The full range of Survey publications is available from the BGS Sales Desks at Nottingham, Edinburgh and London; see contact details above or shop online at www.geologyshop.com

The London Office also maintains a reference collection of BGS publications, including maps, for consultation.

The Survey publishes an annual catalogue of its maps and other publications; this catalogue is available from any of the BGS Sales Desks.

The British Geological Survey carries out the geological survey of Great Britain and Northern Ireland (the latter as an agency service for the government of Northern Ireland), and of the surrounding continental shelf, as well as its basic research projects. It also undertakes programmes of British technical aid in geology in developing countries as arranged by the Foreign, Commonwealth & Development Office.

The British Geological Survey is a component Institute of UK Research and Innovation (UKRI).

PREFACE

Welcome to the latest edition of World Mineral Production which includes global mineral production data for 2022. It is a continuation of the dataset that began in 1913.

This publication is compiled from a comprehensive database, maintained by the British Geological Survey (BGS), through which we aim to provide a reliable and continuous set of data covering most of the minerals that enter international trade. In this volume we set out the production figures by country for more than 70 mineral commodities over the five-year period from 2018 to 2022. The objective of this series remains to present the latest production information obtained from official bodies in individual countries, although other sources are also used to ensure completeness and accuracy. The cooperation afforded to the BGS by numerous organisations is gratefully acknowledged.

Toward the end of the first quarter, 2022 witnessed the start of the Russian conflict with Ukraine. This has caused a serious decline in the mineral industry in Ukraine. Every mineral commodity produced showed a decrease by at least 30 per cent. Commodities most affected were copper with a 91 per cent decrease on the previous year followed by aluminium (83%) and uranium (78%). As a result of the conflict, many countries are trying to reduce their reliance on minerals sourced from Russia, but this can prove challenging as it is one of the largest mineral producing nations in the world.

2022 also saw an increase in energy prices across Europe. This had an effect on the energy dependent commodities in the alumina, primary aluminium and zinc producing companies. Industry requested the European Commission step in and help. In quarter three a 'Temporary State Aid Framework' was set up, but this proved too late for some companies, and they were forced to reduce or halt production. Alumina production in Europe dropped by more than 25 per cent in 2022. This subsequently also affected the aluminium industry, in which by the end of 2022 production had also fallen by 2.5 per cent to the lowest in at least 5 years. After making a good recovery in 2021, global zinc production decreased by more than 18 per cent in 2022. Over 50 per cent of zinc producing European countries dropped in production based on 2021. Worst affected appear to be Poland, production declining 84 per cent, followed by Greece at 54 per cent.

Certain commodities continued to experience significant reductions in production during 2022 following on from 2021. Mercury production declined again by 19 per cent on the 2021 figure. Antimony production in China continued to decline and decreased by a further 8.5 per cent on 2021. Over a 5-year period antimony production in China has halved as China continues to have a greater reliance on imported antimony.

Barytes has decreased by 21 per cent over the past 5 years. China and India combined account for almost 50 per cent of the total world production. Barytes production in both countries has decreased considerably (India by 37% and China by 34%). Much of the barytes is mined by the petroleum industry and used as a weighting material in the formulation of drilling mud. This drop in production is expected to be short term. High production levels of oil & gas in USA, Canada, Middle

East and Africa are expected to increase the demand for barytes production.

Global production of vanadium decreased on the previous year by 3 per cent. However, over a 5-year period it has increased by over 40 per cent. At 68 percent of world production, China continued to be the largest producer of vanadium, followed by Russia and South Africa (18% and 8%). Vanadium has many uses, one of these being primarily as an alloying element in the production of high-strength steel. Growth in the construction, infrastructure development, and automotive industries resulted in higher steel demand, thereby increasing demand for vanadium.

A few commodities increased considerably during 2022. Global production of lithium, zirconium and cobalt continued to increase by more than 20 per cent on 2021. Lithium production increased the most in 2022 at 27 per cent per. Over a 5-year period lithium production has increased by 49 per cent, showing longer-term growth.

