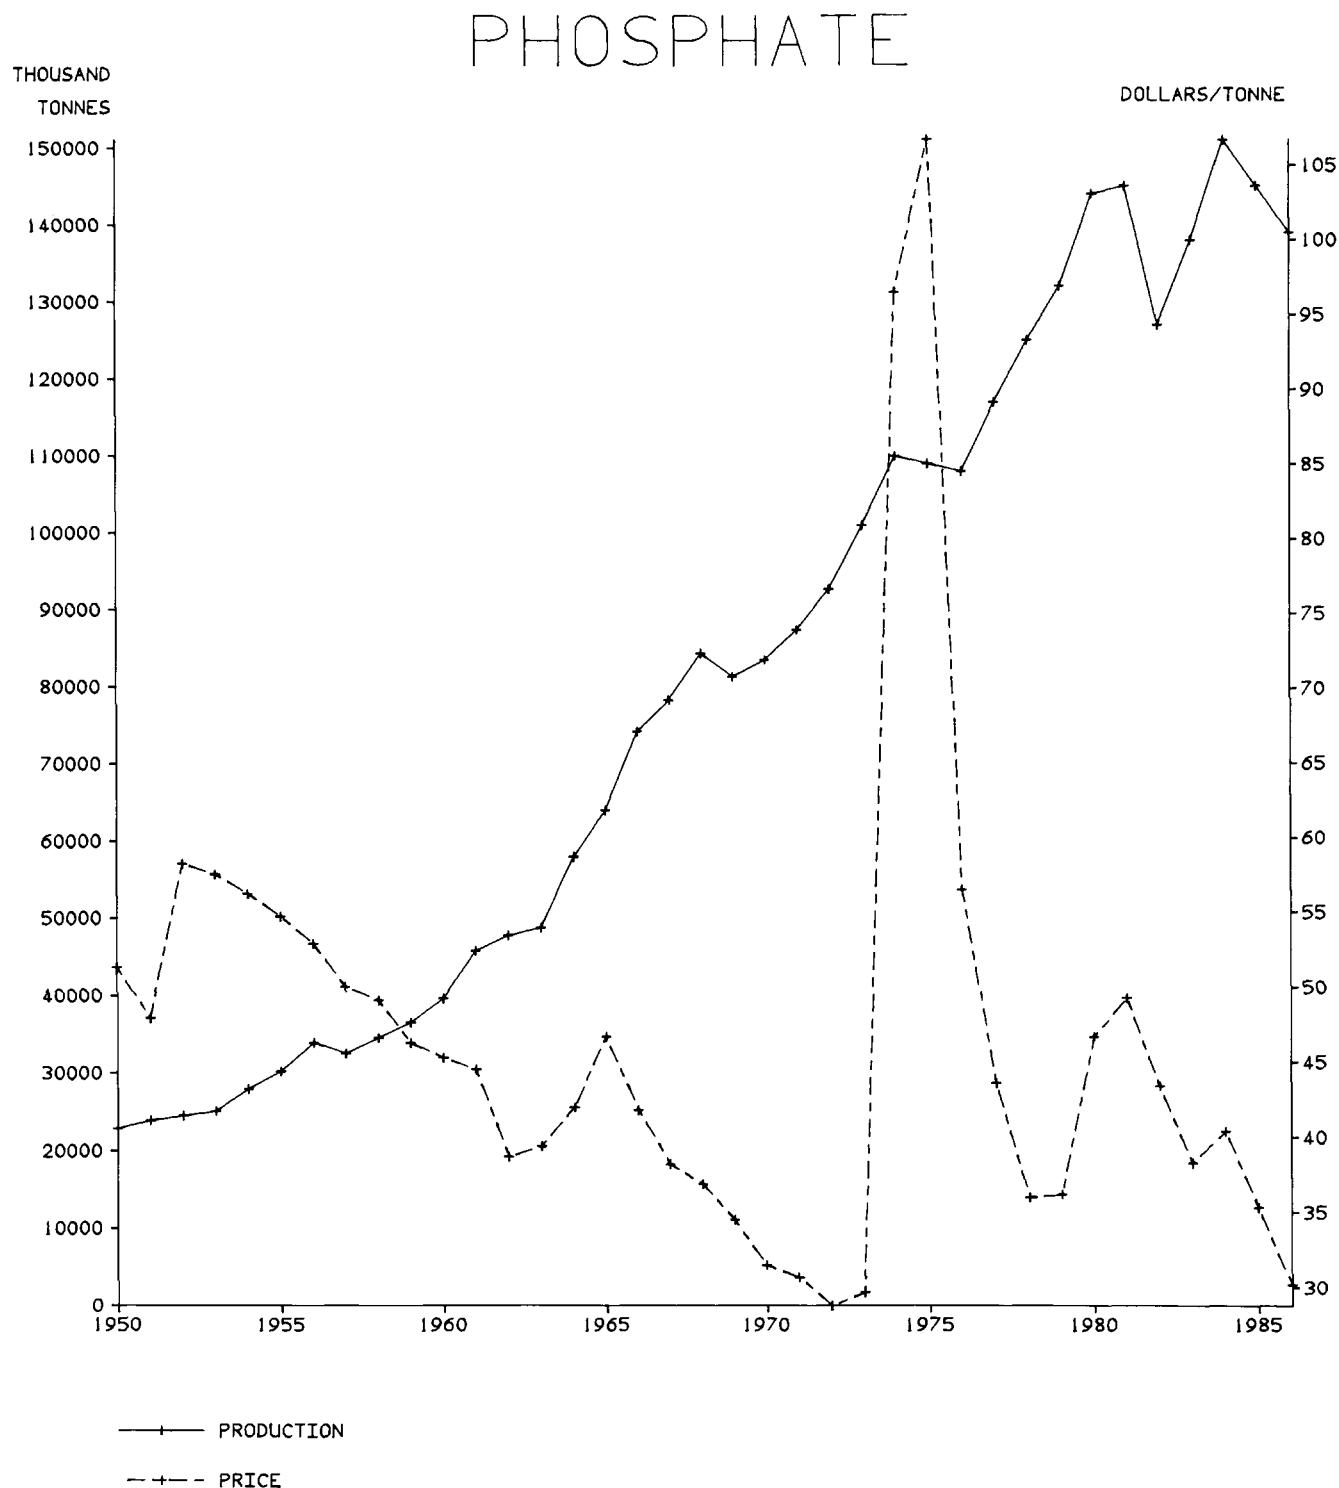

Figure 16 World production of phosphate rock from 1950 to 1986 compared with the yearly average price of Moroccan phosphate f.a.s. Casablanca expressed in constant 1980 US dollars.

Trend-line analysis of the production data indicates a growth rate of approximately 6% per annum over 37 years.

Constant commodity prices taken from Commodity Trade and Price Trends (1986) published by the Johns Hopkins University Press for the World Bank.

Notes:

- 1 Wherever possible, figures relate to quantities of platinum group metals thought to be recovered from ores originating in the country stated. Figures for metal production are only given for countries where recovery is thought to be based predominantly on domestic materials or on imported materials which have not been recorded as mine production elsewhere in the table
 - 2 In addition to the countries listed, Bulgaria, China, Indonesia, Papua New Guinea and Philippines are also believed to produce platinum group metals
- (a) Metal production
 (b) Platinum metals content of concentrates (produced from Ni-Cu ores), residues and matte exported
 (c) Years ended 6 July of that stated

Note: In this table the term 'Platinum' and/or 'Platinum metals' as used here includes unwrought, partly worked and alloys

- (a) Values shown refer to imports of 'ores and concentrates of silver, platinum and platinum metals'; it is assumed that the imports of silver ores and concentrates are negligible
- (b) Years ended 30 June of that stated
- (c) Derived from Canadian ores and concentrates exported for treatment
- (d) Platinum metals content
- (e) BGS estimates, based on known exports from certain countries
- (f) Years ended 20 March following that stated
- (g) Years ended 31 March following that stated

