LONDON: HER MAJESTY'S STATIONERY OFFICE
1953

This publication continues under a slightly different title the well-known series of Statistical Summaries formerly published for the Imperial Institute under the title of "The Mineral Industry of the British Empire and Foreign Countries." It is now prepared by the Statistical Section of the Mineral Resources Division of Colonial Geological Surveys which was transferred from the Imperial Institute to the Colonial Office in April, 1949.

The format and arrangement of contents of the Summary have not been altered, and, as in the case of the previous post-war issues, the statistics cover a seven-year period.

All communications should be addressed to :—

EXPLANATORY NOTES

(1) Although the statistics in this volume attempt to cover the world, it has not been possible to give complete information for some countries, especially those of eastern Europe, but in order that world totals may be arrived at, estimates for such countries have been included wherever possible.

(2) In the sections on copper, lead and zinc, tables are given showing production of both ore and metal. The ore tables give the estimated metal content of ore produced. In some cases this figure has been obtained by the use of an average assay value, in others it represents the amount of metal actually recoverable. The ore is not necessarily smelted in the country of origin. It follows, therefore, that in the metal table, the metal production for a particular country may be derived from both domestic and imported ores. Secondary metal is excluded as far as possible, but where important is shown as a footnote to the producing country.

(3) Except where otherwise stated the trade figures are intended to represent imports retained, *i.e.*, total imports less re-exports, and exports of domestic produce. In some cases, however, a certain amount of "nationalised" goods is included with domestic exports, namely goods originally imported, but which, if dutiable, have been charged with duty and subsequently re-exported. Where re-exports are not available, an indication to this effect is made by a footnote "total imports." Goods imported for "improvement" and re-exports after "improvement" are also generally included.

(4) Figures of imports and exports for certain countries are not shown. This does not necessarily mean that there is no trade in the commodity but that the item is not recorded separately in the trade returns of the country concerned. In some cases figures have been arrived at by other means, as indicated by footnotes.

(5) Fuel for bunkering, which constitutes an important part of the trade of some countries, *e.g.*, Aden, has been shown separately although in most countries where there is bunker trade the coal or oil is not produced locally. In these cases the figures given in the import tables are total imports less re-exports (not including fuel shipped in bunkers). Footnotes indicate that these imports include fuel intended for bunkering purposes and that the amount of foreign fuel shipped for this purpose can be obtained from the export tables. Thus, in order to ascertain the amount of imports retained the quantity of fuel of foreign origin exported for bunkering should be deducted from the figures shown in the import tables.

(6) Trade statistics for Malaya relate to the Colony of Singapore and the Federation of Malaya. Trade between the two colonies is not included. Production statistics relate to the Federation of Malaya.

(7) Production statistics for Swaziland and Bechuanaland are recorded separately but the foreign trade is dealt with for Customs purposes as part of the Union of South Africa.

(8) The Irish Republic is no longer included under British Countries, but for convenience is put separately between British and Foreign Countries.

(9) German statistics from 1949 onwards relate to the Federal Republic unless otherwise stated.

(10) The factors used for converting volumes of liquids into long tons are approximate only. They are shown as footnotes to the tables relating to Coal by-products and Petroleum and Allied Products.

(11) The units of quantity adopted are the cwt. of 112 lb. (avdp.); ton of 2,240 lb. (avdp.); imperial gallon and metric carat. For precious metals the troy ounce of 480 grains is used. The symbol "—" means Nil or less than half the unit shown.

Complex ores containing cobalt are produced in Greece, China and Korea, but figures are not available.

(a) Information not available.

(b) Metal recovered from smelter products plus cobalt contained in cobalt ores and residues exported.

(c) The greater part of the 1948 production was shipments from stockpiles of ores mined in earlier years.

(d) Estimated cobalt content of cobalt oxide.

(a) Information not available.

(b) Copper content of blister and anode copper.

(c) Revised.

(d) Includes secondary metal.

(e) Up to and including 1950, figures refer to black and blister copper and exclude electrolytic copper which is, in part, obtained from blister copper. Source : Centro Industrial de Vizcaya (U.N. Monthly Bull. of Stats.). In 1951 figures refer to blister copper only.

(f) Revised. Figures now exclude secondary metal from fire-refined scrap which was as follows (long tons) : 1946—11,610; 1947—13,464; 1948—22,263; 1949—41,767; 1950—59,098; 1951—57,296.

* Some countries record the trade of Gold by value only. In such cases the weight has been obtained by dividing this value by the official annual average price of gold per fine ounce but in no case has any account been taken of the premium. Countries for which this conversion has been effected are marked with an asterisk.

(a) Information not available.

(b) Also included with Kenya up to 1948 inclusive.

(c) Sea-borne trade only.

(d) Including Uganda up to 1948 inclusive.

* This table refers to the more important products obtained and does not include in some cases items classified as "other products". It follows, therefore, that the sum of the products shown for a particular country does not necessarily represent the total refinery products produced.

(a) Information not available.

(b) Including the amounts used at the refineries. In the case of Fuel oil these amounts are shown separately.

(b) It is estimated by the Department of Mines, Union of South Africa, that the osmiridium sold during these years contained the following amounts of the metals mentioned below (fine ounces):—

	1945	1946	1947	1948	1949	1950	1951
Osmium	1,976	1,970	1,859	1,679	2,213	1,710	1,774

Rhodium	49	47	42	37	56	52	57

(c) From 1945 inclusive the figures refer to the metal content of concentrates produced from nickel-copper ores.
Prior to that year the figures represented refined metals recovered plus the content of concentrates sold.

The 1945 figures include an accumulated revision of previous years.

* Imports of ilmenite are generally not separately recorded in Customs Returns.

(a) Information not available.

(b) As recorded in the official trade returns. In addition the U.S. Bureau of Mines records the following amounts of Ilmenite and Rutile contained in "zirconium ores" imported from Australia (long tons):—

		Ilmenite	Rutile
1945	(c) 1,104	6,516
1946	1,239	1,300

(c) Includes 276 long tons not recovered from mixed concentrates.

(d) In addition the U.S. Bureau of Mines records 4,519 long tons of Rutile contained in "Ilmenite" imported from Australia.

(e) Year ended June 30 of that stated.