Zirconium increased significantly in 2022 by 26 per cent. Australia is the largest producer, providing 37 per cent of the total world production, followed by South Africa and Mozambique (22% and 7%). The increasing production of zirconium is propelled by the global pursuit of cleaner energy alternatives and the establishment of new nuclear power facilities in numerous countries. Zirconium is vital for use in nuclear reactor fuel rods and various components. Zirconium is expected to continue to increase as nations endeavour to reduce carbon emissions and broaden their energy sources.

The world's largest producing country of nickel is Indonesia, accounting for 49 per cent of total world production, followed by Philippines (11%) and Russia (6%). Indonesia nickel production has increased by 47 per cent in 2022 on 2021, and over five years nickel has increased by 160 per cent. Global nickel production in the last 5 years has increased by 37 per cent, driven by the huge growth in Indonesia. With the continued underlying growth of nickel compounds for the electric vehicle batteries sector, the continued increase in nickel production will be needed.

International interest in the security of supply of minerals continues to grow. The UK Critical Minerals Intelligence Centre (CMIC) is hosted by the BGS. Notable publications during the last year include a 'Scoping report on the material requirements for a UK hydrogen economy' which examines the sustainability of these targets and provides suggestions for overcoming potential challenges in securing raw material. Also, a 'Scoping study on metals used in specialist alloys in the aerospace industry.' These and other reports can be downloaded from the CMIC website (<https://ukcmic.org/>).

As always, I would welcome any comments and suggestions that you have relating to this volume, which might help us to meet your ongoing needs.

EXPLANATORY NOTES

Coverage

World Mineral Production covers the majority of economically important mineral commodities. For each commodity constant efforts are made to ensure that as many producing countries as possible are reported. For some commodities, where statistics on production are not publicly available, estimates are made. Users of this compilation are advised that more statistical information than can be included in a publication of this nature is held in the British Geological Survey files and is available for consultation. Historical data (from 1913 for many commodities) can be obtained from the predecessors to this series entitled *World Mineral Statistics* and the *Statistical Summary of the Mineral Industry*. Copies of these publications are available in the World Archive section of the website: www.mineralsUK.com.

Arrangement of countries

Countries are ordered alphabetically in geographical groupings as follows:

Europe
Africa
North and Central America, including the Caribbean
South America
Asia
Australasia, including the Pacific Islands

Metals

Mine production of many metals is expressed in terms of metal content. This is clearly indicated at the head of the table, adjacent to the unit used. For aluminium, cobalt, copper, iron, lead, nickel, tin and zinc, mine production and metal production are shown in separate tables. Unless otherwise specified, metal production statistics relate to metal recovered from both domestic and imported materials, whether primary or secondary, but exclude remelted material wherever possible.

World totals

For certain minerals and metals no world total is shown due to the non-availability of certain individual country totals.

Exclusion of Warranty

Use by recipients of information provided by the BGS, is at the recipients' own risk. BGS has taken care to ensure that information provided is as free from error as is reasonably practical. In view of the disparate sources of information at BGS's disposal, including such material donated to BGS, that BGS accepts in good faith as being accurate, the UK Research and Innovation (UKRI) and the Natural Environment Research Council (NERC) give no warranty, expressed or implied, as to the quality, accuracy, performance, and merchantability of the information supplied, or to the information's suitability for any use whether made known to BGS or otherwise. UKRI/NERC/BGS accepts no liability whatever in respect of loss, damage, injury or other occurrence however caused.

Acknowledgements

Compilation of this volume of mineral statistics has been possible only by obtaining information from a very large number of organisations throughout the world, chiefly home and overseas government departments and specialist national or international authorities concerned with particular sectors of the minerals or metals industries. To all these bodies the British Geological Survey expresses its grateful acknowledgement for the information made available, whether in published form or provided by direct correspondence. Particular acknowledgement is made to the Mines Departments and other government agencies of many countries whose regular statements, yearbooks and other reports are worthy of direct consultations by readers in search of detail.

Specialist commodity organisations which have kindly allowed information to be reproduced include the International Copper Study Group, the International Lead and Zinc Study Group and the International Nickel Study Group. In a few instances, information on specific commodities has been obtained directly from company sources. The co-operation of other members of the International Consultative Group on Non-Ferrous Metal Statistics is also gratefully acknowledged.