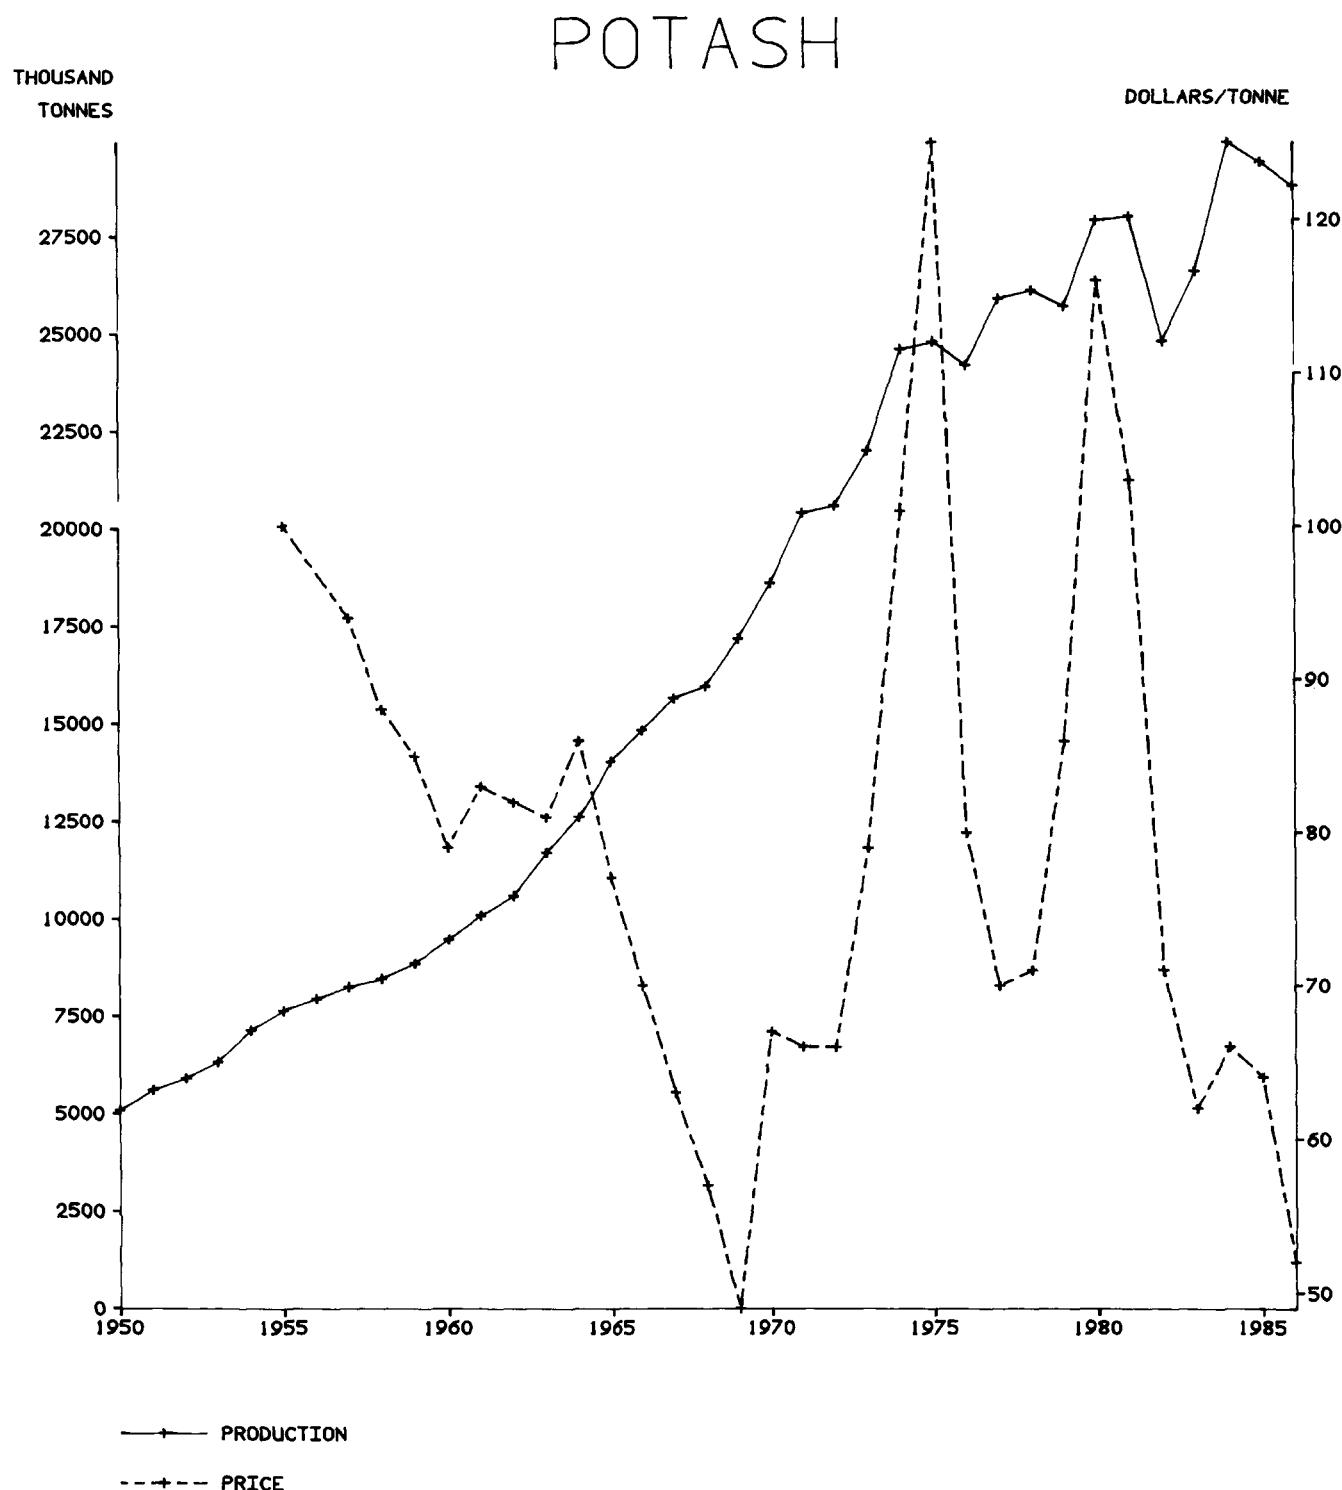

Figure 17 World production of potash (K_2O) from 1950 to 1986 compared from 1955 with the annual price (Vancouver) expressed in constant 1980 US dollars.

Trend-line analysis of the production data indicates a growth rate of approximately 5.5% per annum over 37 years.

Constant commodity prices derived from those quoted in International Financial Statistics Yearbook (1987), using the CPI for the USA from the same source.

