INTRODUCTION

Merlewood Research Station became part of the Institute of Terrestrial Ecology when the latter was formed at the end of 1973. This publication contains a record of the written work of the Station since that time.

The records are taken from the complete database of ITE Staff publications, and are arranged in three sections:

1. Publications in the 'open' literature;
2. Research and Development papers, produced mainly as discussion documents for limited circulation, but also available on request;
3. Contract reports, produced exclusively for customer organisations.

The list has been compiled by John Beckett, of ITE, and by Allan Nelson, of NERC Computing Service, who will be happy to supply information on the programming involved in storing and retrieving the references. The ITE database can be searched by author, title-words, date, location (or any combination of these); requests for searches should be made to either of the above, at Merlewood.