Appendix 2 contains a fuller list of organisations to whom acknowledgement is made.

Units

The Statistics shown in this volume are expressed in metric units. The following factors are given for converting to metric units:

long tons $\times 1.0161$ = tonnes
short tons $\times 0.9072$ = tonnes
pounds $\times 0.4536$ = kilograms
troy ounces $\times 0.0311$ = kilograms
cubic feet $\times 0.0283$ = cubic metres
1 barrels of crude petroleum $\times 0.1364$ = tonne of crude petroleum
1 flask mercury = 34.7 kilograms

Note(s)

- (1) Where possible figures in this table show the alumina equivalent (Al₂O₃) of total hydrate produced, whether or not calcined.
- (2) The figures in this table represent alumina produced from bauxite. Alumina-rich materials can also be derived from salt slags formed during the production of secondary aluminium.

See notes on the following page

Production of bentonite and fuller's earth

Note(s)

- (1) Bentonites consist of montmorillonite (one of the smectite group of clay minerals) and occur in two main varieties, calcium bentonite, the most commonly occurring, and sodium bentonite, industrially the more important.
 - (2) Calcium bentonite can be converted to sodium bentonite by a sodium-exchange process.
 - (3) In some countries, such as the United Kingdom, calcium bentonite is known as fuller's earth, a term which is also used to refer attapulgite, a mineralogically distinct clay mineral but exhibiting similar properties.
 - (4) In addition to the countries listed, Vietnam may produce bentonite and Algeria, France, Iran and Japan may produce fuller's earth.
- (a) Sales
 (b) Smectite
 (c) Sold or used by producers
 (d) Years ended 31 March following that stated
 (e) Years ended 20 March following that stated
 (f) Years ended 30 June of that stated
 (g) Including attapulgite and sepiolite

Production of beryl

tonnes (metric)

Country	2018	2019	2020	2021	2022
Madagascar (a)	* 16	* 16	* 16	* 16	* 16
Mozambique	416	45	80	330	1,285

Note(s)

- (1) The figures in this table are in some instances derived from reported bismuth content of refined and impure metal plus recoverable in ores and concentrates exported.
- (2) Production for some countries may include bismuth produced from imported ores but it is thought that any resulting duplication is insignificant in the countries shown.
- (3) In addition to the countries listed, the Republic of Korea may produce bismuth but data are confidential.

Production of coal

Note(s)

- (1) There is no international agreement as to the separate definition of lignite and brown coal. In some cases they are distinguished. Elsewhere both may be aggregated under one or other term.
 - (2) Data for coking coal is not always distinguished from other types of bituminous coal. The term "bituminous" in this table may include coking coal where the latter is not separately shown.
 - (3) Where no sub-commodity is shown the figures relate to all ranks of coal.
- (a) Spitzbergen: not including production from mines controlled by Russia
 (b) Excluding production in Kosovo
 (c) Including lignite
 (d) May also include other types of coal
 (e) Years ended 20 March following that stated
 (f) Years ended 30 June of that stated
 (g) Years ended 31 March following that stated
 (h) Years ended 15 July of that shown
 (i) Including sub-bituminous

Mine production of cobalt

Note(s)

- (1) There is frequently a considerable disparity between the cobalt content of ore raised and cobalt actually recovered.
- (2) In many countries it is not clear whether cobalt that is known to be present in the extracted ore is subsequently recovered, nor whether the reported figure is contained or recovered cobalt.
- (3) Consequently, the figures in this table may relate either to cobalt recovered or to cobalt contained in ore raised.
- (4) In addition to the countries listed, cobalt is contained within copper ores in Poland but this is not currently recovered.

(a) Metal and/or refined

(b) Years ended 30 June of that stated

Note(s)

(1) Refined cobalt can be in the form of metal, oxides, carbonates, sulphates and many other compounds. Efforts are made to avoid double-counting but it is not always possible to be certain.