Notes:

- 1 With the exception of the data for USA, figures in this table refer to gross tonnage of rare earth concentrates
- 2 Rare earth minerals are also believed to be produced in the Soviet Union and possibly, on a small scale, in Indonesia, Democratic P.R. of Korea and South Africa

(a) REO content

(b) Exports

(c) Expressed as weight of concentrates produced; USA production has been grossed up to concentrate equivalent on the assumption that both its bastnaesite and monazite concentrates contain 60% REO. The same percentage has been applied to the production in China

(d) Years ended 31 March following that stated

(e) Nominal capacity

Notes:

- 1 This table does not include production of refined salt
 2 Salt is known to have been produced in many countries for which statistics are not available. Among these are Martinique and Nigeria

- (a) Used for purposes other than salt-making
- (b) Brine salt
- (c) Sea salt
- (d) Years ended 6 July of that stated
- (e) Including salt in brine
- (f) Sold or used by producers
- (g) Years ended 20 March following that stated
- (h) Years ended 31 March following that stated
- (i) Government licensed plants
- (j) Years ended 30 June of that stated
- (k) Exports

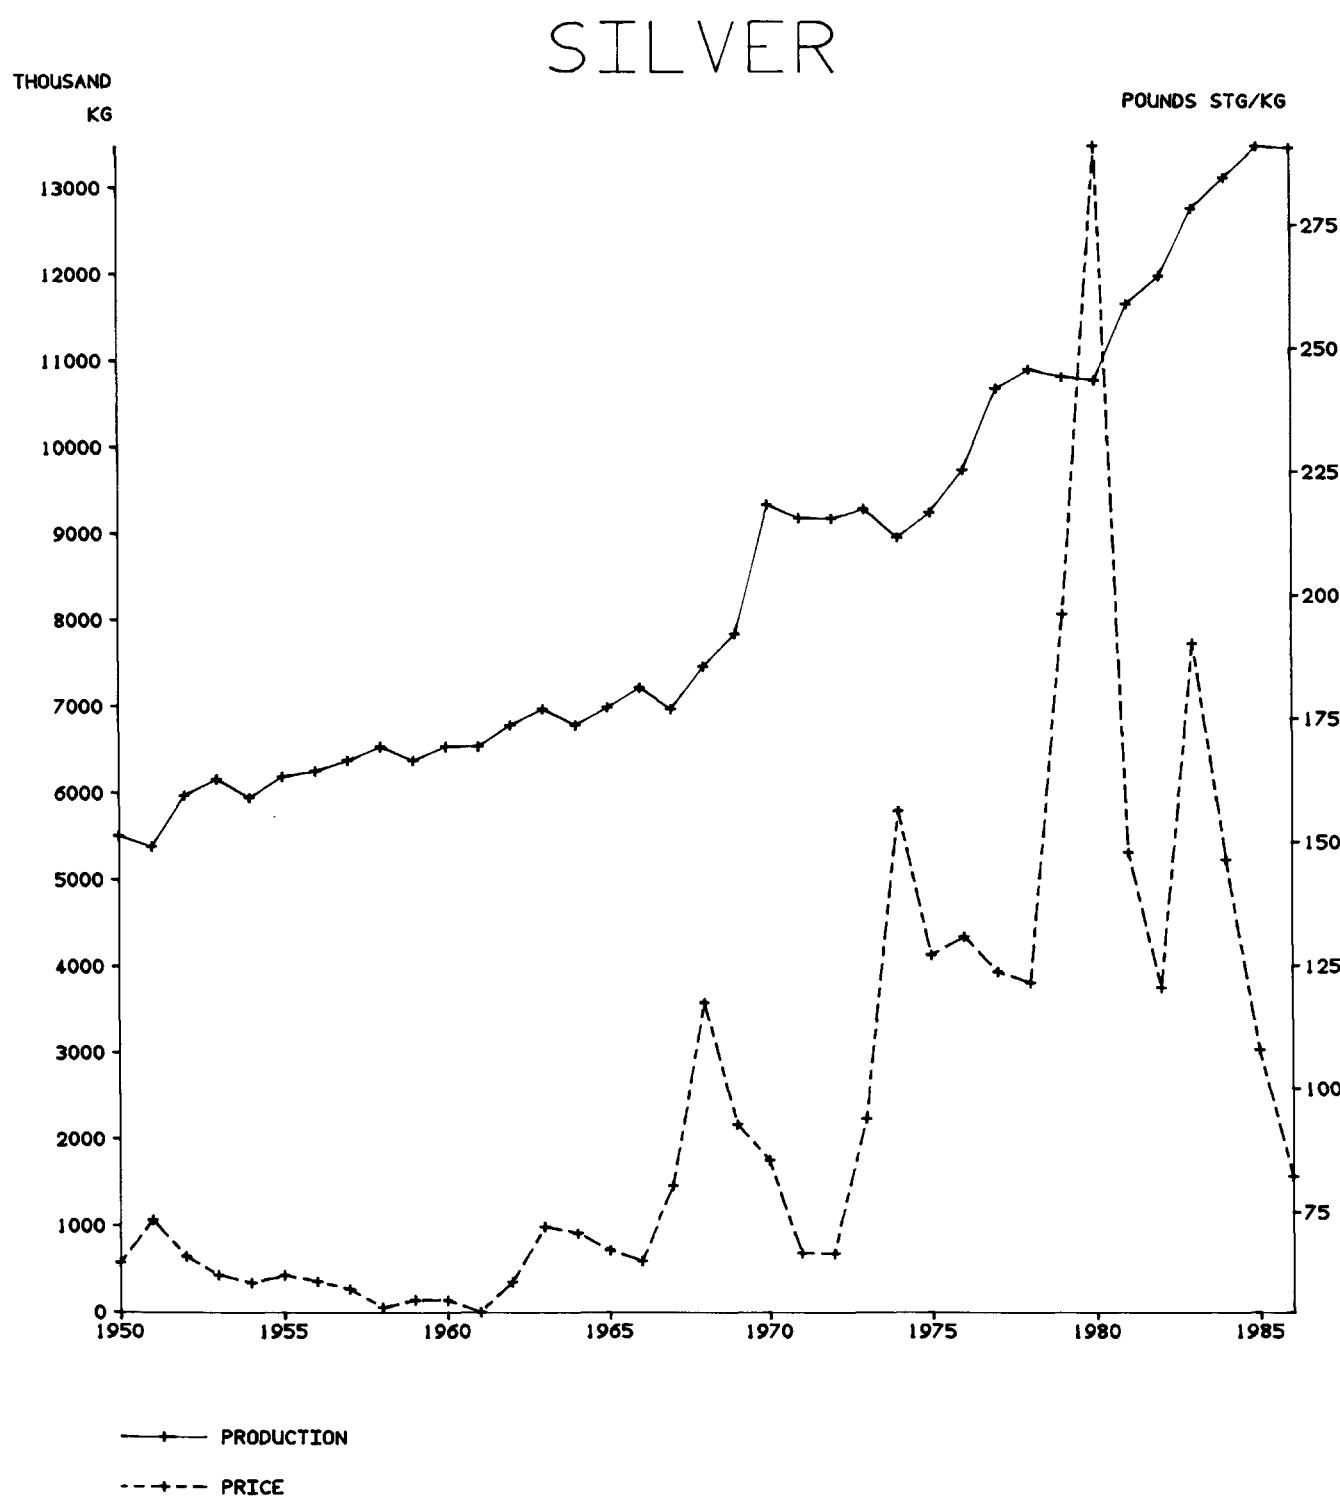

Figure 18 World mine production of silver from 1950 to 1986 compared with the annual average spot price expressed in constant 1980 pounds sterling.

Trend-line analysis of the production data indicates a growth rate of approximately 2.5% per annum over 37 years.

Constant commodity prices derived from those quoted by Metal Bulletin (1987), using the RPI for the UK obtained from the Annual Abstract of Statistics (1988) published by HMSO and pre-1967, the CPI for the UK published in International Financial Statistics Yearbook (1987).

Notes:

- 1 This table excludes silver coin but includes silver shipped for minting
 2 In this table the term 'metal' as used here includes both unwrought and partly worked silver and alloys

- (a) Including waste and scrap
 (b) Ag content
 (c) Officially described as 'dore' (Au/Ag alloy), but contains a higher proportion of silver
 (d) BGS estimates, based on known imports into certain countries
 (e) Years ended 30 June of that stated

