ACKNOWLEDGEMENTS

The author would like to thank the Captain, Officers and ship's company of FS Poseidon for their help in the deployment of sea level equipment in the Denmark Strait.

OVERVIEW

The overflow of cold dense water from the Denmark Strait is one of the key elements of the north Atlantic thermohaline circulation and has important consequences for global climate change. It is important to measure the transport of this water and to understand its variability on seasonal and longer time scales.

The European funded project "Variability of Exchanges in Northern Seas" (VEINS) is an attempt to measure variations in the Arctic circulation using modern oceanographic instrumentation. Part of this work is in the Denmark Strait where an array of current meters is in place to measure the strength of the Overflow Water (DSOW). CTD surveys provide knowledge of the physical properties.

To measure the thickness of the DSOW, and hence get a value for transport, an Inverted Echo Sounder (IES) was deployed at the core of the current with a view to detecting the echo from the interface between the cold bottom water and the overlying intermediate layer.

POL CRUISE OBJECTIVES

- 1) To deploy a combined Bottom Pressure Recorder and Inverted Echo Sounder in the Denmark Strait.

IES/BPR DEPLOYMENT

Ship Preparation

POL personnel joined FS Poseidon at Reykjavik, Iceland on August 5, 1996. The equipment was loaded aboard the ship, unpacked and stowed safely. The Bottom Pressure Recorder was assembled, tested and set running. The Inverted Echo Sounder was opened, configured and the re-sealed. The frame was prepared, the ballast weight assembled and then the BPR and IES installed.

DEPLOYMENT OF IES/BPR (ICE1) 9/8/1996

EVENTS

09.00 GMT	Arrive on station.
09.09 GMT	Released into the water.
09.50 GMT	On the seabed.

Total time on station: 50 minutes.

IES/BPR Deployment Summary

Acoustic conditions were good, and the sea state calm. The IES/BPR was monitored to the seabed using both sets of acoustics and communication was excellent.

CONCLUSION

With this deployment the POL cruise objective was achieved.

APPENDIX 1 – IES/BPR TECHNICAL INFORMATION

DEPLOYMENT OF IES (ICE1) INFORMATION

<i>Location details</i>	-	<i>Latitude</i>	<i>63 °22.042' N</i>
		<i>Longitude</i>	<i>036 °04.369' W</i>
		<i>Depth</i>	<i>2180m</i>

On station	-	09.00 GMT on 9/8/1996
Released into the water	-	09.09 GMT
On seabed	-	09.50 GMT

The deployment went very smoothly with a calm sea. The IES was monitored to the seabed using both sets of acoustics and communication was excellent.

Acoustic Information	-	XT 6000 Acoustics S/N 46428 Rx 14.5 kHz, Tx 12.0 kHz, Release D
	-	XT6000 Acoustics S/N 46457 Rx 15.0 kHz, Tx 12.0 kHz, Release B
Radio Beacon	-	Novatek 154.585 MHz Channel A

The antenna screw thread on the radio beacon was damaged which meant that the antenna would not fully tighten. Self-amalgamating tape was wrapped around the thread to try and prevent the seawater from corroding the connection.

Logger	-	SSDL 5
--------	---	--------

Logger Information		
Sensors	-	DQ 36573 DQ 38175

Timebase Channels		
1	-	Temperature DQ 36573
2	-	Pressure
3	-	Temperature DQ 38175
4	-	Pressure

Sensor Frequencies		
DQ 36573	-	Temperature - 170.80 kHz

DQ 38175	-	Pressure	- 32.7 kHz
	-	Temperature	- 170.45 kHz
	-	Pressure	- 33.3 kHz

SSDL 5 timebase started at 14.30.00 GMT on 5/8/1996

First scan at 14.45.00 GMT on 5/8/1996

Battery Voltages

Logger	-	14.69 V
--------	---	---------

Logger Current

-	38.7 mA - powered up
	3.51 mA - sleep

IES Information

IES	-	Chirp IES with LDEO ADC Board
		Hard disk size 540Mb

The IES was powered up and the time set to 19.01.00 GMT on 5/8/1996

IES parameters

-	Chirp Interval	120 minutes
	Samples / Datafile	2
	Sampling Rate	Slow
	Lockout Time	0
	Start File	1
	Serial Number	10
	Deployment Number	2
	Comments	Greenland, August '96

First wakeup at 20.01.09 GMT

Second wakeup at 21.01.09 GMT

First Chirp at 21.01.28 GMT on 5/8/1996