- (a) Some refined cobalt production in China is recorded in Belgium
- (b) Excludes white alloy and matte which are believed to be further processed in Belgium and elsewhere
- (c) Includes metal and cobalt contained in sulphate
- (d) Including oxides
- (e) Carbonate

- (c) Years ended 20 March following that stated

Production of primary gallium

tonnes (metric)

Country	2018	2019	2020	2021	2022
Russia	* 13	* 13	* 13	* 13	* 5
Ukraine	* 4	* 8	* 4	* 4	* 2
China	404	357	336	423	* 400
Japan	3	3	3	3	* 3
Korea (Rep. of) (a)	* 3	* 3	* 2	* 2	* 2

Note(s)

- (1) Accurate data for gallium is difficult to obtain because it is produced only as a by-product of bauxite or zinc processing using proprietary techniques. As a consequence, this table may not be complete.
- (2) Lower grade production is often subsequently refined to higher grade material which complicates the collection of data as double counting is a significant risk.
- (3) In addition to the above primary production, there is also believed to be significant production of refined gallium from scrap recycling.

(a) Primary production only

Production of germanium metal

tonnes (metric)

Country	2018	2019	2020	2021	2022
Russia	* 6	* 5	* 5	* 5	* 5
USA (a)	* 3	* 5	* 5	* 6	7
China	95	86	* 95	* 155	180

Note(s)

- (1) Germanium is also believed to be recovered from imported or domestic material in Belgium, Canada, Germany, Japan and Ukraine.

(a) Including production of secondary metal

Mine production of gold

In addition to 'industrial scale' gold mines around the world, a significant quantity of gold is mined by small scale or artisanal producers, both on a legal and illegal basis. In some countries the quantities involved with artisanal mining can be relatively large. The compilation of reliable data for the quantity produced by artisanal mining in each country is difficult, particularly where the actions are illegal. Artisanal mining can be seasonal, temporary and highly variable, on both geographical and temporal scales.

Where possible, the table attempts to include estimates for artisanal mining of gold in order that the calculated world totals are as complete as possible. However, the difficulties noted above mean that these totals cannot be completely accurate, and they are consequently rounded to a greater degree than the individual country figures may suggest is appropriate. This is an attempt to convey the level of uncertainty associated with these total figures.

For clarity, additional comments on specific countries are shown below (there may be other countries where artisanal mining also occurs; these comments are not intended to be exhaustive): -

Benin – artisanal gold mining is known to take place, but no reliable estimates are available.

Burkina Faso – official figures include an estimated 270 kg for artisanal mining in 2022; 270 kg in 2021; 332 kg in 2020; 259 kg in 2019 and 306 kg in 2018. It is believed the actual artisanal production is likely to be higher.

Cameroon – all gold mining is currently small scale or artisanal. Available estimates vary widely, from as low as 200 kg per year to something in the order of 1500 kg per year.

Central African Republic – artisanal gold mining is known to take place. No reliable estimates are available, but it could be in the region of 50-80 kg per year. The figures shown are reported and it is assumed these are artisanal, but they may not be fully inclusive in every year.

Colombia – Artisanal and small-scale mining, both legal and illegal, is extensive within Colombia. Although the government is taking steps to improve the licencing of legal artisanal mining and to crack down on illegal activities, during the last decade it is believed that illegal mining has grown to the extent that it has become more widespread than legal mining. Some illegal mining and trade are thought to be coordinated by organised crime groups. It is possible that illegally mined material is brought into or out of the country without being recorded. It can therefore be assumed that the total mine production of gold significantly exceeds the reported figure, however it has not been possible to make a reliable estimate for this additional material.

Congo – all gold mining is believed to be small scale or artisanal and it is believed there are more than 200 locations where this occurs. A nominal estimate of 150 kg per year is shown in the table.

Costa Rica – all gold mining is currently artisanal. The figures in the table are reported by an official source.

Côte d'Ivoire – efforts are being made within Côte d'Ivoire to rationalise artisanal mining as part of the EITI process. The EITI reported figures do include an amount for reported artisanal and semi-industrial mining between 100 to 300 kg. However, reports suggest that it varies considerably from year to year and may range between 1000 kg and 10 000 kg per year.

Democratic Republic of Congo – artisanal mining is quite extensive, the figures shown include estimates for artisanal mining ranging from 4000 to 11000 kg per year.