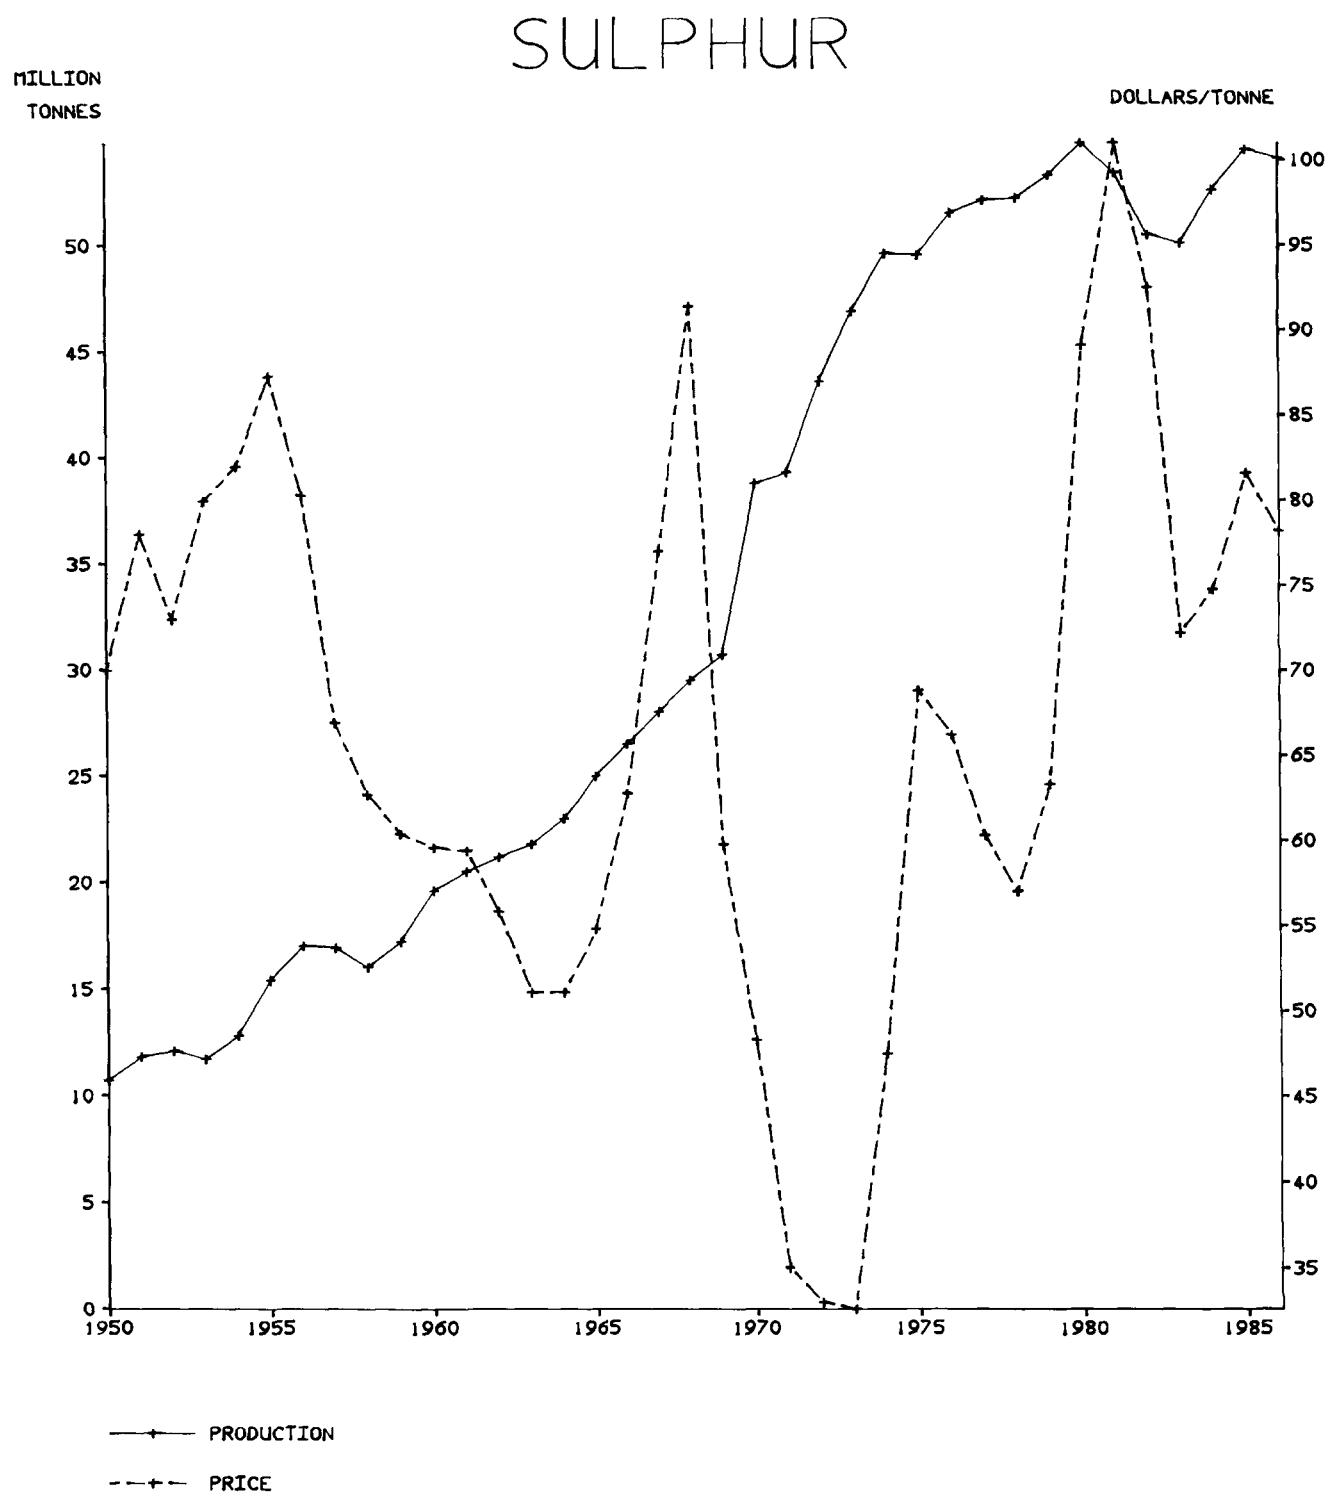

Figure 19 World production of sulphur in all forms from 1950 to 1986 compared with the annual average US price for elemental sulphur f.o.b. mine expressed in constant 1980 US dollars.

Trend-line analysis of the production data indicates a growth rate of approximately 5% per annum over 37 years.

Constant commodity prices derived from those quoted by USBM in Mineral Facts and Problems (1960 et seq.) and Mineral Commodity Summaries (1984 et seq.), using the CPI for the USA taken from International Financial Statistics Yearbook (1987).

Note: Pyrites: nominal sulphur content is shown in parentheses

- (a) 'Spent Oxide'
- (b) Includes 'caliche' at 45% S content
- (c) From smelter gases
- (d) From petroleum refining and/or natural gas
- (e) Other
- (f) Exports
- (g) Includes S content of 'sulphur ore'
- (h) Includes production from synthetic fuels

Notes:

- 1 Niobium and tantalum minerals are believed to have been produced also in the Soviet Union and China, and minor quantities in Argentina, Burundi and Zambia
- 2 The figures in this table refer to gross tonnage of tantalum and niobium concentrates. Estimated average niobium and tantalum contents of these are given in the form (Nb%, Ta%) for each country and each mineral, relating where possible to the later years
- 3 Niobium and tantalum are also recovered from tin slags. This source is particularly important in the case of tantalum and in recent years is believed to have accounted for over 60% of all tantalum recovered. No detailed information on the production of tantalum bearing tin slags is available but the major producers are Thailand and Malaysia, with small amounts from Australia, Brazil, Nigeria, Portugal, South Africa and Zaire

Notes:

- 1 The figures in this table refer to gross tonnage of titanium concentrates
- 2 Some ilmenite is converted to synthetic rutile in Australia, India, Japan, Taiwan and USA
- (a) Canada produces some ilmenite which is sold as such and not processed into slag, but tonnages are small
- (b) Includes a mixed product containing ilmenite, leucoxene and rutile
- (c) Exports
- (d) Processed into slag. In 1986, Canada produced 810 000 tonnes (80% TiO₂)
- (e) Ti content of titanium minerals and slag

Notes:

1 So far as possible, the term 'oxides', as used in this table, includes oxides and oxide based pigments classified under Standard International Trade Classification (Revision 2) items 522.46 and 533.1

2 Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys

(a) Ti content

(b) BGS estimates, based on known imports into certain countries

(c) Excluding oxide based pigments

(d) Exports to the USA only

(e) Years ended 31 March following that stated

Notes:

- 1 Significant quantities of titanium slag are traded, but it is not always possible to identify this material in national trade accounts
 - 2 So far as possible, the term 'oxides', as used in this table, includes oxides and oxide based pigments classified under Standard International Trade Classification (Revision 2) items 522.46 and 533.1
 - 3 Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys
- (a) Excluding oxide based pigments
 - (b) BGS estimates, based on known exports from certain countries
 - (c) Includes synthetic rutile
 - (d) Years ended 31 March following that stated
 - (e) Years ended 30 June of that stated
 - (f) Micronised for use as an opacifier
 - (g) Figures may be incomplete as value only given in Israeli trade return for imports from some countries