Equatorial Guinea – artisanal gold mining is very likely to be taking place, but no accurate information is available. A nominal estimate of 200 kg per year is included in the table but it could be more or less than this.

Ethiopia – small scale and artisanal gold mining is significant, but not all of it is illegal because some artisanal miners operate under a formal license. A proportion of the gold mined from artisanal sources is sold to the national bank but illicit sales to non-licensed buyers remains widespread. National bank purchases of gold from artisanal sources in fiscal year 2017/18 amounted to 823 kg and in 2018/19 to 3 179 kg. Actual artisanal production could be higher.

France (French Guiana) – the table includes an estimate of 5000 kg to 10000 kg per year for artisanal mining which is not included in the official reported figures.

Gabon – attempts to regulate artisanal gold mining are being undertaken with gold from artisanal miners being purchased by a government agency from 2013. The figures in the table include 40 kg for artisanal mining in 2017. Data from 2018 onwards is all artisanal.

Ghana – gold produced by artisanal mining is purchased by a state-owned marketing organisation, but official figures of the quantity vary depending on the source. They are also reported in publications produced by under the Extractive Industry Transparency Initiative (EITI). In the table below the following figures are included for artisanal production: 45 992 kg in 2017; 61 812 kg in 2018; 52,229 kg in 2019; and 36 547 in 2020.

Guinea – the figures in the table include reported figures for artisanal mining. However, actual artisanal production may be higher than those reported because it is difficult to distinguish the material derived from artisanal mining within Guinea from that moved across the border from Mali or other countries.

Kenya – The reported figures shown include an amount for artisanal mining but in reality, it could be much higher.

Liberia – official figures are believed to include both the industrial mine and artisanal production.

Madagascar – estimates of artisanal mining are in the order of 100 kg to 3000 kg per year, but reliable data is difficult to obtain so are not included in our figures.

Mali – the figures include an estimate for artisanal mining of 6000 kg per year, but it is likely the real figure varies more than this from year to year.

Mozambique – artisanal mining is widespread in the country and artisanal miners account for significant percentage of Mozambique's gold. Most is not reported and therefore not included in our figures. The Government as of 2021 is trying to make a concerted effort to account for the artisanal mining.

Myanmar – the figures shown in the table are reported and are believed to include artisanal mining.

Nigeria – Official reporting of artisanal gold production by the Ministry is low (355 kilograms in 2021). However, imports of gold to other countries from Nigeria are reported to be much larger, which suggests the quantity of production may be higher and the estimates in the table reflect this. The EITI reports plan for formalising the artisanal mining sector and for the support of 10 000 artisanal miners in five regions of the federation.

Panama – artisanal mining is known to occur, but no reliable estimates are available. A nominal estimate of 100 kg per year has been included.

Papua New Guinea – official estimates of "alluvial and small scale" mining are approximately 3500 to 4000 kg per year.

Rwanda – it is believed that the reported and estimated figures are actually gold that originated in Nigeria or other countries in the region but is not recorded in those countries.

Senegal – an estimate of between 2000kg and 4000kg has been added to each year for artisanal mining.

South Africa – illegal artisanal mining is known to occur. No information on reliable estimates.

South Sudan – artisanal mining is known to occur, but reliable estimates are difficult to obtain. It has been estimated as approximately 200 kg per year.

Tanzania – Artisanal mining is known to occur; the reported figures are believed to include artisanal mining.

Togo – the reported figures are exports of gold which is transiting through the country. It is believed the majority of this originates in Burkina Faso from artisanal mining, but it is not recorded within the production figures for that country. Consequently, it is recorded here for completeness. Some artisanal mining is also believed to occur in Togo.

Venezuela – artisanal mining is believed to be quite extensive and increasing. Estimates of quantities vary widely from less than 1000 kg up to 9000 kg per year. The Central Bank aims to purchase all the artisanally mined gold, however, actual output is believed to be larger than the reported figures and therefore higher estimates have been used.

Vietnam – artisanal mining is believed to be taking place at the site of a former industrial mine. No information is available to indicate likely scale.

Note(s)

- (1) In several countries substantial amounts of gold produced in small and/or artisanal operations are not recorded in the official statistics.
Estimates have been added where possible but these have varying degrees of uncertainty.