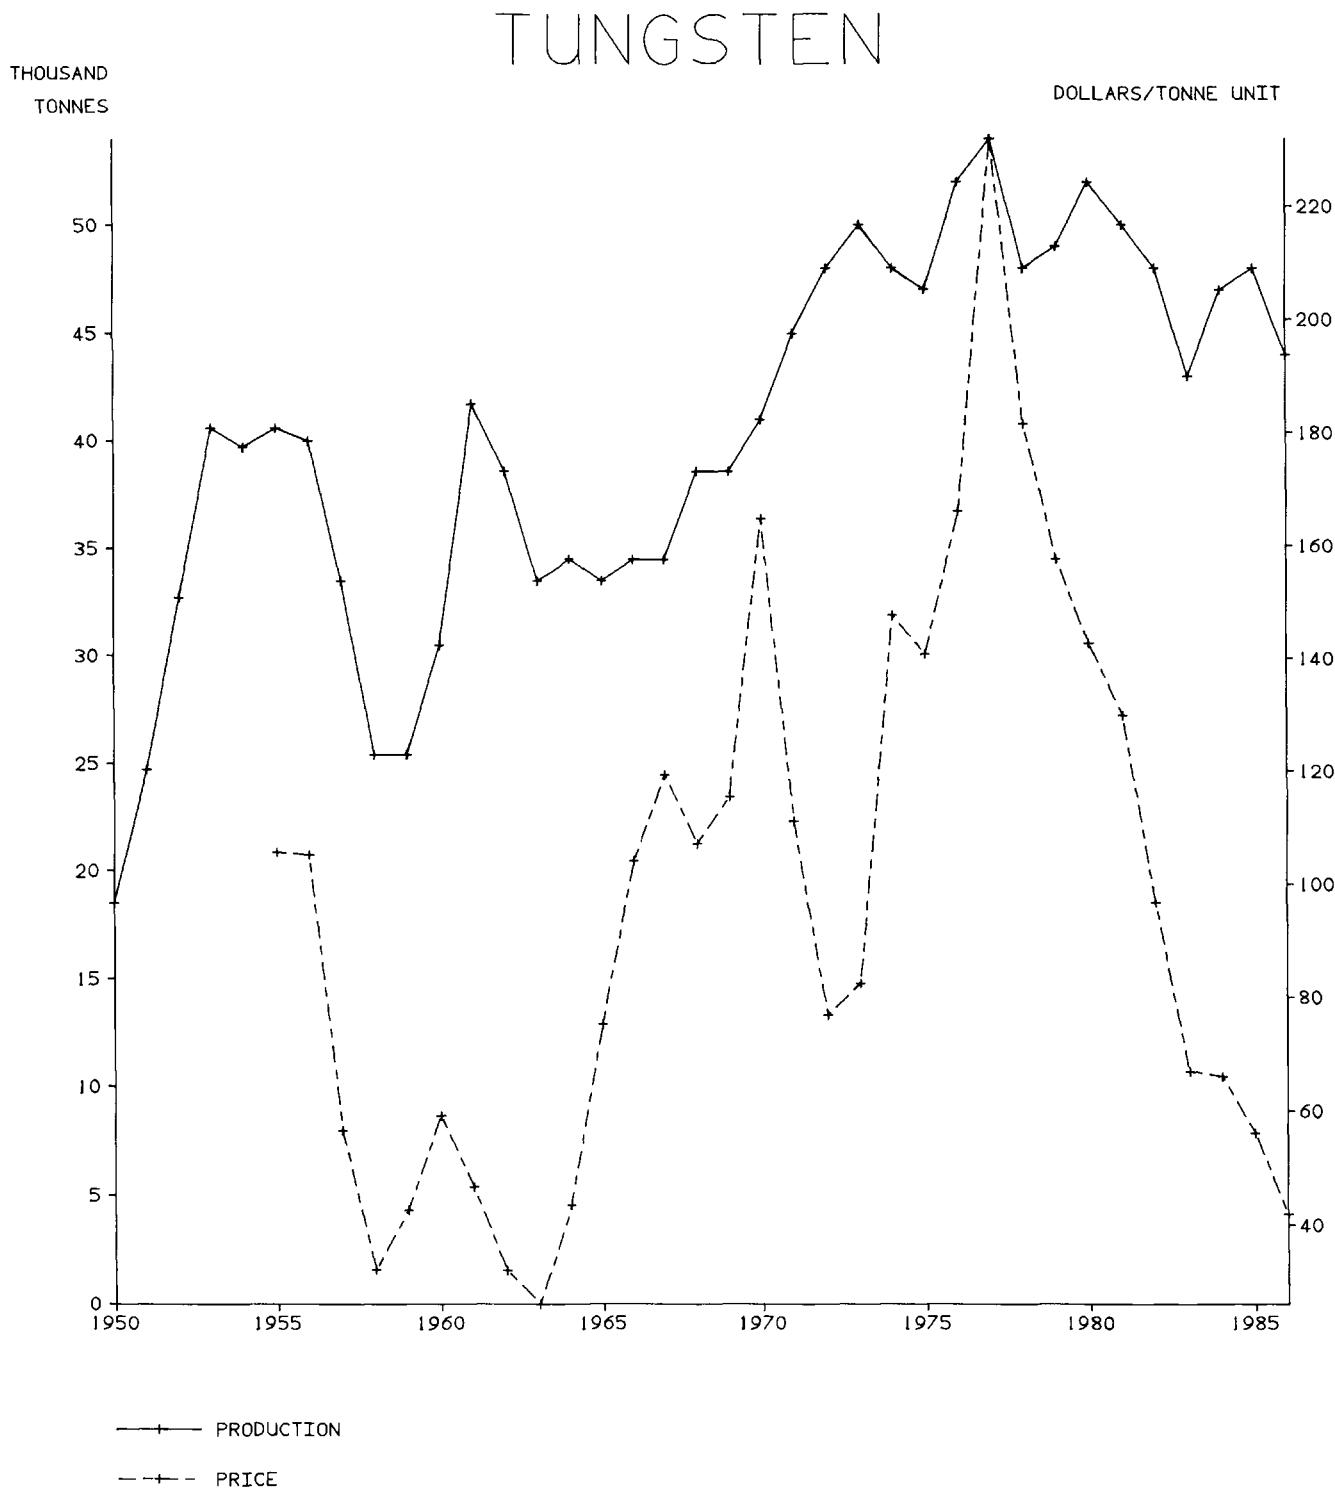

Figure 21 World mine production of tungsten from 1950 to 1986 compared with the annual average UK price from 1955 of 65% WO_3 concentrate c.i.f. European ports; post-1978 weighted average International Tungsten Indicator price, expressed in US dollars per metric ton unit of WO_3 .

Constant commodity prices derived from Tungsten Statistics (1971 et seq.) published by the United Nations, using the CPI for the USA taken from International Financial Statistics Yearbook (1987).

Pentoxide (a)	* 3 000	* 3 700	* 2 100	* 3 100	* 4 700

Notes:

- 1 In this table the term 'pentoxide' also includes vanadium oxides and hydroxides, if any
 - 2 Metal traded in ferro-alloy form is included under Iron, Steel and Ferro-alloys
- (a) BGS estimates, based on known imports into certain countries
 (b) V₂O₅ content
 (c) Includes V₂O₅ content of vanadiferous residues

Note: In this table the term 'unwrought' zinc corresponds to item 686.1 of the Standard International Trade Classification (Revision 2) and comprises blocks, pigs, slabs, etc

- (a) Including alloys
- (b) BGS estimates, based on known imports into certain countries
- (c) Zn content
- (d) Years ended 20 March following that stated
- (e) Years ended 31 March following that stated
- (f) Years ended 30 June of that stated

India	20 724	16 857	27 004	26 040	23 770

Note: In addition to the countries listed, Japan, Namibia and Turkey are also believed to produce wollastonite

APPENDIX

A brief explanation of the tables in the following pages is given in the *Explanatory Notes* at the beginning of this volume (page iv). However, it must be stressed that the totals arrived at in the trade reconstructions are necessarily conservative, since country breakdown details are not released by every trading partner. Each table, therefore, shows only the data that can be extracted from published sources and no estimates are made for countries that suppress information.