- (2) In addition to the countries listed, Cambodia, El Salvador, Haiti, Malawi, Pakistan, Paraguay and Portugal may produce gold.

- (a) Metal production
- (b) Years ended 7 July of that stated
- (c) Exports
- (d) Contained in blister copper, refinery muds and electrolytic copper
- (e) In addition some gold produced by artisanal mining
- (f) Years ended 31 March following that stated
- (g) Years ended 20 March following that stated

Note(s)

- (1) Some countries produce large quantities of synthetic gypsum. Where possible, this output is excluded from the table.
(2) In addition to the countries listed, Indonesia and Vietnam may also produce gypsum.

- (a) Including anhydrite
- (b) Excluding output from the region east of the River Nistru and the Municipality of Bender
- (c) Sales
- (d) Years ended 30 June of that stated
- (e) Years ended 7 July of that stated
- (f) Years ended 31 March following that stated
- (g) Including selenite
- (h) Years ended 20 March following that stated

Note(s)

(1) The data in this table include sponge iron and direct reduced iron (DRI), where these have been separately identified.

- (a) Includes ferro-manganese
- (b) Including sponge iron

Production of crude steel

tonnes (metric)

Production of kaolin

Note(s)

(1) In addition to the countries listed, Denmark is believed to produce kaolin.

- (a) Sales
- (b) Beneficiated
- (c) Washed and dried
- (d) Washed
- (e) Years ended 7 July of that stated
- (f) Sold or used by producers
- (g) Beneficiated; excludes directly used natural kaolin
- (h) Years ended 31 March following that stated
- (i) Years ended 20 March following that stated
- (j) Years ended 30 June of that stated

Note(s)

(1) In addition to the countries listed, Bulgaria is believed to produce magnesite.

(a) Chloride produced from solution mining

(b) Officially described as magnesitic dolomite and brucite

(c) Including beneficiated and directly shipped material

(d) Years ended 31 March following that stated

(e) Years ended 20 March following that stated

(f) Magnesium chloride

(g) Years ended 30 June of that stated

Production of primary magnesium metal

tonnes (metric)

Country	2018	2019	2020	2021	2022
Russia	15 753	15 336	12 795	15 000	* 15 736
Turkey	* 4 500	* 4 500	* 4 500	* 4 500	* 4 500

Korea (Rep. of)	110	—	—	—	—

Note(s)

(1) In addition, substantial quantities of magnesium compounds are produced by, used and recycled within the process of titanium sponge production. It is believed this relates to the mineral carnallite and/or secondary magnesium chloride compounds.

(2) Magnesium used within the process of titanium sponge production is not marketed as primary magnesium metal and is therefore excluded from this table. Annual quantities are likely to be approximately: China 150,000 t, Japan 50,000 t and Russia 25,000 t.

Note(s)

(1) The figures shown in this table include natural gas liquids.

- (a) Including oil from shale and coal
- (b) including natural gas liquids
- (c) From oil shale Production of crude
- (d) Years ended 31 March following that stated
- (e) Including shares of production from the Neutral Zone
- (f) Years ended 30 June of that stated

Note(s)

(1) In addition to the countries listed, Indonesia and Nigeria are believed to produce phosphate rock.

- (a) Years ended 30 June of that stated
- (b) Including lime phosphates
- (c) Including beneficiated and directly shipped material
- (d) Exports
- (e) Including phosphate dust
- (f) Years ended 31 March following that stated
- (g) Years ended 20 March following that stated

Note(s)

- (1) Wherever possible, figures relate to quantities of platinum group metals thought to be recovered from ores originating in the country stated.
- (2) South Africa thought to be the only country to produce osmeium, however data is unavailable.
- (3) Figures for metal production are only given for countries where recovery is thought to be based predominantly on domestic materials or on imported materials which have not been recorded as mine production elsewhere in the table.
- (4) In addition to the production listed, concentrates produced in Spain, and possibly other countries, are believed to be processed in China to recover platinum group metals.

(a) Years ending 7 July of that stated

Note(s)

- (1) All the figures in this table are either reported as rare earth oxides or are calculated to rare earth oxide equivalent.
- (2) Prior to the 2005-2009 edition of this book, a table for the production of 'rare earth minerals' was included rather than the current 'rare earth oxides'. Users should exercise caution when comparing statistics over longer time periods.
- (3) Although rare earth minerals are believed to be extracted in other countries, there is insufficient evidence to estimate the quantities of contained oxides.
- (4) Where possible, data are shown against the country where the mineral is mined.

(a) Includes production from iron ore extraction, bastnasite concentrates and ion absorption clays

(b) Years ending 31 March following that stated

(c) Years ending 30 June of that stated

Note(s)

- (1) This table does not include production of refined salt.
- (2) Salt is known to be produced in many countries for which statistics are not available.

- (a) Exports
- (b) Sea salt
- (c) Sales
- (d) Years ended 30 June of that stated
- (e) Years ended 7 July of that stated
- (f) Lake salt
- (g) Including salt in brine
- (h) Sold or used by producers
- (i) Years ended 20 March following that stated
- (j) Seasons beginning in November and ending in May of the year stated.
- (k) Years ended 31 March following that stated

Production of refined selenium

tonnes (metric)

Nepal					
Kyanite (d)	0	1	0	—	—

Note(s)

(1) A number of other countries produce sillimanite minerals but details of output are not reported.

(2) In addition to the countries listed above as producing sillimanite minerals, synthetic mullite is believed to be produced in Brazil, Germany and Hungary.

(3) Production capacity for synthetic mullite also exists in China, India, Japan, the USA and the United Kingdom but output is believed to be zero.

(a) May include other sillimanite minerals

(b) Including related minerals

(c) Years ended 31 March following that stated

(d) Years ending 15 July of that stated

Ta content	1 700	1 200	1 400	1 600	1 500

Note(s)

- (1) Niobium and tantalum minerals are also believed to be produced in Namibia and South Africa.
- (2) The figures in this table refer to gross tonnage of tantalum and niobium concentrates, except where noted.
- (3) Tantalum is also recovered from tin slags and this is believed to have accounted for approximately 20% of raw material supplied.
- (4) The figures in this table include artisanal mining, where data are available.

- (a) Years ended 7 July of that stated
- (b) Years ended 30th June of that stated
- (c) Exports

Note(s)

- (1) The figures in this table refer to gross tonnage of titanium concentrates.
- (2) Some ilmenite is converted to synthetic rutile in Australia, India, Japan and USA.

- (a) Exports
- (b) Including natural rutile
- (c) It is believed that the majority of this is processed into slag
- (d) Canada produces some ilmenite which is sold as such and not processed into slag, but tonnages are small
- (e) Including synthetic rutile
- (f) Years ended 31 March following that stated
- (g) Years ended 30 June of that stated

Mine production of tungsten

tonnes (metal content)

Country	2018	2019	2020	2021	2022

Note(s)

(1) In this table the term 'zirconium minerals' is understood to mean zircon, unless otherwise stated.

- (a) Baddeleyite concentrate
- (b) Exports
- (c) Including caldasite rock containing zircon and baddeleyite
- (d) Years ending 31 March following that stated
- (e) Conservative BGS estimates, based on exports
- (f) Years ended 30 June of that stated

Note(s)

- (1) So far as possible, these production statistics include construction sand; gravel, pebbles, shingle and flint; crushed stone used for concrete aggregates, roadstone and other construction uses; granules, chippings and powders.
- (2) Where official sources show more than one series for aggregates the higher series has generally been used in this compilation.
- (3) Where marine sands and gravels have been identified, these are included.
- (4) Information may be incomplete or absent due to reporting methods, confidentiality or lack of available information.
- (5) Production from many small operations is not officially compiled. The minimum number of employees for which establishments are required to report production varies between different countries and can also vary from year to year within a country.
- (6) Quantities of sand from sand and gravel operations may be discarded due to low demand. This may or may not be included in the statistics.
 - (a) Sales
 - (b) Estimated by official source based on a previous year census and the rate of change observed from a sample of quarries in subsequent years
 - (c) Includes small quantities for other purposes in Northern Ireland
